Venema Solutions Manual:

Introduction to Tropical Fish Stock Assessment: Manual Per Sparre, S. C. Venema, Food and Agriculture Organization of the United Nations, 1992 Securing Citrix XenApp Server in the Enterprise Tariq Azad, 2008-08-08 Citrix Presentation Server allows remote users to work off a network server as if they weren't remote. That means incredibly fast access to data and applications for users, no third party VPN connection and no latency issues. All of these features make Citrix Presentation Server a great tool for increasing access and productivity for remote users. Unfortunately, these same features make Citrix just as dangerous to the network it's running on. By definition, Citrix is granting remote users direct access to corporate servers; achieving this type of access is also the holy grail for malicious hackers. To compromise a server running Citrix Presentation Server, a hacker need not penetrate a heavily defended corporate or government server. They can simply compromise the far more vulnerable laptop, remote office or home office of any computer connected to that server by Citrix Presentation Server. All of this makes Citrix Presentation Server a high value target for malicious hackers. And although it is a high value target, Citrix Presentation Servers and remote workstations are often relatively easily hacked because they are often times deployed by overworked system administrators who haven't even configured the most basic security features offered by Citrix. The problem, in other words, isn't a lack of options for securing Citrix instances; the problem is that administrators aren't using them. eWeek, October 2007. In support of this assertion, security researcher Petko D. Petkov aka pdp said in an Oct 4 posting that his recent testing of Citrix gateways led him to tons of wide open Citrix instances, including 10 on government domains and four on military domains. The most comprehensive book published for system administrators providing step by step instructions for a secure Citrix Presentation Server. Special chapter by security researcher Petko D. Petkov aka pdp detailing tactics used by malicious hackers to compromise Citrix Presentation Servers. Companion Web site contains custom Citrix scripts for administrators to install, configure and troubleshoot Citrix Presentation Server.

Introduction to Tropical Fish Stock Assessment Per Sparre, S. C. Venema, 1998. In Part 1, Manual, a selection of methods on fish stock assessment is described in detail with examples of calculations. Special emphasis is placed on methods based on the analysis of length frequencies. After a short introduction to statistics, it covers the estimation of growth parameters and mortality rates, virtual population methods including age based and length based cohort analysis, gear selectivity, sampling, prediction models including Beverton and Holt's yield per recruit model and Thompson and Bell's model, surplus production models, multispecies and multifleet problems, the assessment of migratory stocks, a discussion on stock recruitment relationships and demersal trawl surveys including the swept area method. The manual is completed with a review of stock assessment where an indication is given of methods to be applied at different levels of availability of input data, a review of relevant computer programs produced by or in cooperation with FAO and a list of references including material for further reading. In Part 2, Exercises, a number of exercises is given with solutions. The exercises are directly related to the various
