Topics in General Topology K. Morita, J.-I. Nagata, 1989-08-04 Being an advanced account of certain aspects of general topology the primary purpose of this volume is to provide the reader with an overview of recent developments The papers cover basic fields such as metrization and extension of maps as well as newly developed fields like categorical topology and topological dynamics Each chapter may be read independently of the others with a few exceptions It is assumed that the reader has some knowledge of set theory algebra analysis and basic general topology Topics in General Topology Kiiti Morita, Jun-iti Nagata, 1989 Being an advanced account of certain aspects of general topology the primary purpose of this volume is to provide the reader with an overview of recent developments The papers cover basic fields such as metrization and extension of maps as well as newly developed fields like categorical topology and topological dynamics Each chapter may be read independently of the others with a few exceptions It is assumed that the reader has some knowledge of set theory algebra analysis and basic general topology Modern General Topology J.-I. Nagata, 1985-11-01 This classic work has been fundamentally revised to take account of recent developments in general topology The first three chapters remain unchanged except for numerous minor corrections and additional exercises but chapters IV VII and the new chapter VIII cover the rapid changes that have occurred since 1968 when the first edition appeared The reader will find many new topics in chapters IV VIII e g theory of Wallmann Shanin's compactification realcompact space various generalizations of paracompactness generalized metric spaces Dugundji type extension theory linearly ordered topological space theory of cardinal functions dyadic space etc that were in the author's opinion mostly special or isolated topics some twenty years ago but now settle down into the mainstream of general topology Point-set Topology With Topics: Basic General Topology For Graduate Studies Robert Andre, 2024-01-19 This textbook can be used as introduction to a general topology course at undergraduate and graduate level courses However many parts of this book present topological concepts that apply directly to functional analysis which will be of interest to scholars working in those fields In Part I readers are eased into the main subject matter of general topology being presented with summaries of normed vector spaces and metric spaces Parts II to VI form the core material contained in most Basic General Topology courses After having worked through the most fundamental concepts of topology the reader will be exposed to brief introductions to more specialized or advanced topics of pointset topology These are presented in Part VII in the form of a sequence of chapters many of which can be read or studied independently or in short sequences of two or three chapters provided that the student has mastered the previous sections Chapters related to the more basic ideas of general topology are followed by a collection of concept review questions the answers to which are found in the main body of the text These questions highlight the main concepts presented in that chapter as well as ideas that are often overlooked when first encountered which will help to test the students understanding The efforts required in answering correctly such questions will provide the student with the ability to solve more complex problems in the exercises
