Johnstone, 2014-01-15 Focusing on topos theory's integration of geometric and logical ideas into the foundations of mathematics and theoretical computer science this volume explores internal category theory topologies and sheaves geometric morphisms and other subjects 1977 edition *Topos Theory* P. T. Johnstone, 1977-01-01 *Handbook of Philosophical Logic* D.M. Gabbay, Franz Guenther, 2005-12-15 Intended to comprise some 18 volumes and provides an in depth coverage of major topics in philosophical logic and its applications in many fields relating to computer science language argumentation and more This work is aimed at students and researchers whose work or interests involve philosophical logic and its applications **Sketches of an Elephant** Peter T. Johnstone, 2002 [From a Geometrical Point of View](#) Jean-Pierre Marquis, 2008-11-20 *From a Geometrical Point of View* explores historical and philosophical aspects of category theory trying therewith to expose its significance in the mathematical landscape The main thesis is that Klein's Erlangen program in geometry is in fact a particular instance of a general and broad phenomenon revealed by category theory The volume starts with Eilenberg and Mac Lane's work in the early 1940's and follows the major developments of the theory from this perspective Particular attention is paid to the philosophical elements involved in this development The book ends with a presentation of categorical logic some of its results and its significance in the foundations of mathematics *From a Geometrical Point of View* aims to provide its readers with a conceptual perspective on category theory and categorical logic in order to gain insight into their role and nature in contemporary mathematics It should be of interest to mathematicians logicians philosophers of mathematics and science in general historians of contemporary mathematics physicists and computer scientists **Handbook of Categorical Algebra: Volume 3, Sheaf Theory** Francis Borceux, 1994-12-08 The *Handbook of Categorical Algebra* is intended to give in three volumes a rather detailed account of what ideally everybody working in category theory should know whatever the specific topic of research they have chosen The book is planned also to serve as a reference book for both specialists in the field and all those using category theory as a tool Volume 3 begins with the essential aspects of the theory of locales proceeding to a study in chapter 2 of the sheaves on a locale and on a topological space in their various equivalent presentations functors etale maps or W sets Next this situation is generalized to the case of sheaves on a site and the corresponding notion of Grothendieck topos is introduced Chapter 4 relates the theory of Grothendieck toposes with that of accessible categories and sketches by proving the existence of a classifying topos for all coherent theories **A Second Course in Topos Quantum Theory** Cecilia Flori, 2018-02-08 This advanced course a sequel to the first volume of this lecture series on topos quantum theory delves deeper into the theory addressing further technical aspects and recent advances These include but are not limited to the development of physical quantities and self adjoint operators insights into the quantization process the description of an alternative covariant version of topos quantum theory and last but not least the development of a new concept of spacetime The book builds on the concepts introduced in the first

volume published as Lect Notes Phys 868 which presents the main building blocks of the theory and how it could provide solutions to interpretational problems in quantum theory such as What are the main conceptual issues in quantum theory And how can these issues be solved within a new theoretical framework of quantum theory These two volumes together provide a complete basic course on topos quantum theory offering a set of mathematical tools to readers interested in tackling fundamental issues in quantum theory in general and in quantum gravity in particular From the reviews of the first volume The book is self contained and can be used as a textbook or self study manual teaching the usage of category theory and topos theory in particular in theoretical physics or in investigating the foundations of quantum theory in mathematically rigorous terms The book is a very welcome contribution Frank Antonen Mathematical Reviews December 2013

Monoidal Category Theory Noson S. Yanofsky, 2024-11-05 A comprehensive cutting edge and highly readable textbook that makes category theory and monoidal category theory accessible to students across the sciences Category theory is a powerful framework that began in mathematics but has since expanded to encompass several areas of computing and science with broad applications in many fields In this comprehensive text Noson Yanofsky makes category theory accessible to those without a background in advanced mathematics Monoidal Category Theory demonstrates the expansive uses of categories and in particular monoidal categories throughout the sciences The textbook starts from the basics of category theory and progresses to cutting edge research Each idea is defined in simple terms and then brought alive by many real world examples before progressing to theorems and uncomplicated proofs Richly guided exercises ground readers in concrete computation and application The result is a highly readable and engaging textbook that will open the world of category theory to many Makes category theory accessible to non math majors Uses easy to understand language and emphasizes diagrams over equations Incremental iterative approach eases students into advanced concepts A series of embedded mini courses cover such popular topics as quantum computing categorical logic self referential paradoxes databases and scheduling and knot theory Extensive exercises and examples demonstrate the broad range of applications of categorical structures Modular structure allows instructors to fit text to the needs of different courses Instructor resources include slides

Quantum Field Theory Bertfried Fauser, Jürgen Tolksdorf, Eberhard Zeidler, 2009-06-02 The present volume emerged from the 3rd Blaubeuren Workshop Recent Developments in Quantum Field Theory held in July 2007 at the Max Planck Institute of Mathematics in the Sciences in Leipzig Germany All of the contributions are committed to the idea of this workshop series To bring together outstanding experts working in the field of mathematics and physics to discuss in an open atmosphere the fundamental questions at the frontier of theoretical physics **New Spaces in Mathematics** Mathieu Anel, Gabriel Catren, 2021-04 In this graduate level book leading researchers explore various new notions of space in mathematics
