Urban Sustainability Through Environmental Design Kevin Thwaites, Sergio Porta, Ombretta Romice, Mark

Greaves, 2007-12-06 What can architects landscape architects and urban designers do to make urban open spaces streets and squares more responsive lively and safe Urban Sustainability through Environmental Design answers this question by providing the analytical tools and practical methodologies that can be employed for sustainable solutions to the design and management of urban environments The book calls into question the capability of quick fix development solutions to provide the establishment of fixed communities and suggests a more time conscious and evolutionary approach This is the first significant book to draw together a pan European view on sustainable urban design with a specific focus on social sustainability It presents an innovative approach that focuses on the tools of urban analysis rather than the interventions themselves With its practical approach and wide ranging discussion this book will appeal to all those involved in producing communities and spaces for sustainable living from students to academics through to decision makers and professional leaders

Socially Restorative Urbanism Kevin Thwaites, Alice Mathers, Ian Simkins, 2013-08-22 The need for a human orientated approach to urbanism is well understood and yet all too often this dimension remains lacking in urban design In this book the authors argue for and develop socially restorative urbanism a new conceptual framework laying the foundations for innovative ways of thinking about the relationship between the urban spatial structure and social processes to re introduce a more explicit people centred element into urban place making and its adaptation Focusing on this interplay between humans and the built environment two new concepts are developed the transitional edge a socio spatial concept of the urban realm and Experiemics a participative process that acts to redress imbalances in territorial

relationships defined in terms of the awareness of mine theirs ours and yours MTOY In this way Socially Restorative Urbanism shows how professional practice and community understanding can be brought together in a mutually interdependent and practical way Its theoretical and practical principles are applicable across a wide range of contexts concerning human benefit through urban environmental change and experience and it will be of interest to readers in the social sciences and environmental psychology as well as the spatial planning and design disciplines Sustainable Urbanism in China Ali Cheshmehzangi, Ayotunde Dawodu, Ayyoob Sharifi, 2021-08-16 Sustainable Urbanism in China explores the notion of Sustainable Urbanism by considering the role sustainable neighborhood planning plays in the larger picture of sustainable urbanism and suggests innovations and best practices that are either developed or adopted by China These are narrated as lessons learnt for other countries where we see similar trends of development patterns or emerging practices Through various explorations of challenges paradigms and innovations of urban sustainability this book highlights how planning policy and design are forming and reforming in the context of China These are offered through a set of guidelines and pathways for urban sustainability at the scale of neighborhoods communities or districts in a wider context of urban environments as well as strategies for planners developers policy makers and educators in the field of the built environment Through a comprehensive overview of urban sustainability practices in China this book investigates 12 case study projects These comprehensive explorations should in turn help construct the future directions of China's sustainable urban development and provide innovative pathways of sustainable urbanism in China and around the globe *The Sustainable City IX* N. Marchettini, C.A. Brebbia, R. Pulselli, S. Bastianoni, 2014-09-23 Containing the proceedings of the 9th International Conference on Urban Regeneration and Sustainability this book addresses the multi disciplinary aspects of urban planning a result of the increasing size of cities the amount of resources and services required and the complexity of modern society Most of earth's population now lives in cities and the process of urbanisation still continues generating many problems deriving from the drift of the population towards them These problems can be resolved by cities becoming efficient habitats saving resources in a way that improves the quality and standard of living The process however faces a number of major challenges related to reducing pollution improving main transportation and infrastructure systems New urban solutions are required to optimise the use of space and energy resources leading to improvements in the environment i.e. reduction in air water and soil pollution as well as efficient ways to deal with waste generation These challenges contribute to the development of social and economic imbalances and require the development of new solutions Large cities are probably the most complex mechanisms to manage However despite such complexity they represent a fertile ground for architects engineers city planners social and political scientists and other professionals able to conceive new ideas and time them according to technological advances and human requirements The challenge of planning sustainable cities lies in considering their dynamics the exchange of energy and matter and the function and maintenance of ordered structures directly or

indirectly supplied and maintained by natural systems Topics covered include Urban strategies Planning development and management Urban conservation and regeneration The community and the city Eco town planning Landscape planning and design Environmental management Sustainable energy and the city Transportation Quality of life Waterfront development Case studies Architectural issues Cultural heritage issues Intelligent environment and emerging technologies Planning for risk Disaster and emergency response Safety and security Waste management Infrastructure and society Urban metabolism

Masterplanning for Change Ombretta Romice, Sergio Porta, Alessandra Feliciotti, 2020-07-03 Cities are under increased pressure to be resilient and resistant to the effects of climate change and rapid urbanisation However this idea has still not been fully integrated in to practice This book presents a practical approach to masterplanning the city and its areas existing and new as urban environments for the 21st century addressing the design of cities as complex adaptive systems

Sustainable Residential Landscapes Carl Smith, 2020-01-07 This book is a compilation of 10 recently published academic articles addressing sustainable residential landscape design and planning across geographies scales and perspectives from American rain garden design to South Korean urban forestry from Mexican community open space design to Australian neighborhood park planning and from Chinese urban design to Bolivian land use change This volume brings together authors from a growing community of landscape sustainability scholars of landscape architecture and architecture planning and construction ecology and horticulture agricultural and environmental sciences and health exercise and nutrition In summary these papers address facets of a fundamental challenge for the 21st century the design and planning of sustainable and resilient human settlements

The Visual Language of Technique Luigi Cocchiarella, 2015-03-14 The book is inspired by the first seminar in a cycle connected to the celebrations of the 150th anniversary of the Politecnico di Milano Dealing with the Image Ivory Towers and Virtual Bridges was the motto of this meeting aiming to stimulate a discussion among engineers designers and architects all of whom are traditionally involved in the use of the Image as a specialized language supporting their work their research activities and their educational tasks The book will also include the essays of invited or interviewed authors from other disciplines namely Philosophy Mathematics and Semiotics According to Regis Debray in the present Visual Age which he has significantly defined as a Video Sphere all the information tends to be processed and controlled by means of visual devices This occurs especially in the various branches of many technical studies and activities one of the most sensitive areas to the use of Visual Language in the past and even more in the present

Envisioning Architecture Eugenio Morello, Barbara E. A. Piga, 2013 **Planning, Development and Management of Sustainable Cities** Tan Yigitcanlar, Md. (Liton) Kamruzzaman, 2019-04-30 The concept of sustainable urban development has been pushed to the forefront of policymaking and politics as the world wakes up to the impacts of climate change and the destructive effects of the Anthropocene Climate change has emerged to be one of the biggest challenges faced by our planet today threatening both built and natural systems with long term consequences which may be irreversible While there is a

vast body of literature on sustainability and sustainable urban development there is currently limited focus on how to cohesively bring together the vital issues of the planning development and management of sustainable cities Moreover it has been widely stated that current practices and lifestyles cannot continue if we are to leave a healthy living planet to not only the next generation but also to the generations beyond The current global school strikes for climate action known as Fridays for Future evidences this The book advocates the view that the focus needs to rest on ways in which our cities and industries can become green enough to avoid urban ecocide This book fills a gap in the literature by bringing together issues related to the planning development and management of cities and focusing on a triple bottom line approach to sustainability

Resilience in Ecology and Urban Design S.T.A. Pickett, M.L. Cadenasso, Brian McGrath, 2013-01-13 The contributors to this volume propose strategies of urgent and vital importance that aim to make today's urban environments more resilient Resilience the ability of complex systems to adapt to changing conditions is a key frontier in ecological research and is especially relevant in creative urban design as urban areas exemplify complex systems With something approaching half of the world's population now residing in coastal urban zones many of which are vulnerable both to floods originating inland and rising sea levels making urban areas more robust in the face of environmental threats must be a policy ambition of the highest priority The complexity of urban areas results from their spatial heterogeneity their intertwined material and energy fluxes and the integration of social and natural processes All of these features can be altered by intentional planning and design The complex integrated suite of urban structures and processes together affect the adaptive resilience of urban systems but also presupposes that planners can intervene in positive ways As examples accumulate of linkage between sustainability and building landscape design such as the Shanghai Chemical Industrial Park and Toronto's Lower Don River area this book unites the ideas data and insights of ecologists and related scientists with those of urban designers It aims to integrate a formerly atomized dialog to help both disciplines promote urban resilience

Landscape and the Ideology of Nature in Exurbia K. Valentine Cadieux, Laura Taylor, 2013-05-07 This book explores the role of the ideology of nature in producing urban and exurban sprawl It examines the ironies of residential development on the metropolitan fringe where the search for nature brings residents deeper into the world from which they are imagining their escape of Federal Express technologically mediated communications global supply chains and the anonymity of the global marketplace and where many of the central features of exurbia very low density residential land use monster homes and conversion of forested or rural land for housing contribute to the very problems that the social and environmental aesthetic of exurbia attempts to avoid The volume shows how this contradiction to live in the green landscape and to protect the green landscape from urbanization gets caught up and represented in the ideology of nature and how this ideology in turn constitutes and is constituted by the landscapes being urbanized

Perspectives in Urban Ecology Wilfried Endlicher, 2011-06-21 This book gives an interdisciplinary overview on urban ecology Basic understanding of urban nature development and its social reception are

discussed for the European Metropolitan Area of Berlin Furthermore we investigate specific consequences for the environment nature and the quality of life for city dwellers due to profound changes such as climate change and the demographic and economic developments associated with the phenomena of shrinking cities Actual problems of urban ecology should be discussed not only in terms of natural dimensions such as atmosphere biosphere pedosphere and hydrosphere but also in terms of social and cultural dimensions such as urban planning residence and recreation traffic and mobility and economic values Our research findings focus on streets new urban landscapes intermediate use of brown fields and the relationships between urban nature and the well being of city dwellers Finally the book provides a contribution to the international discussion on urban ecology

Geospatial Analysis and Modelling of Urban Structure and Dynamics Bin Jiang,Xiaobai Yao,2010-06-16 A Coming of Age Geospatial Analysis and Modelling in the Early Twenty First Century Forty years ago when spatial analysis first emerged as a distinct theme within geography s quantitative revolution the focus was largely on consistent methods for measuring spatial correlation The concept of spatial au correlation took pride of place mirroring concerns in time series analysis about similar kinds of dependence known to distort the standard probability theory used to derive appropriate statistics Early applications of spatial correlation tended to reflect geographical patterns expressed as points The perspective taken on such analytical thinking was founded on induction the search for pattern in data with a view to suggesting appropriate hypotheses which could subsequently be tested In parallel but using very different techniques came the development of a more deductive style of analysis based on modelling and thence simulation Here the focus was on translating prior theory into forms for generating testable predictions whose outcomes could be compared with observations about some system or phenomenon of interest In the intervening years spatial analysis has broadened to embrace both inductive and deductive approaches often combining both in different mixes for the variety of problems to which it is now applied

Sustainability and the City C. A. Brebbia,J.J Sendra,2018-03-28 Comprising specially selected papers this book refers to all aspects of urban environment and provides solutions that lead towards sustainability These research studies include contributions that have been made from a diverse range of researchers resulting in a variety of topics and experiences Urban areas face a number of challenges related to reducing pollution improving main transportation and infrastructure systems and these challenges can contribute to the development of social and economic imbalances and require the development of new solutions The challenge is to manage human activities pursuing welfare and prosperity in the urban environment whilst considering the relationships between the parts and their connections with the living world The dynamics of its networks flows of energy matter people goods information and other resources are fundamental for an understanding of the evolving nature of today s cities Large cities represent a productive ground for architects engineers city planners social and political scientists able to conceive new ideas and time them according to technological advances and human requirements The multidisciplinary components of urban planning the challenges

presented by the increasing size of cities the amount of resources required and the complexity of modern society are all addressed

Crossing Borders Mimi Sheller, Kevin Hannam, 2018-10-18 *Crossing Borders* examines how translocal transnational and internal borders of various kinds distribute uneven capabilities for moving dwelling and circulating The contributors offer nuanced understandings of the politics of mobility across various kinds of borders and forms of cultural circulation showing how people experience and practice crossing many different borders Several chapters draw on interviews and ethnographic methods to analyze transnational migration while others focus on material relations and cultural practices Rather than the usual narrative of mobility as a kind of freedom border crossing emerges here as an instrumental practice for building translocal livelihoods a tactic for simply getting by and a material practice potentially generating new forms of future sociality Ultimately these diverse perspectives on crossing borders offer new ways to think about the mobility of political relations and the politics of mobile relations in a world of growing circulation across borders but also flexible forms of re bordering This book was originally published as a special issue of *Mobilities*
