Western North American Juniperus Communities A Dynamic Vegetation Type Ecological Studies:

Western North American Juniperus Communities Oscar van Auken, 2007-12-04 In North America Juniperus woodlands occupy approximately 55 million hectares an area larger than the state of Texas Various species of Juniperus have been increasing in density and are expanding into associated grasslands reducing the size of the grasslands The reason for the Juniperus expansion is highly debated but has important implications for global change and fire regime studies Western North American Juniperus Communities addresses various aspects of the biology ecology and management of Juniperus woodlands and savannas by synthesizing past current and proposed future research The book will provide professionals with a solid background in Juniperus ecosystems enabling them to manage the communities for maximum sustained productivity and diversity Although the book focuses on Juniperus communities in North America a discussion of other regions and larger research implications is included as well *Ecology of Plant Communities of South-Central Texas* O. W. Van

Auken, 2018-07-16 This book is mostly about the plant communities of a very large area in south central Texas called the Edwards Plateau where a number of plant communities come together This area is a physiographic region and a confluence of many divergent and discontinuous communities Many of the plant communities in this area have never been described and nothing is published about them and I plan to rectify this Work on the species and communities of this area are scattered throughout the literature I plan to bring this work together in one place Much of what has been said in the past about this large general region of Texas is hearsay or speculation and much is incorrect and will be corrected here Communities and factors responsible for allowing the communities to develop and persist will be examined including species present light levels herbivory fire frequency availability of soil water and soil nutrients The limits of plant species and communities in this area are difficult to understand including why a community is located where it is and what caused it to be there how it interacts with other communities and the factors or condition that control the distribution and how the communities interact will be carefully examined and explained in light of recent research Cabi Invasives Thomas A. Monaco, 2012-01-01

Bringing together ecology and management of invasive plants within natural and agricultural ecosystems this book bridges the knowledge gap between the processes operating within ecosystems and the practices used to prevent contain control and eradicate invasive plant species The book targets key processes that can be managed the impact of invasive plants on these ecosystem processes and illustrates how adopting ecologically based principles can influence the ecosystem and lead to effective land management It is suitable for researchers practitioners and students of ecology invasive spe *The Continental-Scale Greenhouse Gas Balance of Europe* Han Dolman, Riccardo Valentini, A. Freibauer, 2008-06-06 The human interference with the climate system the perturbation of the carbon cycle through massive release of greenhouse gases caused by fossil fuel burning and land use change is threatening society and represents a key challenge for research and policies in the twenty first century Growing evidence of hum induced climate change has raised public concern calling for

urgent international policy actions. Initiatives culminated in the establishment of the United Nations Framework Convention for Climate Change UNFCCC and the Kyoto Protocol 1997 where Parties for the first time agreed on legally binding commitments to reduce greenhouse gas emissions. It is worth noting that the unfinished sink business the Articles in the Kyoto Protocol dealing with terrestrial biospheric carbon dioxide sources and sinks gave carbon cycle research a real boost. In the 1990s the regional carbon balance and how the different ecosystems contribute at different timescales under different environmental conditions were hardly known. During the fourth Framework Programme 1994-1998 the European Union supported more than 20 research projects studying the components of the carbon cycle. These projects provided a solid basis for a more integrated attempt to tackle the research challenges and demands imposed by the Kyoto Protocol at European scale. Both the European Commission and the scientific community felt that it was time to develop an integrated carbon cycle research programme taking the new challenges on board. *Marine Hard Bottom Communities* Martin Wahl, 2009-06-22

Marine hard bottoms feature some of the most spectacular and diverse biological communities on this planet. These not only contain a rich treasure of genetic taxonomic and functional information but also deliver irreplaceable ecosystem services. At the same time they are highly vulnerable and increasingly threatened by anthropogenic pressures. This volume has collected contributions by 50 scientists from numerous biogeographic regions dealing with characteristics of hard bottom communities. Distributional patterns in space and time are described followed by analyses of the intrinsic and extrinsic dynamics producing these patterns. A strong emphasis is placed on the ongoing changes occurring in the structure and diversity of these communities in response to spiralling environmental impacts and on state of the art countermeasures aiming to preserve these ecological treasures. Finally various values of diversity are assessed hopefully as an incentive for enhanced conservation efforts. *Wild Rangelands* Johan T. du Toit, Richard Kock, James Deutsch, 2012-11-06. Rangeland ecosystems which include unimproved grasslands shrublands savannas and semi deserts support half of the world's livestock while also providing habitats for some of the most charismatic of wildlife species. This book examines the pressures on rangeland ecosystems worldwide from human land use over hunting and subsistence and commercial farming of livestock and crops. Leading experts have pooled their experiences from all continents to cover the ecological sociological political veterinary and economic aspects of rangeland management today. This book provides practitioners and students of rangeland management and wildland conservation with a diversity of perspectives on a central question: can rangelands be wildlands? The first book to examine rangelands from a conservation perspective. Emphasizes the balance between the needs of people and livestock and wildlife. Written by an international team of experts covering all geographical regions. Examines ecological sociological political veterinary and economic aspects of rangeland management and wildland conservation providing a diversity of perspectives not seen before in a single volume. *The Landscape Ecology of Fire* Donald McKenzie, Carol Miller, Donald A. Falk, 2011-01-04. Global warming is expected to change fire regimes likely increasing the severity and extent of wildfires in

many ecosystems around the world What will be the landscape scale effects of these altered fire regimes Within what theoretical contexts can we accurately assess these effects We explore the possible effects of altered fire regimes on landscape patch dynamics dominant species tree shrub or herbaceous and succession sensitive and invasive plant and animal species and communities and ecosystem function Ultimately we must consider the human dimension what are the policy and management implications of increased fire disturbance and what are the implications for human communities

Rangeland Systems David D. Briske,2017-04-12 This book is open access under a CC BY NC 2 5 license This book provides an unprecedented synthesis of the current status of scientific and management knowledge regarding global rangelands and the major challenges that confront them It has been organized around three major themes The first summarizes the conceptual advances that have occurred in the rangeland profession The second addresses the implications of these conceptual advances to management and policy The third assesses several major challenges confronting global rangelands in the 21st century This book will compliment applied range management textbooks by describing the conceptual foundation on which the rangeland profession is based It has been written to be accessible to a broad audience including ecosystem managers educators students and policy makers The content is founded on the collective experience knowledge and commitment of 80 authors who have worked in rangelands throughout the world Their collective contributions indicate that a more comprehensive framework is necessary to address the complex challenges confronting global rangelands Rangelands represent adaptive social ecological systems in which societal values organizations and capacities are of equal importance to and interact with those of ecological processes A more comprehensive framework for rangeland systems may enable management agencies and educational research and policy making organizations to more effectively assess complex problems and develop appropriate solutions
