Us Climate Action Report 2014:

U.s. Climate Action Report 2014 U.s. Department of State, 2015-01-30 On January 1 2014 the Department of State submitted the 2014 U S Climate Action Report to the United Nations Framework Convention on Climate Change UNFCCC This report which includes the First U S Biennial Report and Sixth U S National Communication to the UNFCCC details actions the United States is taking domestically and internationally to mitigate adapt to and assist others in addressing climate change The U S Climate Action Report contains two documents the first ever U S Biennial Report and the sixth quadrennial National Communication This report reflects the input of 21 federal agencies The U S Government also provided an opportunity for public comment through a notice in the Federal Register posted on September 26th and the final document reflects many suggestions provided by members of the public Together these documents Explain how U S social and economic circumstances affect U S greenhouse gas emission levels Summarize U S greenhouse gas emission trends from 1990 through 2011 Identify existing and planned U S policies and measures to reduce greenhouse gas emissions Show future trends for U S greenhouse gas emissions under both existing and planned climate policies and measures Outline the potential impacts of climate change on the United States and the preparedness and resilience measures the Nation is taking to address those impacts Provide information on climate related financial resources and technology diffusion and Detail U S research and systematic observation efforts and describe U S climate education training and outreach initiatives The 2014 U S Climate Action Report fulfills requirements under the UNFCCC for all Parties to report periodically on actions and progress in combating climate change The last U S Climate Action Report submitted was in 2010 The 2014 U S Climate Action Report fulfills a commitment under the United Nations Framework Convention on Climate Change UNFCCC to publish every four years a National Communication that provides a comprehensive report on actions taken to combat climate change and thereby meet the objectives and provisions of the UNFCCC In addition for the first time the Climate Action Report includes a Biennial Report that outlines progress that Parties are making in meeting targets and actions they have pledged to fulfill in the period leading up to 2020 **United States Climate Action Report 2014** U.s. Department of the State, 2014-10-24

The U S Biennial Report as part of the 2014 U S Climate Action Report outlines how U S action on climate change puts the United States on a path to reach the ambitious but achievable goal of reducing U S greenhouse gas GHG emissions in the range of 17 percent below 2005 levels by 2020 During 2009 2011 average U S GHG emissions fell to the lowest level for any three year period since 1994 1996 due to contributions from both economic factors and government policies The United States has made significant efforts over the past five years and our progress can be attributed in part to these efforts including stringent long term standards for vehicle GHG emissions and efficiency increased building and appliance efficiency and doubling electricity generation from wind and solar The President s Climate Action Plan EOP 2013a released in June 2013 builds upon the progress of the past five years and outlines significant additional actions that are necessary to maintain

the downward trend in U S GHG emissions such as putting in place new rules to cut carbon pollution from the power sector increasing energy efficiency and reducing methane CH₄ and hydrofluorocarbon HFC emissions The plan also initiates efforts to bolster the capacity of our forests and other lands to continue sequestering carbon in the face of a changing climate and other pressures We expect that implementation of these actions will achieve substantial additional emission reductions This report is a first step toward tracking our progress toward meeting the U S 2020 emission reduction goal It represents an assessment of the range of GHG emission reductions that implementation of a collection of actions across sectors of the economy consistent with those included in The President s Climate Action Plan can achieve Over the coming years as standards and policies are put in place we will sharpen our estimates of achievable emission reductions In addition this report discusses U S actions to assist developing countries in their efforts to mitigate and adapt to climate change The United States is engaging the full range of institutions bilateral multilateral development finance and export credit to mobilize private finance and invest strategically in building lasting resilience to unavoidable climate impacts to reduce emissions from deforestation and land degradation and to support low carbon development strategies and the transition to a sustainable clean energy economy

Climate Change Finance and International Law Alexander Zahar, 2016-12-01 Since 2010 a significant quantity of international climate change finance has begun to reach developing countries However the transfer of finance under the international climate change regime the legal and ethical obligations that underpin it the constraints on its use its intended outcomes and its successes failures and future potential constitutes a poorly understood topic Climate Change Finance and International Law fills this gap in the legal scholarship The book analyses the legal obligations of developed countries to financially support qualifying developing countries to pursue globally significant mitigation and adaptation outcomes as well as the obligations of the latter under the international regime of financial support Through case studies of climate finance mechanisms and a multitude of other sources this book delivers a rich legal and empirical understanding of the implementation of states climate finance obligations to date The book will be of interest to scholars and students of international law and policy international relations and the maturing field of climate change law

Market Instruments and the Protection of Natural Resources Natalie P. Stoianoff, Larry Kreiser, Bill Butcher, Janet E. Milne, Hope Ashiabor, 2016-08-26

Only through a concerted global effort can we protect our natural resources save our precious natural environment and indeed our future But pressures on natural resources come from many directions such as overuse mismanagement and contamination This much needed book reviews and evaluates the use of market and fiscal instruments in protecting our natural resources from rural to marine environments Market instruments that are designed to protect the global atmosphere are evaluated along with carbon instruments and environmental tax incentives Meanwhile consideration is given to shifting the tax burden to achieve environmentally responsible outcomes balancing sustainable use and natural resource protection and protecting water resources

Water and Energy Gustaf Olsson, 2015-06-14 Rapid and important developments in the area of energy water nexus over the last two to three years have been significant This new edition of *Water and Energy Threats and Opportunities* is timely and continues to highlight the inextricable link between water and energy providing an up to date overview of the subject with helpful detailed summaries of the technical literature Water and Energy has been up dated throughout and major changes are new chapters on global warming and fossil fuels including shale gas and fracking the consequences of the Deepwater Horizon accident in the Mexican Gulf and the Niger Delta oil spills new developments in hydropower and continued competition between food water and energy Water and Energy Threats and Opportunities 2e creates an awareness of the important couplings between water and energy It shows how energy is used in all the various water cycle operations and demonstrates how water is used and misused in all kinds of energy production and generation Population increase climate change and an increasing competition between food and fuel production create enormous pressures on both water and energy availability Since there is no replacement for water water security looks more crucial than energy security This is true not only in developing countries but also in the most advanced countries For example the western parts of the USA suffer from water scarcity that provides a

real security threat Part One of the book describes the water energy nexus the conflicts and competitions and the couplings between water security energy security and food security Part Two captures how climate change population increase and the growing food demand will have major impact on water availability in many countries in the world Part Three describes water for energy and how energy production and conversion depend on water availability As a consequence all planning has to take both water and energy into consideration The environmental including water consequences of oil and coal exploration and refining are huge in North America as well as in the rest of the world Furthermore oil leak accidents have hit America Africa Europe as well as Asia The consequences of hydropower are discussed and the competition between hydropower generation flood control and water storage is illustrated The importance of water for cooling thermal power plants is described as this was so tragically demonstrated at the Fukushima nuclear plants in 2011 Climate change will further emphasize the strong coupling between water availability and the operation of power plants Part Four analyses energy for water how water production and treatment depend on energy The book shows that a lot can be done to improve equipment develop processes and apply advanced monitoring and control to save energy for water operations Significant amounts of energy can be saved by better pumping the reduction of leakages controlled aeration in biological wastewater treatment more efficient biogas production and by improved desalination processes There are 3 PowerPoint presentations available for Water and Energy threats and opportunities 2e About the author Gustaf Olsson Professor Em in Industrial Automation Lund University Sweden Since 2006 Gustaf has been Professor Emeritus at Lund University Sweden Gustaf has devoted his research to control and automation in water systems electrical power systems and process industries From 2006 to 2008 he was part time professor in electrical power systems at Chalmers University of Technology Sweden He is guest professor at the Technical University of Malaysia UTM and at the Tsinghua University in Beijing China and he is an honorary faculty member of the Exeter University in UK Between 2005 and 2010 he was the editor in chief of the journals Water Science and Technology and Water Science and Technology Water Supply IWA Publishing From 2007 to 2010 he was a member of the IWA Board of Directors and in 2010 he received the IWA Publication Award In 2012 he was the awardee of an Honorary Doctor degree at UTM and an Honorary Membership of IWA Gustaf has guided 23 PhDs and a few hundred MSc students through their exams and has received the Lund University pedagogical award for distinguished achievements in the education The Lund University engineering students elected him as the teacher of the year He has spent extended periods as a guest professor and visiting researcher at universities and companies in the USA Australia and Japan and has been invited as a guest lecturer in 19 countries outside Sweden He has authored nine books published in English Russian German and Chinese and contributed with chapters in another 19 books as well as more than 170 scientific publications *The Hastings Law Journal* ,2015-02 *U.S. Climate Action Report* ,2002 **Resource Efficiency and Climate Change** United Nations Environment Programme. International Resource Panel,2021-01-12 The International Resource Panel IRP was established to provide

independent coherent and authoritative scientific assessments on the use of natural resources and their environmental impacts over the full life cycle The Panel aims to contribute to a better understanding of how to decouple economic growth from environmental degradation while enhancing well being The Secretariat is hosted by the United Nations Environment Programme IRP assessments demonstrate the opportunities for governments businesses and wider society to work together to create and implement policies that ultimately lead to sustainable resource management including through better planning technological innovation and strategic incentives and investments Materials are vital to modern society but their production is an important source of greenhouse gases Emissions from material production are now comparable to those from agriculture forestry and land use change combined yet they have received much less attention from the climate policy community The IPR authors propose looking beyond energy efficiency to reduce global carbon footprint This report was developed by the IRP in response to a request from the Group of 7 It conducts a rigorous assessment of the contribution of material efficiency to GHG abatement strategies More concretely it assesses the potential reduction of GHG emissions from material efficiency strategies applied in residential buildings and light duty vehicles and reviews policies that address these strategies The IRP modelling results show that increasing material efficiency can help enhance efforts in moving towards the 1.5°C target set by the Paris Agreement Page 4 of cover
