Tappia, Heather Blewett, 2020-06-17 There is unequivocal experimental epidemiological and clinical evidence demonstrating a correlation between diet and increased risk of cardiovascular disease CVD While nutritionally poor diets can have a significant negative impact on cardiovascular health dietary interventions with specific nutrients and or functional foods are considered cost effective and efficient components of prevention strategies It has been estimated that nutritional factors may be responsible for approximately 40% of all CVD Indeed in one of the seminal studies conducted on modifiable risk factors and heart health the INTERHEART study 90% of all myocardial infarctions were attributed to preventable environmental factors with nutrition identified as one of the important determinants of CVD There is an increasing public interest in and

scientific investigation into establishing dietary approaches that can be undertaken for the prevention and treatment of CVD This Special Issue provides an insight into the influential role of nutrition and dietary habits on cardiovascular health and disease as well as their mechanisms of therapeutic and preventive action **Tuberculosis Vaccines** Paulo J.G.

Immunopathogenesis and Immune-based Therapy for Selected Autoimmune Disorders Mourad Aribi,2017-03-22 The book Immunopathogenesis and Immune Based Therapy for Selected Autoimmune Disorders is a synthesis work that discusses two main aspects of autoimmunity Immunopathogenesis and therapeutic approaches essentially based on the immunotherapies This book deals with different topics on a number of autoimmune disorders including type 1 diabetes autoimmune cardiomyopathy autoimmunity of gastrointestinal tract systemic sclerosis and myasthenia gravis This book will be useful to clinicians biologists researchers teachers and students who are interested in immunology and immunopathology *The Neuropathogenesis of Mood Disorders* Anthony John McClelland,2024-09-23 Neurology does not include study of the limbic system as this is regarded as more relevant to psychiatry Paradoxically psychiatrists receive no education on the anatomy physiology or neuropathology of the limbic system either during their specialist training programs internationally Their focus

is purely on the diagnosis and treatment of mental illness Thus they are unique among the medical specialities in the 21st century The morbidity and mortality of the many millions of patients with mood disorders has remained unchanged for multiple decades as opposed to the progressive advances made in all other medical specialities This is a travesty and a tragedy for a medical specialist discipline Accordingly using advances in immunology radiology and my own personal insights and after considerable research I have discovered the complex neuropathogenesis of mood disorders and how to substantially improve the treatment regimen in order to substantially improve patient outcomes A detailed comprehensive description of the anatomy physiology the neuropathology of the limbic system and the underlying etiology of mood disorders are described in this book It is likely that a team approach using a psychiatrist and an immunologist will be required for patients with bipolar 2 and treatment resistant depression as the use of biological agents are complex and require considerable experience **Primary Immunodeficiencies Worldwide** Menno C. van Zelm, Antonio
