The Vital Question By Nick Lane:

The Vital Question Nick Lane, 2016 A game changing book on the origins of life called the most important scientific discovery since the Copernican revolution in *The Observer*

Vital Question Nick Lane, 2015-07-13 One of the deepest most illuminating books about the history of life to have been published in recent years *The Economist* The Earth teems with life in its oceans forests skies and cities Yet there s a black hole at the heart of biology We do not know why complex life is the way it is or for that matter how life first began In *The Vital Question* award winning author and biochemist Nick Lane radically reframes evolutionary history putting forward a solution to conundrums that have puzzled generations of scientists For two and a half billion years from the very origins of life single celled organisms such as bacteria evolved without changing their basic form Then on just one occasion in four billion years they made the jump to complexity All complex life from mushrooms to man shares puzzling features such as sex which are unknown in bacteria How and why did this radical transformation happen The answer Lane argues lies in energy all life on Earth lives off a voltage with the strength of a lightning bolt Building on the pillars of evolutionary theory Lane s hypothesis draws on cutting edge research into the link between energy and cell biology in order to deliver a compelling account of evolution from the very origins of life to the emergence of multicellular organisms while offering deep insights into our own lives and deaths Both rigorous and enchanting *The Vital Question* provides a solution to life s vital question why are we as we are and indeed why are we here at all

The Vital Question Nick Lane, 2015 A biochemist building on the pillars of evolutionary theory and drawing on cutting edge research into the link between energy and genes argues that the evolution of multicellular life was the result of a single event

The Technique of Thought Ian James, 2019-02-26 Interrogating the work of four contemporary French philosophers to rethink philosophy s relationship to science and science s relationship to reality *The Technique of Thought* explores the relationship between philosophy and science as articulated in the work of four contemporary French thinkers Jean Luc Nancy Fran ois Laruelle Catherine Malabou and Bernard Stiegler Situating their writings within both contemporary scientific debates and the philosophy of science Ian James elaborates a philosophical naturalism that is notably distinct from the Anglo American tradition The naturalism James proposes also diverges decisively from the ways in which continental philosophy has previously engaged with the sciences He explores the technical procedures and discursive methods used by each of the four thinkers as distinct techniques of thought that approach scientific understanding and knowledge experimentally Moving beyond debates about the constructed nature of scientific knowledge *The Technique of Thought* argues for a strong variably configured and entirely novel scientific realism By bringing together post phenomenological perspectives concerning individual or collective consciousness and first person qualitative experience with science s focus on objective and third person quantitative knowledge James tracks the emergence of a new image of the sciences and of scientific practice Stripped of aspirations toward total mastery of the universe or a grand theory of everything this renewed

scientific worldview along with the simultaneous reconfiguration of philosophy's relationship to science opens up new ways of interrogating immanent reality

Language in Deep Human History Richard J. Watts, 2024-02-19 Understanding the evolution of language within the context of deep human history requires interdisciplinary work between linguists and scientists from a wide range of academic disciplines e.g. archaeology molecular biology anthropology genetics biochemistry etc The book aims to calibrate work on human evolution with current linguistic theory in an attempt to trace out a scientific story of how human language emerged and developed that has plausibility while remaining open to change through new linguistic and non linguistic research

The Genesis Quest Michael Marshall, 2020-11-20 A science journalist focuses on the chemical research into life's origins A fascinating and challenging story leavened with mini biographies Tim Flannery New York Review of Books From the primordial soup to meteorite impact zones the Manhattan Project to the latest research this book is the first full history of the scientists who strive to explain the genesis of life How did life begin Why are we here These are some of the most profound questions we can ask For almost a century a small band of eccentric scientists has struggled to answer these questions and explain one of the greatest mysteries of all how and why life began on Earth There are many different proposals and each idea has attracted passionate believers who promote it with an almost religious fervor as well as detractors who reject it with equal passion But the quest to unravel life's genesis is not just a story of big ideas It is also a compelling human story rich in personalities conflicts and surprising twists and turns Along the way the journey takes in some of the greatest discoveries in modern biology from evolution and cells to DNA and life's family tree It is also a search whose end may finally be in sight In *The Genesis Quest* Michael Marshall shows how the quest to understand life's beginning is also a journey to discover the true nature of life and by extension our place in the universe As lively in its telling as its subject is thought provoking The Well read Naturalist An historical review of the search for the origin of life an approachable introduction and also offers an interesting window on the lives of the scientists involved Recommended Choice

Against Atheism Oscar Priyanand, 2019-03-18 Historically atheism has always been lame and puerile but this new kid in the block called militant atheism uses science and evolution as its twin crutches to rationalize its worldview To the extent that all their books and web sites are more about science its methodology or its progress rather than about atheism itself Their strident smart talk and rational pretensions has a following whose numbers are unfortunately increasing Aided by vitriolic debates and books of Richard Dawkins Daniel Dennett and Sam Harris they are becoming more vocal by the day *Against Atheism* is a concise and devastating rebuttal to militant atheism This book takes a radically new approach in Christian apologetics by critically examining their arguments and exposing their scientific and rational pretensions By doing that one can clearly see the poverty of their worldview and the glaring contradictions within it

Niche Construction John Odling-Smee, 2024-09-03 How niche construction theory extends evolutionary theory beyond natural selection to a more general theory about the coevolution of organisms with their environments In *Niche Construction* John Odling-Smee the leading authority on niche construction theory extends evolutionary theory from an explanation of how populations of organisms respond to natural selection pressures in their environments to a more general theory about the coevolution of organisms with their environments Organisms he shows cause changes in their local external environments by interacting

with them thereby contributing in fundamental ways to their own and one another's evolution This book applies niche construction theory to current problems such as human induced global warming and suggests how humans might contribute positively to the future evolution of life on Earth Odling Smee explains how orthodox evolutionary theory falls short in two ways First it does not describe how organisms contribute to their own and one another's evolution through their environment changing niche constructing activities Second it fails to explain how genetic evolution can give rise to supplementary knowledge gaining processes in many species These include certain developmental processes in individual organisms and socio cultural processes in animals including humans Neo Darwinism the author writes assesses the fitness of individual organisms in populations in terms of their capacity to survive and reproduce but without attributing these capacities to the active purposeful agency of organisms He argues that the purposeful agency of individual organisms plays a central role in evolution He also discusses the relationship of an organism's energy consuming activities and the second law of thermodynamics

How Science Works: Evolution John Ellis, 2016-07-09 Evolution is just a theory isn't it What is a scientific theory anyway Don't scientists prove things What is the difference between a fact a hypothesis and a theory in science How does scientific thinking differ from religious thinking Why are most leading scientists atheists Are science and religion compatible Why are there so many different religious beliefs but only one science What is the evidence for evolution Why does evolution occur If you are interested in any of these questions and have some knowledge of biology this book is for you

Political Creativity Sakari Hänninen, 2024-01-18 For several decades Antonio Gramsci has been one of the most studied and discussed political theorists however his originality as a political thinker has not yet been fully understood In this incisive book Sakari Hänninen explores Gramsci's political theory of transformation and posits that he was altogether too creative a thinker to be simply categorized as an adherent of a certain school of thought or tradition

Why Are We Here? Bruce Brodie, 2019-05-24 From the big bang to the origin and evolution of intelligent life in a search for the meaning of human existence Why are We Here by author Bruce Brodie offers a look at evolution and the future of life on the planet Through many years of research and study Brodie addresses a host of questions How did chemistry come to life How did the release of oxygen by cyanobacteria change the natural history of life How did mass extinctions reset the clock and reshape the course of biological evolution Why are homo

sapiens so dominant Why do humans build vast civilizations while chimps with whom we share more than 98 percent of our DNA are confined to forests and experimental laboratories and zoos How will cultural and technological evolution which have transcended the slow pace of biological evolution shape the future of life on the planet Can we escape the many existential threats that hover over us Why are We Here offers a new perspective on how we think about the world and our place and our purpose in the universe and the future of humanity It presents a lasting sense of the amazing wonder and mystery of life

Gareth Wyn

Jones, 2019-10-15 1 Energy the Great Driver takes a very broad perspective on life both in relation to time span 4 billion years and subject areas disciplines The latter range from physics through biology to anthropology agricultural science sociology and behavioural psychology to economics 2 The book seeks to explore common cross disciplinary threads and the integration of our understanding not its atomization Jones suggests some threads which run through biological and human history over the millennia and narrative which underpins much of planetary life 3 It reinforces the importance of the seven revolution i e energising human society while drastically reducing greenhouse gas emissions But it offers a new perspective on our reluctance to do so 4 Although many of the conclusions appear gloomy the book asserts that a recognition of the underlying problems and trends is the beginning of wisdom and a new relationship with energy can enhance human well being and our interaction with the rest of the natural world **A Human Creation** W.R. Frederick, 2019-02-01 A Human Creation

challenges god belief under several disciplines History shows that humanity s need for the supernatural is rooted in the ancient past and that subsequent religious scriptures are poor proof of any god s existence wrought with myth fabrication and textual error Evolution is supported by the evidence not a divine intervention or design The brain your mind can make you a believer and society culture and power politics can enforce belief The physics of the universe show that there is no need for a god to arrive at today s reality while life s existence was a natural certainty All of this means that humans

fabricated their gods to satisfy their needs and fears

Rethinking Evolution: The Revolution That's Hiding In Plain

Sight Gene Levinson, 2019-10-17 Rethinking Evolution links Darwin's early insights to the molecular realm inside living cells. This updated evolutionary synthesis provides an accessible explanation for biological complexity that cuts through the confusion surrounding evolutionary theory in a practical way. In addition to a wide-ranging survey of proposed updates to the modern synthesis, this title provides extraordinary new insights including emergent evolutionary potential and the generative phenotype. Drawing on well-characterized empirical facts, Rethinking Evolution transcends classical Darwinian natural selection while retaining those core principles that have stood the test of time. The updated synthesis brings a broad spectrum of specialized research together to provide a more plausible naturalistic explanation for biological evolution than ever before. Perspectives ranging from the role of energy in the origin of life to the networks of protein-DNA interactions that govern multicellular development are woven together in a robust conceptual fabric consistent with 21st-century cutting-edge research. Inspired in part by the surprising ways that DNA sequences change, such as his early discovery of a fundamental mispairing mechanism by which DNA sequences expand, and drawing on a career's worth of experience both as a research scientist as well as a biology and chemistry tutor, the author provides an engaging account that is essential reading both for the public awareness and understanding of the science of evolution and for students and professionals in the biomedical sciences.
