

A young man with dark hair, wearing a red t-shirt and plaid shorts, is lying on his back inside a large, circular opening in a concrete wall. He is looking out towards the ocean under a clear blue sky. The scene is framed by the circular opening, creating a sense of looking out from a hidden or transitional space.

THE TRANSFORMATIONAL SELF

Attachment and the End of the Adolescent Phase

The Transformational Self Attachment And The End Of The Adolescent Phase

Sibnath Deb, Brian A. Gerrard

The Transformational Self Attachment And The End Of The Adolescent Phase:

The Transformational Self Harold K. Bendicson, 2018-05-01 This book is an attempt to add to the theoretical discussion regarding the nature of the intrapsychic and interpersonal transformational changes associated with the transition from adolescence to young adulthood The author introduces the concept of the Transformational Self a phase specific dimension of the neural self and demonstrates the enhanced explanatory power that it offers in attempting to examine the sometimes dramatic shifting self states accompanying the metamorphosis from adolescence into young adulthood A necessary precondition for the emergence of the Transformational Self is the maturation of the pre frontal cortex and its enhanced neural connectivity With this biological achievement executive functioning a strengthened ego self capacity can arrive at a mature level of external stabilization and internal intrapsychic structuralization Conceptualized in self referencing metaphor and expressed and reinforced through long term potentiation repeated firing patterns of synchronous neural assemblies the late adolescent reconfigured self state becomes a true developmental potentiality evidenced by the use of different self and other representations *Psychoanalysis, Neuroscience and Adolescent Development* Harold K. Bendicson, 2019-01-14

Psychoanalysis Neuroscience and Adolescent Development Non Linear Perspectives on the Regulation of the Self explores how psychoanalysis can combine its theoretical perspectives with more recent discoveries about neurological and non linear developmental processes that unfold during the period of puberty to young adulthood to help inform understanding of contemporary adolescent behaviours and mental health issues With the powerful impact of neuroscience research findings opportunities emerge to create a new paradigm to attempt to organize specific psychoanalytic theories Neurobiological regulation offers such an opportunity By combining elements of domains of compatible knowledge into a flexible explanatory synergy the potential for an intellectually satisfying theoretical framework can be created In this work Harold Bendicson formulates a multi disciplinary theoretical approach involving current research and drawing on neuroscience to consider the behaviour regulation processes of the mind brain and the capacities and potential it brings to understanding the development of adolescents and young adults *Psychoanalysis Neuroscience and Adolescent Development* advances Bendicson s study of adolescence and the transition to young adulthood begun in *The Transformational Self* It will be of great interest to psychoanalysts and psychoanalytic psychotherapists as well as psychologists clinical social workers psychiatrists and counsellors *The Neuropsychodynamic Treatment of Self-Deficits* Joseph Palombo, 2016-12-19 *The Neuropsychodynamic Treatment of Self Deficits* examines how to work psychoanalytically with patients to address the problems that result from neuropsychological impairments exploring the latest advances in understanding and treatment while also addressing the concerns that clinicians may have in providing treatment Patients with disorders such as ADHD dyslexia and executive function disorders can often feel shame and develop defenses as a result of their disorders These defenses can then become overgeneralized and lead to future dysfunctional feelings thoughts and behaviors For therapists the challenge is to find ways

of responding to these patients and to help them deal with their issues at the level of the multiple domains of self experience rather than at the single level of their intrapsychic dynamics This book proposes a new neuropsychodynamic perspective that is bound together by a metatheory deriving from dynamic systems theory Joseph Palombo breaks new ground in his consistent application of non linear dynamic systems theory and a levels of analysis perspective The framework suggested conceives of the therapeutic process as a collaborative effort in which each member of the dyad makes a unique contribution to the process Change agents that permit patients to benefit from therapeutic interventions include the relationship between patient and therapist the understanding that emerges from the identification of the self deficits and the proactive engagement of the patient s sense of agency The great advantage of Palombo s framework is that it permits the integration of a broad set of domains of experience that include the neuropsychological the introspective and the interpersonal This book will allow the reader to become familiar with the types of patients that have neuropsychological deficits providing an understanding of the psychodynamics of these conditions and enabling better preparedness to address psychological needs More important Palombo also makes the underlying case that an understanding of brain function is critical to any assistance such patients may need Covering work with children adolescents and adults The Neuropsychodynamic Treatment of Self Deficits is the first book to offer a guide to understanding and working with patients with a range of neuropsychological disorders from a broadly psychoanalytic perspective It will appeal to psychoanalysts psychotherapists and clinical psychologists as well as clinical social workers family therapists and mental health nurses
