Topological Methods In Hydrodynamics Topological Methods In Hydrodynamics:

Topological Methods in Hydrodynamics Vladimir I. Arnold, Boris A. Khesin, 1999-08-05 The first monograph to treat topological group theoretic and geometric problems of ideal hydrodynamics and magnetohydrodynamics from a unified point of view It describes the necessary preliminary notions both in hydrodynamics and pure mathematics with numerous examples and figures The book is accessible to graduates as well as pure and applied mathematicians working in hydrodynamics Lie groups dynamical systems and differential geometry

Topological Methods in Hydrodynamics Vladimir I. Arnold, Boris A. Khesin, 2008-01-08 The first monograph to treat topological group theoretic and geometric problems of ideal hydrodynamics and magnetohydrodynamics from a unified point of view It describes the necessary preliminary notions both in hydrodynamics and pure mathematics with numerous examples and figures The book is accessible to graduates as well as pure and applied mathematicians working in hydrodynamics Lie groups dynamical systems and differential geometry

Mathematical Problems and Methods of Hydrodynamic Weather Forecasting Vladimir Gordin, 2000-09-20 The material provides an historical background to forecasting developments as well as introducing recent advances The book will be of interest to both mathematicians and physicians the topics covered include equations of dynamical meteorology first integrals non linear stability well posedness of boundary problems non smooth solutions parameters and free oscillations meteorological data processing methods of approximation and interpolation and numerical methods for forecast modelling

Arnold's Problems Vladimir I. Arnold, 2004-06-24 Vladimir Arnold is one of the most outstanding mathematicians of our time Many of these problems are at the front line of current research *Geometric, Algebraic And Topological Methods For Quantum Field Theory - Proceedings Of The 2013 Villa De Leyva Summer School* Alexander Cardona, Hernan Ocampo, Andres F Reyes-lega, Leonardo Cano, 2016-09-06 Based on lectures held at the 8th edition of the series of summer schools in Villa de Leyva since 1999 this book presents an introduction to topics of current interest at the interface of geometry algebra analysis topology and theoretical physics It is aimed at graduate students and researchers in physics or mathematics and offers an introduction to the topics discussed in the two weeks of the summer school operator algebras conformal field theory black holes relativistic fluids Lie groupoids and Lie algebroids renormalization methods spectral geometry and index theory for pseudo differential operators

Nontraditional methods in mathematical hydrodynamics O. V. Troshkin, 1995-03-16 This book discusses a number of qualitative features of mathematical models of incompressible fluids Three basic systems of hydrodynamical equations are considered the system of stationary Euler equations for flows of an ideal nonviscous fluid stationary Navier Stokes equations for flows of a viscous fluid and Reynolds equations for the mean velocity field pressure and pair one point velocity correlations of turbulent flows The analysis concerns algebraic or geometric properties of vector fields generated by these equations such as the general arrangement of streamlines the character and distribution of singular points conditions for their absence or appearance and so on Troshkin carries out a systematic application of the

analysis to investigate conditions for unique solvability of a number of problems for these quasilinear systems. Containing many examples of particular phenomena illustrating the general ideas covered, this book will be of interest to researchers and graduate students working in mathematical physics and hydrodynamics. Fundamentals of Geophysical Hydrodynamics Felix V. Dolzhansky, 2012-10-26. This newly translated book takes the reader from the basic principles and conservation laws of hydrodynamics to the description of general atmospheric circulation. Among the topics covered are the Kelvin Ertel and Rossby Obukhov invariants, quasi-geostrophic equation, thermal wind, singular Helmholtz vortices, derivation of the Navier-Stokes equation, Kolmogorov's flow, hydrodynamic stability and geophysical boundary layers. Generalizing V. Arnold's approach to hydrodynamics, the author ingeniously brings in an analogy of Coriolis forces acting on fluid with motion of the Euler heavy top and shows how this is used in the analysis of general atmospheric circulation. This book is based on popular graduate and undergraduate courses given by F. V. Dolzhansky at the Moscow Institute of Physics and Technology and is the result of the author's highly acclaimed work in Moscow's Laboratory of Geophysical Hydrodynamics. Each chapter is full of examples and figures, exercises and hints motivating and illustrating both theoretical and experimental results. The exposition is comprehensive yet user-friendly, engaging and exploring the broad range of topics for students and researchers in mathematics, physics, meteorology and engineering. Astrophysical Hydrodynamics Steven N. Shore, 2008-06-25. This latest edition of the proven and comprehensive treatment on the topic from the bestselling author of *Tapestry of Modern Astrophysics* has been updated and revised to reflect the newest research results. Suitable for AS0000 and AS0200 courses as well as advanced astrophysics and astronomy lectures, this is an indispensable theoretical backup for studies on celestial body formation and astrophysics. Includes exercises with solutions. **Stability and Wave Motion in Porous Media** Brian Straughan, 2008-12-10. This book describes several tractable theories for fluid flow in porous media. The important mathematical questions about structural stability and spatial decay are addressed. Thermal convection and stability of other flows in porous media are covered. A chapter is devoted to the problem of stability of flow in a fluid overlying a porous layer. Nonlinear wave motion in porous media is analysed. In particular, waves in an elastic body with voids are investigated, while acoustic waves in porous media are also analysed in some detail. A chapter is enclosed on efficient numerical methods for solving eigenvalue problems which occur in stability problems for flows in porous media. Brian Straughan is a professor at the Department of Mathematical Sciences at Durham University, United Kingdom. Geometric Science of Information Frank Nielsen, Frédéric Barbaresco, 2021-07-14. This book constitutes the proceedings of the 5th International Conference on Geometric Science of Information GSI 2021 held in Paris, France, in July 2021. The 98 papers presented in this volume were carefully reviewed and selected from 125 submissions. They cover all the main topics and highlights in the domain of geometric science of information, including information geometry, manifolds of structured data, information and their advanced applications.
