The Theory Of Opposites:

Apophatic Elements in the Theory and Practice of Psychoanalysis David Henderson, 2013-10-17 How can the psychotherapist think about not knowing Is psychoanalysis a contemplative practice This book explores the possibility that there are resources in philosophy and theology which can help psychoanalysts and psychotherapists think more clearly about the unknown and the unknowable The book applies the lens of apophasis to psychoanalysis Illuminati Bible of Divine Light: Part one Sorin Cerin, 2021-07-10 With the appearance of my first philosophical studies but also of aphorisms I initially published the book entitled Bible of the Light and then a more complete form of the book Bible of the Light was the book entitled The Illuminati Bible so that in present to publish the full form of the Bible which I felt that it will be perfected with the help of God and which I decided to call the Illuminati Bible of Divine Light Some will wonder why I chose this name of The Illuminati Bible starting with that book published in 2014 the content of which is also in this book called the Illuminati Bible of Divine Light which in turn contains many other parts Simple Firstly because I wanted to help in Good the Karma of this World because Illuminati and Enlightenment are spoken of in negative terms and secondly because Illuminati comes from Enlightenment and true Enlightenment cannot bring the Evil nor can it be the Evil vile True Enlightenment must be based only on Good and never on bringing the Evil as the supreme Wickedness Therefore in order to improve the Karma of Mankind I show that Enlightenment does not consist in Wickedness but in combating Wickedness The enlightened ones cannot be a hidden group of people who lead humanity out of the shadows committing all sorts of evils and abuses to maintain power These people are by no means Enlightened but Dark If there really are some in such a situation then they use the term Illuminati or Enlightened falsely How just as Dark are those who dirtyly attack on the true Illuminati or Enlightened only out of obscure interests of a religious nature for fear that the Enlightened ones might open the souls of the People and show them the Way to the Truth from which some high prelates that are at the head of certain churches flee who are afraid that if the Truth would be found they will lose both their financial and their decision making power I believe that the future will belong to those truly Enlightened the true Illuminati A thing is to use Evil to bring through it Good and another is to use Evil to bring through it the Wickedness The true Enlightened and not Dark are those who understand that the Evil can only be used for Good when he can do it and the Good only for the Evil less Evil when the Good itself can lead to destruction disaster or pain The real Bad People the Dark Ones are the ones who use both Good and Evil to do as much as possible Evil and not Good Mankind must understand that the Evil and Good the God and the Devil are an Entity with two distinct characteristics an Entity that defines our True God that is our Creator Factor and Unique Incidentally Therefore in order to improve the Karma of this World we will have to pray to the Universal Consciousness formed by the Universal Pure Language That is to pray to the Divine Light of all the Worlds the Supreme God of Intelligence which to inspire our thoughts so that to use in moderation both Good and Evil for the ultimate purpose of doing and bringing through us as much as possible Good

Why didn't I let in continuation the name of the Illuminati Bible and to this new much deeper work of the Bible and call it the Illuminati Bible of Divine Light Because compared to the other book called the Illuminati Bible the Illuminati Bible of Divine Light contains in addition to the content of that book many other new chapters that appeared with the new Wisdom Collections or with the final form of the Coaxialism Sorin Cerin

Thinking in Opposites Paul Roubiczek, 2024-03-08 First published in 1952 Thinking in Opposites insists on the need for a carefully thought out rather than a merely authoritarian basis for faith but also insists that an indispensable preliminary is to know the laws which govern and limit the scope of human thinking in relation to three areas the external world as it is the internal world of feeling and the interrelation of each of these with the other This book is not a technical work in philosophy and the theory of knowledge but it deals with problems in those fields which have usually been handled only in technical language Therefore this is a book both for the expert and for the intelligent and thoughtful layman for the man who has a sense of responsibility for what he believes and who is able to justify his faith amid the chaos of our times

A General Theory of Entropy Kofi Kissi Dompere, 2019-08-02 This book

presents an epistemic framework for dealing with information knowledge and certainty uncertainty problems within the space of quality quantity dualities It bridges between theoretical concepts of entropy and entropy measurements proposing the concept and measurement of fuzzy stochastic entropy that is applicable to all areas of knowing under human cognitive limitations over the epistemological space The book builds on two previous monographs by the same author concerning theories of info statics and info dynamics to deal with identification and transformation problems respectively The theoretical framework is developed by using the toolboxes such as those of the principle of opposites systems of actual potential polarities and negative positive dualities under different cost benefit time structures The category theory and the fuzzy paradigm of thought under methodological constructionism reductionism duality are used in the fuzzy stochastic and cost benefit spaces to point to directions of global application in knowing knowledge and decision choice actions Thus the book is concerned with a general theory of entropy showing how the fuzzy paradigm of thought is developed to deal with the problems of qualitative quantitative uncertainties over the fuzzy stochastic space which will be applicable to conditions of soft hard data fact evidence and knowledge over the spaces of problem solution dualities decision choice actions in sciences non sciences engineering and planning sciences to abstract acceptable information knowledge elements

The Theory of Categorical Conversion Dompere, Kofi Kissi, 2017-09-17 The Theory of Categorical Conversion is advanced by Professor Kofi Kissi Dompere as mathematical philosophical and game theoretic foundations to solve the problem of socio natural transformation as governed by some internal process in relation to Marx Schumpeter and Nkrumah Dompere's methodology is based on the Africentric principles of opposites made up of actual potential polarity negative positive duality with relational continuum and unity under cost benefit rationality and Asantrofi Anoma principle supported by fuzzy paradigm of thought Socio natural transformations are seen in terms of game theories in a fuzzy stochastic space admitting of defective deceptive information structures in quality quantity space within the subjective objective duality The main premise of the monograph is that there exists a set of necessary and sufficient conditions for internal self transformation The necessary conditions are made up of categorial moments and categorial transfer functions forming the domain of control instrumentation in creating the sufficient conditions for categorial conversion processes Dompere presents an important methodological framework for the study and construction of the theories of socioeconomic development and political change as well as info dynamics connecting knowledge sciences innovation and engineering to the space of knowing under qualitative quantitative transformational dynamics with defective deceptive information structures in the games for power and dominance by duals and poles in conflicts The necessary conditions of socio natural transformation are internally derived based on the relational structure of matter energy information activities within the dynamics of qualitative dispositions of dualities of actual potential polarities The theory consists of category formation showing ontological epistemological categories and categorial dynamics shows elemental conversions of categorial varieties in a continuum The logical tools and the paradigm of thought for the

theoretical development of Nkrumah's framework involve self excitement self correction and self control systems induced by internal contradictions The set of necessary conditions constitutes the natural necessity that constrains cognitive freedom in socio natural transformations Had this conceptual system been familiar to economists and social scientists the construct of the theories of socioeconomic development and transformations would have been increasingly successful

The Theory of Problem-Solution Dualities and Polarities Kofi Kissi Dompere, 2022-04-25 This book is concerned with the development of the understanding of the relational structures of information knowledge decision choice processes of problems and solutions in the theory and practice regarding diversity and unity principles of knowing science non science and information knowledge systems through dualistic polar conditions of variety existence and nonexistence It is a continuation of the sequence of my epistemic works on the theories on fuzzy rationality info statics info dynamics entropy and their relational connectivity to information language knowing knowledge cognitive practices relative to variety identification problem solution dualities variety transformation problem solution dualities and variety certainty uncertainty principle in all areas of knowing and human actions regarding general social transformations It is also an economic theoretic approach in understanding the diversity and unity of knowing and science through neuro decision choice actions over the space of problem solution dualities and polarities The problem solution dualities are argued to connect all areas of knowing including science and non science social science and non social science into unity with diversities under neuro decision choice actions to support human existence and nonexistence over the space of static dynamic dualities The concepts of diversity and unity are defined and explicated to connect to the tactics and strategies of decision choice actions over the space of problem solution dualities The concepts of problem and solution are defined and explicated not in the space of absoluteness but rather in the space of relativity based on real cost benefit conditions which are shown to be connected to the general parent offspring infinite process where every solution generates new problem's which then generates a search for new solutions within the space of minimum maximum dualities in the decision choice space under the principle of non satiation over the space of preference non preference dualities with analytical tools drawn from the fuzzy paradigm of thought which connects the conditions of the principle of opposites to the conditions of neuro decision choice actions in the zone of variety identifications and transformations The Monograph would be useful to all areas of Research Learning and Teaching at Advanced Stages of Knowing and Knowledge Production

The Concept of Woman Prudence Allen, 2006-01-26 The culmination of a lifetime's scholarly work this study by Sister Prudence Allen traces the concept of woman in relation to man

in Western thought from ancient times to the present This volume is the second in her study in which she explores claims about sex and gender identity in the works of over fifty philosophers both men and women in the late medieval and early Renaissance periods

Mrs. Beeton's Book of Household Management Mrs. Beeton (Isabella Mary),1909 The Coaxialism Sorin Cerin,2011-09-19 Complete reference edition A new philosophical system created by Sorin Cerin Its principles are 1 The only true philosophy is the one accepting that Man does neither know the Truth and implicitly nor philosophy 2 Man shall never neither know the Absolute Truth nor the Absolute Knowledge because his entire existence is based on the Illusion of Life 3 Any philosophical system or philosopher which will pretend that says the Truth is liar 4 The Coaxialism is by excellence the philosophy that does NOT pretend that it speaks the Truth yet that accepts applications which sustain the reporting of the Illusion of Life to the Truth 5 The Essence of the Truth consists in its reflection at the Elements appeared before its as are those of Open Knowledge coming from the State of Fact 6 The Coaxialism accepts operation with the opposites of the opposites of the Existence with or without to be necessary the reporting to it determining the Coaxiology 7 Each Opposite has at Infinite another Opposite identical to it 8 With as an Opposite is farther so between it and the Element opposable are inserted a larger number of opposites with so the similarities between them will be more pronounced and with as the number of opposites intercalated between the two Elements will be smaller with so the contrasts between them will be more pronounced 9 How can we speak of Universes without substrate in Existence we can speak of the Knowledge without substrate in essence hence without subject 10 The factor will always be the opposite of the infinity face to which it will report as finite just as the Knowledge is reported to the Un knowledge and the life to Death In understanding coaxial the Factor will be equivalent to God the Unique Creator but and by chance face of his worlds 11 In the worlds of each Creator Factor and Unique by Chance it will reflect all other Creator Factors and Unique by Chance under form of numbers from ONE which is the Primordial Factor up to an infinite minus ONE of the Creator Factors and Unique Chance

Aristotle's Physics Book I Diana Quarantotto,2018-01-11 This book provides a comprehensive and in depth study of Physics I the first book of Aristotle s foundational treatise on natural philosophy While the text has inspired a rich scholarly literature this is the first volume devoted solely to it to have been published for many years and it includes a new translation of the Greek text Book I introduces Aristotle s approach to topics such as matter and form and discusses the fundamental problems of the study of natural science examining the theories of previous thinkers including Parmenides Leading experts provide fresh interpretations of key passages and raise new problems The volume will appeal to scholars and

students of ancient philosophy as well as to specialists working in the fields of philosophy and the history of science

Mao's Road to Power: Revolutionary Writings, 1912-49: v. 6: New Stage (August 1937-1938) Zedong Mao, Stuart Schram, 2015-07-17 By 1936 after a decade of Civil War and even before the Xi an Incident Mao Zedong had begun talking about a New Stage of cooperation between the Guomindang and the Communist Party With the establishment of a framework for cooperation between the two parties and as Japan began its brutal war against China Mao began to develop this theme more systematically in both the political and military spheres This volume documents the evolution of Mao s thinking in this area that found its culmination in his long report to the Sixth Enlarged Plenum of the Central Committee in October 1938 explicitly entitled On the New Stage and presented here in its entirety It was also during this period that Mao delivered a course of lectures on dialectical materialism after reading and annotating a number of works on Marxist theory by Soviet and Chinese authors These lectures from which On Practice and On Contradiction were later extracted are also translated here in their entirety

The Theory of the Knowledge Square: The Fuzzy Rational Foundations of the Knowledge-Production Systems Kofi Kissi Dompere, 2012-08-28 The monograph is about a meta theory of knowledge production process and the logical pathway that connects the epistemic possibility to the epistemic reality It examines the general conditions of paradigms for information processing and isolates the classical and fuzzy paradigms for comparative analysis The sets of conditions that give rise to them are defined stated and analyzed to abstract the corresponding sets of laws of thought The fuzzy paradigm with its corresponding logic and mathematics is related to inexact symbolism for the defective information structure where the results of the knowledge production must satisfy the epistemic conditionality composed of fuzzy conditionality and fuzzy stochastic conditionality under the principle of logical duality with continuum The classical paradigm with its corresponding logic and mathematics is related to exact symbolism for exact information structure where the vagueness component of the defectiveness is assumed away and where the results of the knowledge production must satisfy no epistemic conditionality or at the maximum only the stochastic conditionality under the principle of logical dualism with excluded middle It is argued that the epistemic path that links ontological space to the epistemological space is information The ontological space is taken as the primary category of reality while the epistemological space is shown to be a derivative Such information is universally defective and together with assumptions imposed guides the development of paradigms with their laws of thought logic of reasoning mathematics and computational techniques The relational structure is seen in terms of logical trinity with a given example as matter information energy transformational trinity which is supported by the time trinity of past present future relationality The book is written for professionals researchers and students working in philosophy of science decision choice theories economics sciences computer science engineering cognitive psychology and researchers working on or interested in fuzzy paradigm fuzzy logic fuzzy decisions and phenomena of vagueness and ambiguities fuzzy mathematics fuzzy stochastic processes and theory of

knowledge It is further aimed at research institutions and libraries The subject matter belongs to extensive research and development taking place on fuzzy phenomena and the debate between the fuzzy paradigm and the classical paradigm relative to informatics synergetic science and complexity theory The book will have a global appeal and across disciplines Its strength besides the contents is the special effort that is undertaken to make it relevant and accessible to different areas of sciences and knowledge production
