FEMA officials approached the National Research Council's NRC Water Science and Technology Board WSTB and requested this study. The NRC responded by forming the ad hoc Committee on Levee and the National Flood Insurance Program Improving Policies and Practices charged to examine current FEMA treatment of levees within the NFIP and provide advice on how those levee-related policies and activities could be improved. The study addressed four broad areas: risk analysis, flood insurance risk reduction, and risk communication regarding how levees are considered in the NFIP. Specific issues within these areas include current risk analysis and mapping procedures behind accredited and non-accredited levees, flood insurance pricing, and the mandatory flood insurance purchase requirement mitigation options to reduce risk for communities with levees, flood risk communication efforts, and the concept of shared responsibility. The principal conclusions and recommendations are highlighted in this report.

Geotechnical Engineering of Dams, 2nd Edition Robin Fell, Patrick MacGregor, David Stapledon, Graeme Bell, Mark Foster, 2014-11-21. Geotechnical Engineering of Dams 2nd edition provides a comprehensive text on the geotechnical and geological aspects of the investigations for and the design and construction of new dams and the review and assessment of existing dams. The main emphasis of this work is on embankment dams but much of the text particularly those parts related to geology can be used for concrete gravity and arch dams. All phases of investigation design and construction are covered. Detailed descriptions are given from the initial site assessment and site investigation program through to the preliminary and detailed design phases and ultimately the construction phase. The assessment of existing dams including the analysis of risks posed by those dams is also discussed. This wholly revised and significantly expanded 2nd edition includes a lengthy new appendix on the assessment of the likelihood of failure of dams by internal erosion and piping. This valuable source on dam engineering incorporates the 200 years of collective experience of the authors in the subject area. Design methods are presented in combination with their theoretical basis to enable the reader to develop a proper understanding of the possibilities and limitations of a method. For its practical well-founded approach, this work can serve as a useful guide for professional dam engineers and engineering geologists and as a textbook for university students.

Reliability-Based Design in Geotechnical Engineering Kok-Kwang Phoon, 2008-04-25 Reliability based design is the only engineering methodology currently available which can ensure self consistency in both physical and probabilistic terms It is also uniquely compatible with the theoretical basis underlying other disciplines such as structural design It is especially relevant as geotechnical design becomes subject to increasing codification and to code harmonization across national boundaries and material types Already some codes of practice describe the principles and requirements for safety serviceability and durability of structures in reliability terms This book presents practical computational methods in concrete steps that can be followed by practitioners and students It also provides geotechnical examples illustrating reliability analysis and design It aims to encourage geotechnical engineers to apply reliability based design in a realistic context that recognises the complex variabilities in geomaterials and model uncertainties arising from a profession steeped in empiricism By focusing on learning through computations and examples this book serves as a valuable reference for engineers and a resource for students **Embankments, Dams, and Slopes**, 2007 *Internal Erosion in Earthdams, Dikes and Levees* Stéphane Bonelli, Cristina Jommi, Donatella Sterpi, 2018-08-31 This book gathers the peer reviewed contributions presented at the 26th Annual Meeting of the European Working Group on Internal Erosion in Embankment Dams Levees and Dikes and their Foundations EWG IE held in Milano Italy on 10 13 September 2018 The meeting served as a fertile platform for discussion sharing sound knowledge and introducing novel ideas on issues related to soil internal erosion in water retaining structures The contributions encompass various aspects of laboratory techniques and findings modelling and design criteria as well as prevention measures and field assessment The book is a valuable up to date tool that provides an essential overview of the subject for scientists and practitioners alike and inspires further investigations and research
