Wka 2013 Tech Manual:

Root, Tuber and Banana Food System Innovations Graham Thiele, Michael Friedmann, Hugo Campos, Vivian Polar, Jeffery W. Bentley, 2022-04-06 This open access book describes recent innovations in food systems based on root tuber and banana crops in developing countries. These innovations respond to many of the challenges facing these vital crops linked to their vegetative seed and bulky and perishable produce. The innovations create value, food jobs and new sources of income while improving the wellbeing and quality of life of their users. Women are often key players in the production, processing and marketing of roots, tubers and bananas, so successful innovation needs to consider gender. These crops and their value chains have long been neglected by research and development, hence this book contributes to filling in the gap. The book features many outcomes of the CGIAR Research Program in Roots, Tubers and Bananas (RTB) which operated from 2012-21, encompassing many tropical countries, academic and industry partners, multiple crops and major initiatives. It describes the successful innovation model developed by RTB that brings together diverse partners and organizations to create value for the end users and to generate positive economic and social outcomes. RTB has accelerated the scaling of innovations to reach many end users cost effectively. Though most of the book's examples and insights are from Africa, they can be applied worldwide. The book will be useful for decision makers designing policies to scale up agricultural solutions for researchers and extension specialists seeking practical ideas and for scholars of innovation.

Presented in three parts, the first addresses cassava diversity and distribution, sustainable production and cultivation practices and root processing innovations of the crop. Cassava trade policies and economic value chains, food safety and use of cassava and agro-industrial cassava products are addressed in the second part. The third part focuses on bioeconomy aspects: cassava waste quality assessment, toxicology, sanitary practices, environmental risk assessment as well as sustainable management strategies for cassava waste using biotechnological and industrial advances. Addressing the need for a unified and standardized approach for the trade management and utilization of cassava genetic resources, finished products and cassava processing wastes, the
