The William Lowell Putnam Mathematical Competition 1985–2000: Problems, Solutions, and Commentary Kiran S. Kedlaya, Bjorn Poonen, Ravi Vakil, 2020-01-16 This third volume of problems from the William Lowell Putnam Competition is unlike the previous two in that it places the problems in the context of important mathematical themes The authors highlight connections to other problems to the curriculum and to more advanced topics The best problems contain kernels of sophisticated ideas related to important current research and yet the problems are accessible to undergraduates The solutions have been compiled from the American Mathematical Monthly Mathematics Magazine and past competitors Multiple solutions enhance the understanding of the audience explaining techniques that have relevance to more than the problem at hand In addition the book contains suggestions for further reading a hint to each problem separate from the full solution and background information about the competition The book will appeal to students teachers professors and indeed anyone interested in problem solving as a gateway to a deep understanding of mathematics

The Contest Problem Book IX David Wells, J. Douglas Faires, 2021-02-22 This is the ninth book of problems and solutions from the American Mathematics Competitions AMC contests It chronicles 325 problems from the thirteen AMC 12 contests given in the years between 2001 and 2007 The authors were the joint directors of the AMC 12 and the AMC 10 competitions during that period The problems have all been edited to ensure that they conform to the current style of the AMC 12 competitions Graphs and figures have been redrawn to make them more consistent in form and style and the solutions to the problems have been both edited and supplemented A problem index at the back of the book classifies the problems into subject areas of Algebra Arithmetic Complex Numbers Counting Functions Geometry Graphs Logarithms Logic Number Theory Polynomials Probability Sequences Statistics and Trigonometry A problem that uses a combination of these areas is listed multiple times The problems on these contests are posed by members of the mathematical community in the hope that all secondary school students will have an opportunity to participate in problem solving and an enriching mathematical experience

Methods of Solving Sequence and Series Problems Ellina Grigorieva, 2016-12-09 This book aims to dispel the mystery and fear experienced by students surrounding sequences series convergence and their applications The author an accomplished female mathematician achieves this by taking a problem solving approach starting with fascinating problems and solving them step by step with clear explanations and illuminating diagrams The reader will find the problems interesting unusual and fun yet solved with the rigor expected in a competition Some problems are taken directly from mathematics competitions with the name and year of the exam provided for reference Proof techniques are emphasized with a variety of methods presented The text aims to expand the mind of the reader by often presenting multiple ways to attack the same problem as well as drawing connections with different fields of mathematics Intuitive and visual arguments are presented alongside technical proofs to provide a well rounded methodology With nearly 300 problems including hints answers and solutions *Methods of Solving Sequences and Series Problems* is an ideal resource for those learning calculus preparing for mathematics competitions or just looking for a worthwhile challenge It can also be used by faculty who are looking for interesting and insightful problems that are not commonly found in other textbooks

Problems from Murray Klamkin Murray S. Klamkin, 2009-04-02 A collection of problems proposed by Murray Klamkin over his career It contains the quickies problems with quick and neat solutions he

proposed in Crux Mathematicorum his longer problems and also problems which were proposed in tribute to him after he died Solutions are provided *The Contest Problem Book VIII* J. Douglas Faires, David Wells, 2022-02-25 For more than 50 years the Mathematical Association of America has been engaged in the construction and administration of challenging contests for students in American and Canadian high schools The problems for these contests are constructed in the hope that all high school students interested in mathematics will have the opportunity to participate in the contests and will find the experience mathematically enriching These contests are intended for students at all levels from the average student at a typical school who enjoys mathematics to the very best students at the most special school In the year 2000 the Mathematical Association of America initiated the American Mathematics Competitions 10 AMC 10 for students up to grade 10 The Contest Problem Book VIII is the first collection of problems from that competition covering the years 2001-2007 J Douglas Faires and David Wells were the joint directors of the AMC 10 and AMC 12 during that period and have assembled this book of problems and solutions There are 350 problems from the first 14 contests included in this collection A Problem Index at the back of the book classifies the problems into the following major subject areas Algebra and Arithmetic Sequences and Series Triangle Geometry Circle Geometry Quadrilateral Geometry Polygon Geometry Counting Coordinate Geometry Solid Geometry Discrete Probability Statistics Number Theory and Logic The major subject areas are then broken down into subcategories for ease of reference The problems are cross referenced when they represent several subject areas *The Cauchy-Schwarz Master Class* J. Michael Steele, 2004-04-26 This lively problem oriented text first published in 2004 is designed to coach readers toward mastery of the most fundamental mathematical inequalities With the Cauchy Schwarz inequality as the initial guide the reader is led through a sequence of fascinating problems whose solutions are presented as they might have been discovered either by one of history's famous mathematicians or by the reader The problems emphasize beauty and surprise but along the way readers will find systematic coverage of the geometry of squares convexity the ladder of power means majorization Schur convexity exponential sums and the inequalities of Holder Hilbert and Hardy The text is accessible to anyone who knows calculus and who cares about solving problems It is well suited to self study directed study or as a supplement to courses in analysis probability and combinatorics

The Alberta High School Math Competitions 1957-2006 Andrew Chiang-Fung Liu, 2008 Presents the problems and answers for the first 50 years of the Alberta High School Mathematics Competition up to 2005-2006 Full solutions are provided to those from the Modern period often supplemented with multiple solutions or additional commentaries *A Gentle Introduction to the American Invitational Mathematics Exam* Scott A. Annin, 2015-11-16 This book is a celebration of mathematical problem solving at the level of the high school American Invitational Mathematics Examination There is no other book on the market focused on the AIME It is intended in part as a resource for comprehensive study and practice for the AIME competition for students teachers and mentors After all serious AIME contenders and competitors should seek a lot of practice in order to succeed However this

book is also intended for anyone who enjoys solving problems as a recreational pursuit The AIME contains many problems that have the power to foster enthusiasm for mathematics the problems are fun engaging and addictive The problems found within these pages can be used by teachers who wish to challenge their students and they can be used to foster a community of lovers of mathematical problem solving There are more than 250 fully solved problems in the book containing examples from AIME competitions of the 1980 s 1990 s 2000 s and 2010 s In some cases multiple solutions are presented to highlight variable approaches To help problem solvers with the exercises the author provides two levels of hints to each exercise in the book one to help stuck starters get an idea how to begin and another to provide more guidance in navigating an approach to the solution

The William Lowell Putnam Mathematical Competition Gerald L. Alexanderson, Leonard F. Klosinski, Loren C. Larson, 2003 The Putnam Competition has since 1928 been providing a challenge to gifted college mathematics students This book the second of the Putnam Competition volumes contains problems with their solutions for the years 1965 1984 Additional solutions are presented for many of the problems Included is an essay on recollections of the first Putnam Exam by Herbert Robbins as well as appendices listing the winning teams and students from 1965 through 1984 This volume offers the problem solver an enticing sample of challenging problems and their solutions In 1980 the MAA published the first William Lowell Putnam Mathematical Competition book covering the contest from 1938 to 1964 In 2002 the third of the Putnam problem books appeared covering the years 1985 through 2000 All three of these books belong on the bookshelf of students teachers and all interested in problem solving
