The Tropical Rain Forest An Ecological Study

H. Lieth, M.J.A. Werger

The Tropical Rain Forest An Ecological Study:

The Tropical Rain Forest P. W. Richards, 1996-08-08 The rain forests of tropical America Africa Asia and Australia are rapidly vanishing With a focus on ecology this book discusses rain forests as complex natural systems that are continually changing in response to climate and soil conditions as well as to shifting cultivation logging and other human activities The completely revised edition includes new chapters on climate contributed by R P D Walsh microclimates and hydrology contributed by R P D Walsh soils contributed by I C Baillie and an appendix on quantitative methods contributed by P Greig Smith This book first published in 1952 is now a classic and represents an important record of what has become of the rain forest in the twentieth century and will be meaningful reading for botanists ecologists tropical biologists conservationists and general readers The Tropical Rain Forest P. W. Richards, 1952 **The Tropical Rain Forest, an Ecological Study, by P. W. Richards,...** P. W. Richards, 1952 **The Tropical Rain Forest** Paul W. Richards, 1964 The Tropical Rain Forest Paul Westmacott Richards, 1976 **The Tropical Rain Forest** P. W. Richards, 1957 Tropical Rain Forests Richard T. Corlett, Richard B. Primack, 2011-03-03 The first edition of Tropical Rain Forests an Ecological and Biogeographical Comparison exploded the myth of the rain forest as a single uniform entity In reality the major tropical rain forest regions in tropical America Africa Southeast Asia Madagascar and New Guinea have as many differences as similarities as a result of their isolation from each other during the evolution of their floras and faunas This new edition reinforces this message with new examples from recent and on going research After an introduction to the environments and geological histories of the major rain forest regions subsequent chapters focus on plants primates carnivores and plant eaters birds fruit bats and gliding animals and insects with an emphasis on the ecological and biogeographical differences between regions This is followed by a new chapter on the unique tropical rain forests of oceanic islands The final chapter which has been completely rewritten deals with the impacts of people on tropical rain forests and discusses possible conservation strategies that take into account the differences highlighted in the previous chapters This exciting and very readable book illustrated throughout with color photographs will be invaluable reading for undergraduate students in a wide range of courses as well as an authoritative reference for graduate and professional ecologists conservationists and interested amateurs The Tropical Rain Forest Paul W. Richards, 1964 Tropical Rain Forest Ecosystems H. Lieth, M.J.A. Werger, 2012-12-02 After publication of the first volume of the Tropical Rain Forest the International Journal of Mycology and Lichenology commented This is a welcome addition to the literature on the ecology of tropical rain forests The book provides a wealth of data and stimulating discussions and is of great interest to ecologists interested in tropical areas Whereas the first volume dealt with system ecological aspects such as community organization and processes the present volume concentrates on biogeographical aspects such as species composition diversity and geographical variation Recent ecological research in the tropical rain forest has greatly extended our understanding of biogeographical patterns of variation in the various groups of organisms

and has revealed many of the ecological and evolutionary forces that led to the present patterns of variation. Many important systems of co evolution between the tropical rain forest ecosystems have also come to light and the loss of species and related damage is better understood in quantitative terms. This volume presents a comprehensive review of these and other features of the rain forest ecosystem structure and the ecological processes operating that system. General chapters on abiotic and biotic factors are followed by specific chapters on all major groups of organisms. Prospects for the future are discussed and research needs clearly stated. Also the human exploitation of the system its effects and its limits are discussed. The book is extensively illustrated by photographs graphs and tables and comprehensive bibliographies follow each chapter. Author systematic and subject indices complete the book. It is a must for all ecologists agriculturists foresters agronomists hydrologists soil scientists entomologists human ecologists nature conservationists and planners dealing with tropical areas. Biologists and environmentalists will also find the volume of great interest.

Tropical Rain Forest Ecosystems Frank B. Golley, 1983 *Tropical Rainforests* Eldredge Bermingham, Christopher W. Dick, Craig Moritz, 2005-08. Synthesizing theoretical empirical analyses of the processes that help shape these unique ecosystems. *Tropical Rainforests* looks at the effects of evolutionary histories past climate change ecological dynamics on the origin maintenance of tropical rainforest communities. *Tree Demography in the Tropical Rain Forest of Guyana* Roderick Jan Zagt, 1997 *The Forest Farms of Kandy* D.J. McConnell, K.A.E. Dharmapala, S.R. Attanayake, 2017-03-02. Throughout the tropical world especially in South and Southeast Asia tropical America Africa and Oceania there exists a range of forest garden farming systems. These are small low input but productive and sustainable family units of highly diversified trees palms bushes and vines with few conventional field crops or livestock. Providing a survey of these systems around the world and an in depth analysis of the farms around Kandy Sri Lanka this book offers an economic and ecological description and evaluation of this ancient agroforestry system and its relationship to a wide range of global agro development and environmental problems. Guided by a table that lists some 30 socio economic and social criteria by which all farming systems can and should be evaluated the book presents persuasive evidence supported by comprehensive references. It also examines historical and archaeological findings in order to assess the role these tropical forests played in the general adoption of agricultural farming.

An ecological study of tropical rain forest of Taiwan (2) Lo-min Chang, 1965 **The Plant Diversity of Malesia** P. Baas, K. Kalkman, R. Geesink, 2012-12-06. Although the only publication with a realistic claim to the title *The plant diversity of Malesia* is *Flora Malesiana* itself we have hesitatingly chosen this title for the present proceedings volume. Past present and future work on the *Flora Malesiana* project was the subject of a successful symposium held in August 1989. This book contains only a selection of the papers presented at that meeting yet it covers a much greater diversity of themes than just the inventory of botanical diversity. It even goes beyond the boundaries of the vast *Flora Malesiana* region in several of its chapters. The role of the founder of the *Flora Malesiana* Project Professor C G G J van Steenis repeatedly recurs in several chapters not

only as director of and contributor to the project but also as a pioneer in the fields of Malesian vegetation conservation and biogeography and as an enlightened systematist whose ideas and practical recommendations for taxonomic delimitation still largely apply Botanical information made available in regional and local floras is of vital importance for applications such as the exploitation of natural forests on a sustainable yield basis for establishing gene banks for the benefit of agriculture forestry and horticulture and not in the least for nature conservation Several chapters are devoted to these themes Floristic studies are also at the basis of the biogeographical essays and vegetation studies included in this book

Costa Rican Natural History Daniel H. Janzen, 2018-12-14 This volume is a synthesis of existing knowledge about the flora and fauna of Costa Rica The major portion of the book consists of detailed accounts of agricultural species vegetation amphibians reptiles mammals birds and insects This is an extraordinary virtually unique work The tremendous amount of original previously unpublished firsthand information is remarkable Peter H Raven Director Missouri Botanical Garden An essential resource for anyone interested in tropical biology It can be used both as an encyclopedia a source of facts on specific organisms and as a source of ideas and generalizations about tropical ecology Alan P Smith Ecology

The Ecology of Trees in the Tropical Rain Forest I. M. Turner, 2001-07-05 Our knowledge of the ecology of tropical rain forest trees is limited with detailed information available for perhaps only a few hundred of the many thousand of species that occur Yet a good understanding of the trees is essential to unravelling the workings of the forest itself This book aims to summarise contemporary understanding of the ecology of tropical rain forest trees The emphasis is on comparative ecology an approach that can help to identify possible adaptive trends and evolutionary constraints and which may also lead to a workable ecological classification for tree species conceptually simplifying the rain forest community and making it more amenable to analysis
