The Ultimate Space Law Collection Volume 2 National Space Legislation Part I:

National Space Legislation Dorina Andoni, 2014 Space Law refers to the body of international and national laws and customs governing human activities in outer space For the past half century the majority of outer space operations have been conducted by government agencies However the world now stands at the precipice of a new era in spaceflight where private companies and international organizations are preparing to assume many of the missions traditionally undertaken by governments and to open outer space to the general public At the same time questions of ownership and commercialization environmental protection lunar mining as well as the peaceful and equitable use of outer space are rising As space activities grow the relatively young area of space law will have to face new challenges The purpose of The Ultimate Space Law Collection series is to provide the basis for a practical understanding of space law This collection contains the most essential national and international legal instruments which regulate this special field of law It will be a valuable source of information not only for legal professionals but also for everyone interested in the corpus juris spatialis Volume 1 ISBN 978 94 6240 031 3 2013 presented the relevant treaties and declarations whereas Volume 2 presents the space laws that apply in Europe including Austria Belgium France Germany Italy the Netherlands Norway the Russian Federation Spain Sweden Ukraine and the UK and in the Asia Pacific Australia China Japan and the Republic of Korea Volume 2 1 presents the space laws that apply in Africa South Africa and in the Americas the US Canada Argentina Brazil and Chile

The Ultimate Space Law Collection Dorina Andoni, 2014 The national space activities are attributed to States through the launching and registration of a space object The registration of space objects by the launching State the State which procures the launching or the State from whose territory or facility a space object is launched is an obligation of States which deems them responsible National space laws and regulations are the toolbox of States to implement international obligations at the national level by assuring the conformity of the non governmental and commercial entities when carrying out space activities with the international space law The national space Laws of each space faring country are included in this second volume National Space Legislation of the series The Ultimate Space Law Collection Handbook of Space Law Frans von der Dunk, 2015-02-27 The Handbook of Space Law addresses the legal and regulatory aspects of activities in outer space and major space applications from a comprehensive and structured perspective It fundamentally addresses the dichotomy between the state oriented character

The Ultimate Space Law Collection: 1. National space legislation, part 2 Dorina Andoni, 2013 **The New Laws of Outer Space** Ugo Pagallo, 2024-11-14 This book maps out the moral legal and societal issues brought forth by the use of autonomous systems such as AI and smart robots in outer space Humanity is on the brink of a new space era in which projects for permanent human colonies on the Moon and space missions with autonomous AI systems will soon become a reality Principles and provisions of international space law fall increasingly short in tackling this scenario Experts and institutions have recommended improvements to the legal framework such as new international agreements or policies that

would not require any amendment to conventional law Most of the time such proposals and recommendations overlook the challenges posed by technology and how autonomous and intelligent systems in outer space require moral and legal standards of their own This book argues that the traditional focus on satellite communications space related services and the appropriability of celestial resources needs to be integrated by new laws of outer space regulating cybersecurity law and environmental law data governance and consumer protection The new laws of outer space will increasingly concern the development of new standards for the behaviour and decision making of AI systems and smart robots with and without humans aboard deep space missions and in next generation colonies What laws shall govern us out there in a new terra incognita This is the question that the book sets out to answer

Lex Ad Astra Matthew Gillett, Katja Grunfeld, Iva Ramuš Cvetković, 2025-03-13 Outer space has long been considered the last untouched wilderness However non State actors are increasingly active in space heightening the risk of space pollution Space law designed during the Cold War is State centric and makes inadequate provision for non State actors In the face of this emerging threat this book examines potential avenues of redress in space law including the Outer Space Treaty along with international environmental law international criminal law international humanitarian law and international human rights law It also reviews the national legislation adopted by space faring States at the domestic level In parallel the book examines the deeper theoretical implications addressing non State actor conduct under international law Ultimately it proposes a ground breaking new international law instrument to hold non State actors responsible for space pollution
