Urban Machinery Inside Modern European Cities Inside Technology:

Urban Machinery Mikael Hård, Thomas J. Misa, 2008 *Urban Machinery* investigates the technological dimension of modern European cities vividly describing the most dramatic changes in the urban environment over the last century and a half. Written by leading scholars from the history of technology, urban history, sociology, and science, technology, and society, the book views the European city as a complex construct entangled with technology. The chapters examine the increasing similarity of modern cities and their technical infrastructures including communication, energy, industrial, and transportation systems and the resulting tension between homogenization and cultural differentiation. The contributors emphasize the concept of circulation, the process by which architectural ideas, urban planning principles, engineering concepts, and societal models spread across Europe as well as from the United States to Europe. They also examine the parallel process of appropriation, how these systems and practices have been adapted to prevailing institutional structures and cultural preferences. *Urban Machinery* with contributions by scholars from eight countries and more than thirty illustrations, many of them rare photographs never published before, includes studies from northern and southern and from eastern and western Europe and also discusses how European cities were viewed from the periphery: modernizing Turkey and from the United States. Contributors: Hans Buiter, Paolo Capuzzo, Noyan Din, Kal Cornelis, Disco P, I. Germuska, Mikael Hård, Martina Heiler, Dagmara Jajęśniak, Quast, Andrew Jamison, Per Lundin, Thomas J. Misa, Dieter Schott, Marcus Stippak. Mikael Hård is Professor of History at Darmstadt University of Technology. His books include *The Intellectual Appropriation of Technology: Discourses on Modernity, 1900-1939*, coedited with Andrew Jamison, MIT Press, 1998. Thomas J. Misa is ERA Land Grant Professor of the History of Technology at the University of Minnesota, where he directs the Charles Babbage Institute. His books include *Modernity and Technology*, coedited with Philip Brey and Andrew Feenberg, MIT Press, 2003.

Developer's Dilemma Casey O'Donnell, 2014-11-21. Step inside the shoes of video game creators in this fascinating look at game development and how it can inform our understanding of work. Rank and file game developers bring videogames from concept to product and yet their work is almost invisible, hidden behind the famous names of publishers, executives, or console manufacturers. In this book, Casey O'Donnell examines the creative, collaborative practice of typical game developers. His investigation of why game developers work the way they do sheds light on our understanding of work, the organization of work, and the market forces that shape and are shaped by media industries. O'Donnell shows that the ability to play with the underlying systems, technical, conceptual, and social, is at the core of creative and collaborative practice, which is central to the New Economy. When access to underlying systems is undermined, so too is creative, collaborative process. Drawing on extensive fieldwork in game studios in the United States and India, O'Donnell stakes out new territory empirically, conceptually, and methodologically. Mimicking the structure of videogames, the book is divided into worlds within which are levels, and each world ends with a boss fight, a rant about lessons learned and tools mastered. O'Donnell describes the process of videogame development from pre-

production through production considering such aspects as experimental systems socially mandatory overtime and the perpetual startup machine that exhausts young initially enthusiastic workers He links work practice to broader systems of publishing manufacturing and distribution introduces the concept of a privileged actor intra internetwork and describes patent and copyright enforcement by industry and the state
