Regarding the Mind, Naturally Marcin Milkowski, Konrad Talmont-Kaminski, 2014-08-11 Naturalism is currently the most vibrantly developing approach to philosophy with naturalised methodologies being applied across all the philosophical disciplines One of the areas naturalism has been focussing upon is the mind traditionally viewed as a topic hard to reconcile with the naturalistic worldview A number of questions have been pursued in this context What is the place of the mind in the world How should we study the mind as a natural phenomenon What is the significance of cognitive science research for philosophical debates In this book philosophical questions about the mind are asked in the context of recent developments in cognitive science evolutionary theory psychology and the project of naturalisation Much of the focus is upon what we have learned by studying natural mental mechanisms as well as designing artificial ones In the case of natural mental mechanisms this includes consideration of such issues as the significance of deficits in these mechanisms for psychiatry The significance of the evolutionary context for mental mechanisms as well as questions regarding rationality and wisdom is also explored Mechanistic and functional models of the mind are used to throw new light on discussions regarding issues of explanation reduction and the realisation of mental phenomena Finally naturalistic approaches are used to look anew at such traditional
