Theory of Consciousness Bernard J. Baars,1993-07-30 Bernard Baars suggests a way to specify empirical constraints on a theory of consciousness by contrasting well established conscious phenomena with comparable unconscious ones such as stimulus representations known to be preperceptual unattended or habituated By adducing data to show that consciousness is associated with a kind of workplace in the nervous system Baars helps clarify the problem Ten Problems of

Consciousness Michael Tye,1997-01-22 Can neurophysiology ever reveal to us what it is like to smell a skunk or to experience pain In what does the feeling of happiness consist How is it that changes in the white and gray matter composing our brains generate subjective sensations and feelings These are several of the questions that Michael Tye addresses while formulating a new and enlightening theory about the phenomenal what it feels like aspect of consciousness The test of any such theory according to Tye lies in how well it handles ten critical problems of consciousness Tye argues that all experiences and all feelings represent things and that their phenomenal aspects are to be understood in terms of what they represent He develops this representational approach to consciousness in detail with great ingenuity and originality In the book s first part Tye lays out the domain the ten problems and an associated paradox along with all the theories currently available and the difficulties they face In part two he develops his intentionalist approach to consciousness Special summaries are provided in boxes and the ten problems are illustrated with cartoons A Bradford Book Representation and Mind series *Cognitive Systematization* Nicholas Rescher,1979 **Theories of Consciousness** William Seager,1999

Theories of Consciousness serves both to introduce a wide array of approaches to consciousness as well as advance debate via a detailed critique of them Philosophy students researchers with a particular interest in cognitive science and anyone who has wondered how consciousness fits into a scientific view of the world will find this book an illuminating and fascinating read *Consciousness and Self-Consciousness* Rocco J. Gennaro,1996-03-20 This interdisciplinary work contains the most

sustained attempt at developing and defending one of the few genuine theories of consciousness Following the lead of David Rosenthal the author argues for the so called higher order thought theory of consciousness This theory holds that what makes a mental state conscious is the presence of a suitable higher order thought directed at the mental state In addition the somewhat controversial claim that consciousness entails self consciousness is vigorously defended The approach is mostly analytic in style and draws on important recent work in cognitive science perception artificial intelligence neuropsychology and psychopathology However the book also makes extensive use of numerous Kantian insights in arguing for its main theses and in turn sheds historical light on Kant's theory of mind A detailed analysis of the relationships between self consciousness behavior memory intentionality and de se attitudes are examples of the central topics to be found in this work Series A

The Conscious Mind David J. Chalmers, 1996-05-09 What is consciousness How do physical processes in the brain give rise to the self aware mind and to feelings as profoundly varied as love or hate aesthetic pleasure or spiritual yearning These questions today are among the most hotly debated issues among scientists and philosophers and we have seen in recent years superb volumes by such eminent figures as Francis Crick Daniel C Dennett Gerald Edelman and Roger Penrose all firing volleys in what has come to be called the consciousness wars Now in *The Conscious Mind* philosopher David J Chalmers offers a cogent analysis of this heated debate as he unveils a major new theory of consciousness one that rejects the prevailing reductionist trend of science while offering provocative insights into the relationship between mind and brain Writing in a rigorous thought provoking style the author takes us on a far reaching tour through the philosophical ramifications of consciousness Chalmers convincingly reveals how contemporary cognitive science and neurobiology have failed to explain how and why mental events emerge from physiological occurrences in the brain He proposes instead that conscious experience must be understood in an entirely new light as an irreducible entity similar to such physical properties as time mass and space that exists at a fundamental level and cannot be understood as the sum of its parts And after suggesting some intriguing possibilities about the structure and laws of conscious experience he details how his unique reinterpretation of the mind could be the focus of a new science Throughout the book Chalmers provides fascinating thought experiments that trenchantly illustrate his ideas For example in exploring the notion that consciousness could be experienced by machines as well as humans Chalmers asks us to imagine a thinking brain in which neurons are slowly replaced by silicon chips that precisely duplicate their functions as the neurons are replaced will consciousness gradually fade away The book also features thoughtful discussions of how the author's theories might be practically applied to subjects as diverse as artificial intelligence and the interpretation of quantum mechanics All of us have pondered the nature and meaning of consciousness Engaging and penetrating *The Conscious Mind* adds a fresh new perspective to the subject that is sure to spark debate about our understanding of the mind for years to come

The Consciousness Paradox Rocco J. Gennaro, 2011-11-18 A defense of a version of the higher order thought HOT theory of consciousness with special attention to

such topics as concepts and animal consciousness Consciousness is arguably the most important area within contemporary philosophy of mind and perhaps the most puzzling aspect of the world Despite an explosion of research from philosophers psychologists and scientists attempts to explain consciousness in neurophysiological or even cognitive terms are often met with great resistance In *The Consciousness Paradox* Rocco Gennaro aims to solve an underlying paradox namely how it is possible to hold a number of seemingly inconsistent views including higher order thought HOT theory conceptualism infant and animal consciousness concept acquisition and what he calls the HOT brain thesis He defends and further develops a metapsychological reductive representational theory of consciousness and applies it to several importantly related problems Gennaro proposes a version of the HOT theory of consciousness that he calls the wide intrinsicality view and shows why it is superior to various alternatives such as self representationalism and first order representationalism HOT theory says that what makes a mental state conscious is that a suitable higher order thought is directed at that mental state Thus Gennaro argues for an overall philosophical theory of consciousness while applying it to other significant issues not usually addressed in the philosophical literature on consciousness Most cognitive science and empirical works on such topics as concepts and animal consciousness do not address central philosophical theories of consciousness Gennaro's integration of empirical and philosophical concerns will make his argument of interest to both philosophers and nonphilosophers

Theories of Consciousness William Seager, 2002-01-31 The most remarkable fact about the universe is that certain parts of it are conscious Somehow nature has managed to pull the rabbit of experience out of a hat made of mere matter Making its own contribution to the current lively debate about the nature of consciousness *Theories of Consciousness* introduces variety of approaches to consciousness and explores to what extent scientific understanding of consciousness is possible Including discussion of key figures such as Descartes Fodor Dennett and Chalmers the book covers identity theories representational theories intentionality externalism and the new information based theories

Content and Consciousness Revisited

Carlos Muñoz-Suárez, Felipe De Brigard, 2016-10-15 What are the grounds for the distinction between the mental and the physical What is the relation between ascribing mental states to an organism and understanding its behavior Are animals and complex systems vehicles of inner evolutionary environments Is there a difference between personal and sub personal level processes in the brain Answers to these and other questions were developed in Daniel Dennett's first book *Content and Consciousness* 1969 where he sketched a unified theoretical framework for views that are now considered foundational in cognitive science and philosophy of mind *Content and Consciousness Revisited* is devoted to reconsider the ideas and ideals introduced in Dennett's seminal book by covering its fundamental concepts hypotheses and approaches and taking into account the findings and progress which have taken place during more than four decades This book includes original and critical contributions about the relations between science and philosophy the personal sub personal level distinction intelligence learning intentionality rationality propositional attitudes among other issues of scientific and philosophical

interest Each chapter embraces an updated approach to several disciplines like cognitive science cognitive psychology philosophy of mind and cognitive psychiatry

Actual Consciousness Ted Honderich, 2014-07-10 What is it for you to be conscious There is no agreement whatever in philosophy or science it has remained a hard problem a mystery Is this partly or mainly owed to the existing theories not even having the same subject not answering the same question In *Actual Consciousness* Ted Honderich sets out to supersede dualisms objective physicalisms abstract functionalism externalisms and other positions in the debate He argues that the theory of Actualism right or wrong is unprecedented in nine ways 1 It begins from gathered data and proceeds to an adequate initial clarification of consciousness in the primary ordinary sense This consciousness is summed up as something's being actual 2 Like basic science Actualism proceeds from this metaphorical or figurative beginning to what is wholly literal and explicit constructed answers to the questions of what is actual and what it is for it to be actual 3 In so doing the theory respects the differences of consciousness within perception consciousness that is thinking in a generic sense and consciousness that is generic wanting 4 What is actual with your perceptual consciousness is a subjective physical world out there very likely a room differently real from the objective physical world that other division of the physical world 5 What it is for the myriad subjective physical worlds to be actual is for them to be subjectively physical which is exhaustively characterized 6 What is actual with cognitive and affective consciousness is affirmed or valued representations The representations being actual which is essential to their nature is their being differently subjectively physical from the subjective physical worlds 7 Actualism naturally enough when you think of it but unlike any other existing general theory of consciousness is thus externalist with perceptual consciousness but internalist with respect to cognitive and affective consciousness 8 It satisfies rigorous criteria got from examination of the failures of the existing theories In particular it explains the role of subjectivity in thinking about consciousness including a special subjectivity that is individuality 9 Philosophers and scientists have regularly said that thinking about consciousness requires just giving up the old stuff and starting again Actualism does this Science is served by this main line philosophy which is concentration on the logic of ordinary intelligence clarity consistency and validity completeness generality

Phenomenal Consciousness Peter Carruthers, 2003-10-30 How can phenomenal consciousness exist as an integral part of a physical universe How can the technicolour phenomenology of our inner lives be created out of the complex neural activities of our brains Many have despaired of finding answers to these questions and many have claimed that human consciousness is inherently mysterious Peter Carruthers argues on the contrary that the subjective feel of our experience is fully explicable in naturalistic scientifically acceptable terms Drawing on a variety of interdisciplinary resources he develops and defends a novel account in terms of higher order thought He shows that this can explain away some of the more extravagant claims made about phenomenal consciousness while substantively explaining the key subjectivity of our experience Written with characteristic clarity and directness and surveying a wide range of extant theories this book is essential reading for all those within

philosophy and psychology interested in the problem of consciousness Consciousness Peter Carruthers, 2005-05-26 Peter Carruthers's essays on consciousness and related issues have had a substantial impact on the field and many of his best are now collected here in revised form. The first half of the volume is devoted to developing, elaborating, and defending against competitors one particular sort of reductive explanation of phenomenal consciousness which Carruthers now refers to as dual content theory. Phenomenal consciousness, the feel of experience, is supposed to constitute the hard problem for a scientific world view, and many have claimed that it is an irredeemable mystery. But Carruthers here claims to have explained it. He argues that phenomenally conscious states are ones that possess both an analog, fine-grained intentional content and a corresponding higher-order analog content representing the first-order content of the experience. It is the higher-order analog content that enables our phenomenally conscious experiences to present themselves to us and that constitutes their distinctive subjective aspect or feel. The next two chapters explore some of the differences between conscious experience and conscious thought and argue for the plausibility of some kind of eliminativism about conscious thinking while retaining realism about phenomenal consciousness. Then the final four chapters focus on the minds of non-human animals. Carruthers argues that even if the experiences of animals aren't phenomenally conscious as his account probably implies, this needn't prevent the frustrations and sufferings of animals from being appropriate objects of sympathy and concern. Nor need it mean that there is any sort of radical Cartesian divide between our minds and theirs of deep significance for comparative psychology. In the final chapter, he argues provocatively that even insects have minds that include a belief-desire-perception psychology much like our own. So mindedness and phenomenal consciousness couldn't be further apart. Carruthers's writing throughout is distinctively clear and direct. The collection will be of great interest to anyone working in philosophy of mind or cognitive science.

The Crucible of Consciousness Zoltan Torey, 2009 **The Way We Think** Gilles Fauconnier, Mark Turner, 2003-03-18 Conceptual blending, say Fauconnier (cognitive science, U of California, San Diego) and Turner (behavioral sciences, U of Maryland), is a great mental capacity that in its most advanced double-scope form gave human ancestors superiority and allowed them to develop art, science, religion, culture, sophisticated tools, and language. They investigate its principles, dynamics, and role in human life. Annotation copyrighted by Book News, Inc., Portland, OR
