Intimate Partner Violence, Risk and Security Kate Fitz-Gibbon, Sandra Walklate, Jude McCulloch, JaneMaree Maher, 2018-06-14 This edited collection addresses intimate partner violence risk and security as global issues Although intimate partner violence risk and security are intimately connected they are rarely considered in tandem in the context of global security Yet intimate partner violence causes widespread physical sexual and or psychological harm It is the most common type of violence against women internationally and is estimated to affect 30 per cent of women worldwide Intimate partner violence has received significant attention in recent years animating political debate policy and law reform as well as scholarly attention In bringing together a range of international experts this edited collection challenges status quo understandings of risk and questions how we can reposition the risk of IPV and particularly the risk of IPH as a critical site of global and national security It brings together contributions from a range of disciplines and international jurisdictions including from Australia and New Zealand United Kingdom Europe United States North America Brazil and South Africa The contributions here urge us to think about perpetrators in more nuanced and sophisticated ways with chapters pointing to the structural and social factors that facilitate and sustain violence against women and IPV Contributors point out that states not only exacerbate the structural conditions producing the risks of violence but directly

coerce and control women as both citizens and non citizens States too should be understood as collaborators and facilitators of intimate partner violence Effective action against intimate partner violence requires sustained responses at the global state and local levels to end gender inequality Critical to this end are environmental issues poverty and the divisions often along race and ethnic lines underpinning other dimensions of social and economic inequality
