Presents the fundamentals of cooperative communications and networking with a holistic approach to principal topics where improvements can be obtained Smart Grid Stephen F. Bush,2014-03-31 This book bridges the divide between the fields of power systems engineering and computer communication through the new field of power system information theory Written by an expert with vast experience in the field this book explores the smart grid from generation to consumption both as it is planned today and how it will evolve tomorrow The book focuses upon what differentiates the smart grid from the traditional power grid as it has been known for the last century Furthermore the author provides the reader with a fundamental understanding of both power systems and communication networking It shows the complexity and operational requirements of the evolving power grid the so called smart grid to the communication networking engineer and similarly it shows the complexity and operational requirements for communications to the power systems engineer The book is divided into three parts Part One discusses the basic operation of the electric power grid covering fundamental knowledge that is assumed in

Parts Two and Three Part Two introduces communications and networking which are critical enablers for the smart grid It also considers how communication and networking will evolve as technology develops This lays the foundation for Part Three which utilizes communication within the power grid Part Three draws heavily upon both the embedded intelligence within the power grid and current research anticipating how and where computational intelligence will be implemented within the smart grid Each part is divided into chapters and each chapter has a set of questions useful for exercising the readers understanding of the material in that chapter Key Features Bridges the gap between power systems and communications experts Addresses the smart grid from generation to consumption both as it is planned today and how it will likely evolve tomorrow Explores the smart grid from the perspective of traditional power systems as well as from communications Discusses power systems communications and machine learning that all define the smart grid It introduces the new field of power system information theory *Application of Visible Light Wireless Communication in Underground Mine* Simona Mirela Riurean, Monica Leba, Andreea Cristina Ionica, 2021-02-02 This book provides a chronological literature review of optical wireless communication followed by a detailed blueprint of a visible light communication VLC setup with the key characteristics of LEDs and photodetectors Next the optical channel impulse response and its description for different possible topologies is presented together with a description of the optical and electrical setup for both optical transmitters oTx and optical receivers oRx Different single carrier and multi carrier modulations particularly applied in visible light communication setups are also presented Both the optical and electrical modules of oTx and oRx are simulated and then prototyped and tested as embedded devices in an underground positioning and monitoring system for a continuous real time identification of the personnel on the main underground galleries where the illumination network is already installed Presents a comprehensive look at visible light communication technology both in description and application Shows where and how VLC has been launched on the market as an alternative or partner technology to the existing wireless communication technologies based on radio frequency Includes special focus on underground positioning and monitoring with embedded VLC Discrete-Time Linear Systems Guoxiang Gu, 2012-02-14 Discrete Time Linear Systems Theory and Design with Applications combines system theory and design in order to show the importance of system theory and its role in system design The book focuses on system theory including optimal state feedback and optimal state estimation and system design with applications to feedback control systems and wireless transceivers plus system identification and channel estimation
