Young Bilingual Learners At Home And School Researching Multilingual Voices:

Young Bilingual Learners at Home and School Rose Drury, 2007 Official documents on early education tend to gloss over the experience of children who are learning English as an additional language in generalized terms. Because their learning situation is not well understood, bilingual children may be given few opportunities to display their abilities at school. Based on the author's ethnographic study, this book examines the experiences of three four-year-old bilingual children as they begin school in three English nursery classes. It thus provides insights into young children's use of first languages as well as English and consequently provides a fuller and richer picture of bilingual children's learning. The book reveals some of the ways in which young bilingual children experience preschool as they begin to learn the language required for formal schooling. It demonstrates how they take control of their own learning at home. And it asks questions: How do Samia, Maria, and Nazma find their own way through preschool? What are their individual strategies for getting by and beyond that for learning during their first year of formal schooling? How do they syncretize home and school learning? The detailed picture that emerges will fill in the detail missing from the current over-generalized view of bilingual children in the early years and provide an important new perspective to a growing body of literature on young bilingual children. It will be essential reading for all teachers, early childhood practitioners, and early years policymakers operating in multilingual environments.

The Silent Experiences of Young Bilingual Learners Caroline Bligh, 2014-09-11 Many teachers are increasingly concerned with how to best support the learning of the rising numbers of bilingual learners in schools, particularly those children who are new to English and therefore cannot yet communicate with the teacher or their peers in their first language during the silent period. This book offers an alternative insight to that which is most commonly available to teachers and researchers: as instead of examining language acquisition purely from a linguistic approach, it explores the learning that is occurring through a sociocultural lens and even more significantly from the young child's perspective, the worm's-eye view. Investigated through the experiences of young bilingual learners, allows the reader to make sense of the making meaning that occurs when the child cannot make sense of his/her new world nor communicate verbally in the language of instruction in the classroom. Remarkably, learning through the silent period is revealed as both complex and messy as the bilingual child mediates his or her own learning through a synthesis of alternative learning pathways. The silent period is presented as a crucial time for learning, distributed through a synthesis of close observation, intense listening, and most significantly, copying the practices of others. Throughout the silent period, the children are not only seen to be learning but also contributing to the classroom practices. The book not only initiates new understandings of second language learning but also offers creative ideas on how to raise the achievement of children who are learning English as an additional language.
