Human Brain and Spinal Cord Tumors: From Bench to Bedside. Volume 1 Nima Rezaei, Sara Hanaei, 2023-01-01 Brain tumors comprise about 5.9% of all human neoplasms and interestingly the central nervous system (CNS) neoplasms are ranked among the most prevalent neoplasms of childhood as well Besides to the morphologic and histopathologic characteristics and as each pathologic state first starts with molecular alterations each tumor may have its own story in the matter of activating tumorigenesis pathways and having specific molecular characteristics Importantly the molecular classification of tumors has been highly considered in the past few decades for taking the most appropriate therapeutic approach On the other hand the tumors shall have tumor escape mechanisms preventing the immunologic system to eliminate its invasion The failure of innate and acquired immune system to defeat tumorigenesis mechanisms would consequently result in tumor development Interestingly the neuro immunologic mechanism plays a role in development of psychiatric manifestations of brain tumors as well Taking all these to account the different arms of innate immunity acquired immunity and genetics have been approached to defeat development and or progression of such tumors Accordingly the activation immunotherapeutic approaches focus on activating or strengthening the anti tumor immunologic pathways in order to assist the weakened immune system to defeat the tumor such as Dendritic cell vaccination DNA vaccines peptide vaccines viral vector based vaccines monoclonal antibodies and CAR T cell therapy In addition to immunologic components of brain and spinal cord tumors numerous genes and genetic pathways have been recognized to take part in tumorigenesis Taking these non immune genetic pathways to account some other therapeutic approaches such as stem cell therapy and gene therapy have been developed in the new era of cancer treatment Moreover and besides the biologic and medical aspects of these tumors different physical mathematical models have been proposed to either explain or predict tumor

behavior Such models would be advantageous in developing new therapeutic modalities in pre clinical stages and enter new eras in cancer treatment The first book of Human Brain and Spinal Cord Tumors Neuro immunology and Neuro genetics will mainly discuss the neuro immunology and neurogenetic pathways associated with development of brain and spinal cord tumor After a short introduction chapter this book will focus on the role of innate and acquired immunity on development of these tumors and then the immunotherapeutic approaches to defeat these tumorigenesis mechanisms This book will then focus on genetic aspects of brain and spinal cord tumors and bioinformatics models to describe the behavioral patterns of these tumors as well as associated therapeutic approaches such as stem cell therapy and gene therapy This volume of book could be useful for experts in basic sciences mainly geneticists and immunologists and also physicians of different specialties mainly neurosurgeons neurologists neuropathologists and neuroradiologists Journal of the National Cancer Institute, 2002-03 Brain Tumors E-Book Andrew H.
