

UNIVERSAL MATHEMATICS

UNIVERSAL RATIOS.

All dimensions are pressure dimensions.
All dimensions simultaneously expand and contract in opposite directions of the same ratio.

With distance, plane, and area dimensions given, any planet or satellite in the solar system can be measured in all its dimensions by contracting or expanding the standard units of this planet in universal ratios.

Any relative dimension in any position, within a mass can be determined by applying the laws of universal ratios to that position.

THE LAWS.

— Expansion pressure is in direct ratio to the square of the distance, degree, area, plane, orbit or time unit, & to the cube of the volume.

+ Contraction pressure is in inverse ratio to the square of the distance, degree, area, plane, orbit or time unit, and to the cube of the volume.

Every mass in the universe occupies a measurable potential position.
