Unfolding River Looking At Nature:

Nature Sir Norman Lockyer, 1896 **Cities and Nature** Lisa Benton-Short, John Rennie Short, Professor John Rennie Short, Professor, 2013-07-04 Cities and Nature illustrates how the city is part of the environment and how it is subject to environmental constraints and opportunities The city has been treated in geographical writings as only a social phenomena and at the same time environmental scientists have tended to ignore the urban This book reconnects the science and social science through the examination of the urban It critiques the dominant academic discourse which ignores the environmental base of urban life and living and discusses the urban natural environment and how this is subjected to social influences The book is organized around three central themes urban environment in historical context issues in urban nature relations realigning urban nature relations Ideas such as pollution as a physical environmental fact often created or impacted by economic cultural and political changes are discussed as well as viewing pollution as a social act consuming patterns of everyday activities driving showering shopping eating and how this has an environmental impact The authors reintroduce a social science perspective in examining urban nature the city and its physical environment Cities and Nature clearly illustrates the physical and social elements of the urban environment and shows how these are important to examining the city It includes further reading and boxed case studies on Bangladesh Paris Delhi Rome Cubatao Thailand Los Angeles Chicago New Orleans and Toronto This book would be an asset to students and researchers in environmental studies urban studies and planning **Writing Nature** Sharon Cameron, 1989-01-15 At his death Henry Thoreau left the majority of his writing unpublished The bulk of this material is a journal that he kept for twenty four years Sharon Cameron s major claim is that this private work the Journal was Thoreau s primary work taking precedence over the books that he published in his lifetime Her controversial thesis views Thoreau s Journal as a composition that confounds the distinction between public and private the basis on which our conventional treatment of discourse depends The Aims and Methods of Nature Study John Rennie, 1911 **Nature** , 1896 **River of Life** Sandy Moonias, 2025-05-23 The future s unfolding Swaths of possibilities Rapids of change With cliffs of discovery In this vibrant collection of poems Sandy Moonias guides readers from the unknown to the edge where they may discover and find themselves These free verse and rhyming poems explore themes of trauma and addiction against a natural landscape juxtaposing our internal world with the external While our emotions may be fleeting Moonias showcases the permanence of the natural world The River of Life A Poetic Journey is the poet s expression of helping others understand and recover from trauma and addiction With so many people facing these difficulties Moonias hopes these poems will inspire and support those in need The path to wellness and healing is varied and individual but a journey no one has to endure alone Nature is always there for us if we know where to look With nature as a constant we find dependability in the birds eagles birch trees and rivers At the very heart of this collection is resilience of the environment of the human spirit When we break like frozen rivers in spring we can see ourselves as shards of ice or a possibility for change a

renewal remaking our former selves

The Nature of Order: The process of creating life Christopher Alexander, 2002

This four volume work allows the reader to form one picture of the world in which the perspectives from science beauty and grace and commonsense intuitions are interlaced On the Nature of Rivers J. Rzóska, 2013-03-09 Origin and Aims of this essay It was not by choice but by the misfortunes or fortunes of the last war that I became involved with rivers In December 1946 I obtained a lecturing post at the then Gordon Memorial College at Khartoum and the Principal of the college brought me to confluence of the two Niles and urged me to do something on the biology of the river I was very reluctant my experience was limited to lakes in Poland up to 1939 and I did not know anything about work on rivers The equipment was a rowing boat hired and a home made plankton net This limited our first exploratory steps to the immediate vicinity of Khartoum In both the White and Blue Nile we discovered the presence of a pure plankton This was contrary to opinions expressed in the limited scientific literature available at Khartoum which stimulated our doubts and the search for the origin of this phenomenon And so early in our work we became aware of the longitudinal sequence of events in running water a fundamental feature of river ecology of work were daunting In the Nile as in other long rivers the difficulties the water courses stretch for thousands of kilometers south and north of our base our work had to be done in time free from lecturing duties no research grants were available

The Nature of Order, Book Two: The Process of Creating Life Christopher Alexander, 2020-03-30

Scientifically this is perhaps the most exciting of the four books How do beautiful creations come into being Nature can make an infinite number of human faces each one unique each one beautiful The same is true for daffodils streams and stars But man made creations especially the towns and buildings of the 20th century have only occasionally been really good more often mediocre and in the last 50 years have most often been deadly What is the reason for the difference It hinges on the deep nature of the processes we use Merely understanding the geometry of beautiful and living form the topic of Book 1 is

not enough to help us create such a living geometry In the 20th century our society was locked into deadly processes which created our current built environment process that most people were not really aware of and did not question Despite their best efforts and intentions architects and planners working within these processes could not achieve a living built environment Life and beauty in the built world arise only from processes which allow living structure to unfold The secret lies in knowing as nature does what must happen in what order what sequence of events allows a living form to unfold successfully Here in Book 2 Alexander puts forward a fully developed theory of living process He defines conditions for a process to be living that is capable of generating living structure He shows how such processes work and how they may be created At the core of the new theory is the theory of structure preserving transformations This concept new in scientific thinking is based on the concept of wholeness defined in Book 1 A structure preserving transformation is one which preserves extends and enhances the wholeness of a system Structure preserving transformations provide the means for any step by step process social biological architectural or technical to reach configurations which are most profound most capable of supporting life The process of creation whether in the formation of a single object or in the piecemeal aggregation of a town requires this sort of generative process a careful and deliberate sequence of steps in which each step creates the context for the next one and each next wholeness is derived from the previous wholeness Our billions of beautiful and unique human faces come from one class of sequences Driven by these sequences an initial cell differentiates again and again until beautiful and complex human beings emerge infinitely various always harmonious Making changes in society so that streets buildings rooms gardens and towns may be generated by hundreds of such sequences requires massive transformations This book is the first blueprint of those transformations
