Handbook of Research on Resource Management and the Struggle for Water Sustainability in Africa

Access to water and sanitation remains a critical challenge in various countries in Africa. The crisis remains the crisis of governance rather than the physical and economic scarcity. In most countries, water is realized as a human right and subsidies are provided for the indigent households. The tricky issue in rural areas remains an issue of access that is often linked to willingness and ability to pay for the installation and daily consumption. The Handbook of Research on Resource Management and the Struggle for Water Sustainability in Africa presents practical examples of integrated water resources management (IWRM) implementation in African countries. It further addresses the contemporary issues of alternative energy as part of climate change mitigation and utilizes case studies to examine how communities adapt to climate change. Covering topics such as climate justice, ecological governance, and political ecology, this major reference work is a dynamic resource for government officials, sociologists, climate scientists, activists, students and educators of higher education, academicians, and researchers in the fields of social sciences, government, developmental studies, international relations, and political science.

Engineers in a Developing Country

The study provides a demographic analysis of employment trends across the public and private sectors of the economy, and investigates the demand for engineers, technologists and technicians in the workforce. A comprehensive analysis of the educational context for engineering professionals focuses on enrolment, graduation and throughput trends in all engineering disciplines at universities and universities of technology, and reveals that although there have been positive innovations in education and training strategies in recent years, many issues, especially at secondary school level, remain a challenge. Women in engineering is a particular focus of this study, which devotes a chapter to examining the factors that influence their choice of career, the barriers they experience in the labour market and strategies for encouraging women into the profession. This comprehensive monograph offers valuable quantitative and qualitative information about engineering capacity across all engineering disciplines in South Africa. It is therefore an important reference for all engineering academics as well as decision-makers in both the private and public sectors, and will be useful to aspiring and current engineering students, whatever their field.

The First Chemistry Department in Port Elizabeth

The first Chemistry Department in Port Elizabeth was founded in 1929 at the PE Technical College in Russell Road. This institution was later renamed the College for Advanced Technical Education (CATE) and still later it became the PE Technikon, when it moved to its Summerstrand Campus. This is the story of this Chemistry Department over 75 years, until 2005, when the Techikon became part of the newly established Nelson Mandela Metropolitan University. Archive material was used to compile the story of the various Heads of Department and their staff, who contributed so much in making this Department so successf
