

Factors That Affect Chemical Equilibrium

Chemical equilibrium is a very delicate system that represents a perfect balance between forward and reverse reaction. A small disturb in the equilibrium may shift the equilibrium position either to right forming more products or to left forming more reactants. This reaction by the system is of course temporary and eventually the system will come back to equilibrium. This phenomenon can be expressed in the form of Le Chatelier's Principle.

Le Chatelier's Principle

An important and very interesting qualitative principle governing the equilibrium is the principle of Le Chatelier. This principle, which is named after the French chemist Henry Louis Le Chatelier (1850-1936), may be stated as follows: *if an external stress is applied to a system at equilibrium, the system will tend to react in such way as to relieve the applied stress and tries to reestablish the equilibrium.* In chemical reaction terminology, the "stress" means change **in concentration, pressure, volume or temperature.**

Le Chatelier's principle can be understood either qualitatively or quantitatively doing some problems. However, we restrict ourselves only to qualitative explanation.

Change in Concentration

Consider the following equilibrium reaction

- (a). What happens if we increase the concentration of N_2 by adding more N_2 ?
- (b). What happens if we increase the concentration of H_2 by adding more H_2 ?
- (c). What happens if we increase the concentration of NH_3 by adding more NH_3 ?
- (d). What happens if we decrease the concentration of N_2 by removing some N_2 ?
- (e). What happens if we decrease the concentration of H_2 by removing some H_2 ?
- (f). What happens if we decrease the concentration of NH_3 by removing some NH_3 ?

Answer

- (a) and (b). The answers to question (a) and (b) are the same. If we add either N_2 or H_2 , we increase the collisions between N_2 and H_2 thereby forming more product NH_3 . This is how the equilibrium counteracts the applied stress; **we say the equilibrium shifts from left to right.**
- (c) If we add more NH_3 , we increase the concentration of NH_3 . As a result, some NH_3 decomposes and forms more reactants. **We say the equilibrium shifts from right to left.**
