Wissenschaft und Kunst der Modellierung Bernhard Thalheim,Ivor Nissen,2015-07-01 Models are one of the main instruments in scientific research Disciplines have developed a different understanding of the notion function and purpose of models We thus need a systematic approach in order to understand to build and to use models This book gives an insight into the disciplinary modelling know how and is a starting point to develop a general model approach that generalises and combines for an interdisciplinary use *Digital Scholarly Editions Beyond Text* Tessa Gengnagel,2024-02-07 Scholarly editions contextualize our cultural heritage Traditionally methodologies from the field of scholarly editing are applied to works of literature e g in order to trace their genesis or present their varied history of transmission What do we make of the variance in other types of cultural heritage How can we describe record and reproduce it systematically From medieval to modern times from image to audiovisual media the book traces discourses across different disciplines in order to develop a conceptual model for scholarly editions on a broader scale By doing so it also delves into the theory and philosophy of the digital humanities as such **Cardio-Physiology Challenging Empirical Philosophy** Brigitte Lohff,Jochen Schaefer,2022-08-10 With this volume of three essays the authors want to create an opportunity for dialogue between different disciplines by taking a closer look at three cardio physiological examples In the essays presented we will look at the exploration of different cardiological topics from the 20th century all of which have contributed to a better understanding of certain aspects of cardiac activity Not only do these insights provide a more complete picture of these cardiac phenomena but it is also within this context that we can look for and into the patterns of regularities which govern this living organism Our goal is to stimulate a dialogue on the philosophy of science in the spirit of Hans Reichenbach **Modelling Human Behaviour in Landscapes** Oliver Nakoinz,Daniel Knitter,2016-04-08 This volume is designed as a 12 lecture textbook which can serve as a course companion self teaching guide and handbook for basic concepts Each lecture comprises 20 pages in which the methods are introduced examples shown and the code is given All examples are computed with open source software mainly R and with archaeological data available from the book s website The book does not describe elaborated high end models but rather very basic modelling concepts that serve as components in more complex models The book enables the reader to construct such models by themselves and be sensitive for certain problems In addition it gives hints for the interpretation of the results Students are usually quick to apply fancy methods yet fail in the proper interpretation due to a lack of understanding of the underlying principles This problem is addressed by the proposed book through three concepts 1 Command line software forces the students to first learn some details before they are able to produce results on their own 2 The book is focused on principles and methods When the students understand a few basic principles they have far better access to a wide range of related methods 3 Examples of poor analysis highlight common pitfalls The volume attempts to be an applied minimalistic and efficient textbook and is based upon several successful courses *Mathematische Modellierung*

bei Platon zwischen Thales und Euklid Claas Lattmann, 2019-03-18 Wissenschaftliche Mathematik ist eine der wichtigsten Kulturleistungen des antiken Griechenland. Doch wann und wo genau hatte sie ihren Ursprung? Die Einschätzung der Antike zwischen Thales und Euklid habe Platon eine maßgebliche Rolle gespielt, gilt als Fiktion. Diese Studie wirft einen neuen modelltheoretischen Blick auf die Zeugnisse und erweist im Gegenteil, dass in der Tat Platon als Schöpfer von axiomatisch deduktiver Mathematik gelten muss. Grundlage der Analyse ist eine Neubewertung des Diagramms als zentralen Charakteristikums griechischer Mathematik aus modelltheoretischer Perspektive. Eine Untersuchung der Quadratverdopplung im Menon und zur Wurfelverdopplung Delisches Problem zeigt, dass eine theoretische Mathematik erstmals für Platon bezeugt ist. Dass weiter auch nur Platon ein Motiv hatte, sie zu erfinden, ergibt sich aus der Explikation von Platons Theorie der mathematischen Modellierung anhand des Liniengleichnisses in Verbindung mit dem Nachweis, dass der Timaios als deren praktische Umsetzung fungiert. Die Studie bietet wissenschaftshistorisch neue Einsichten zur Entstehung von Mathematik, philosophiehistorisch zu Platons Ontologie und Epistemologie und modelltheoretisch zu Theorie und Praxis von Modellierung.

A Method to Identify Energy Efficiency Measures for Factory Systems Based on Qualitative Modeling Manuela Krones, 2017-05-11 Manuela Krones develops a method that supports factory planners in generating energy efficient planning solutions. The method provides qualitative description concepts for factory planning tasks and energy efficiency knowledge as well as an algorithm based linkage between these measures and the respective planning tasks. Its application is guided by a procedure model which allows a general applicability in the manufacturing sector. The results contain energy efficiency measures that are suitable for a specific planning task and reveal the roles of various actors for the measures implementation.

Modelling to Program Ajantha Dahanayake, Oscar Pastor, Bernhard Thalheim, 2021-03-30 This book constitutes revised selected papers from the Second International Workshop on Modelling to Program M2P 2020 held in Lappeenranta, Finland, in March 2020. The 10 papers presented were thoroughly reviewed and selected from 24 submissions. The papers provide a discussion on novel approaches to programming based on modelling approaches such as model driven development, MDE, MDA, MDD and conceptual model programming and their future developments. The topics of the papers include notions of models that can be understood and used as programs, models at runtime, advanced conceptual modelling, conceptual model programming, modelling foundation, transformation of models to programs, model suites, ensembles for programmers, modelling as the first step to programming and its revisions, advanced model driven programming and software modernisation, modelling in applications.
