Tornado Alley Monster Storms Of The Great Plains:

Tornado Alley Howard B. Bluestein, 2006 Tornadoes are the most violent magnificent and utterly unpredictable storms on earth reaching estimated wind speeds of 300 mph and leaving swaths of destruction in their wake In Tornado Alley Howard Bluestein draws on two decades of experience chasing and photographing tornadoes across the Plains to present a fascinating historical account of the study of tornadoes and the great thunderstorms that spawn them A century ago tornado warnings were so unreliable that they usually went unreported Today despite cutting edge Doppler radar technology and computer simulation these storms remain remarkably difficult to study Leading scientists still conduct much of their research from the inside of a speeding truck and often contend with jammed cameras flash floods and windshields smashed by hailstones and flying debris Using over a hundred diagrams models and his own spectacular color photographs Bluestein documents the exhilaration of hair raising encounters with as many as nine tornadoes in one day as well as the crushing disappointment of failed expeditions and ruined equipment Most of all he recreates the sense of beauty mystery and power felt by the scientists who risk their lives to study violent storms For scientists amateur weather enthusiasts or anyone who s ever been intrigued or terrified by a darkening sky Tornado Alley provides not only a history of tornado research but a vivid look into the origin and effects of nature s most dramatic phenomena

Tornado God Peter J. Thuesen, 2020-04-01 One of the earliest sources of humanity s religious impulse was severe weather which ancient peoples attributed to the wrath of storm gods Enlightenment thinkers derided such beliefs as superstition and predicted they would pass away as humans became more scientifically and theologically sophisticated But in America scientific and theological hubris came face to face with the tornado nature s most violent windstorm Striking the United States more than any other nation tornadoes have consistently

defied scientists efforts to unlock their secrets Meteorologists now acknowledge that even the most powerful computers will likely never be able to predict a tornado s precise path Similarly tornadoes have repeatedly brought Americans to the outer limits of theology drawing them into the vortex of such mysteries as how to reconcile suffering with a loving God and whether there is underlying purpose or randomness in the universe In this groundbreaking history Peter Thuesen captures the harrowing drama of tornadoes as clergy theologians meteorologists and ordinary citizens struggle to make sense of these death dealing tempests He argues that in the tornado Americans experience something that is at once culturally peculiar the indigenous storm of the national imagination and religiously primal the sense of awe before an unpredictable and mysterious power He also shows that in an era of climate change the weather raises the issue of society s complicity in natural disasters In the whirlwind Americans confront the question of their own destiny how much is self determined and how much is beyond human understanding or control

The Man Who Caught the Storm Brantley Hargrove,2019-04-02 The saga of the greatest tornado chaser who ever lived a tale of obsession and daring and an extraordinary account of humanity s high stakes race to understand nature s fiercest phenomenon from Brantley Hargrove one of today s great science writers The Washington Post At the turn of the twenty first century the tornado was one of the last true mysteries of the modern world It was a monster that ravaged the American heartland a thousand times each year yet science s every effort to divine its inner workings had ended in failure Researchers all but gave up until the arrival of an outsider In a field of PhDs Tim Samaras didn t attend a day of college in his life He chased storms with brilliant tools of his own invention and pushed closer to the tornado than anyone else ever dared When he achieved what meteorologists had deemed impossible it was as if he had snatched the fire of the gods Yet even as he transformed the field Samaras kept on pushing As his ambitions grew so did the risks And when he finally met his match in a faceoff against the largest tornado ever recorded it upended everything he thought he knew Brantley Hargrove delivers a cinematically thrilling and scientifically wonky Outside tale chronicling the life of Tim Samaras in all its triumph and tragedy Hargrove takes readers inside the thrill of the chase the captivating science of tornadoes and the remarkable character of a man who walked the line between life and death in pursuit of knowledge The Man Who Caught the Storm is an adrenaline rush of a tornado chase Readers from all across the spectrum will enjoy this Library Journal starred review unforgettable exploration of obsession and the extremes of the natural world

Catastrophes! Donald R. Prothero,2011-04-01 Devastating natural disasters have profoundly shaped human history leaving us with a respect for the mighty power of the earth and a humbling view of our future Paleontologist and geologist Donald R Prothero tells the harrowing human stories behind these catastrophic events Prothero describes in gripping detail some of the most important natural disasters in history the New Madrid Missouri earthquakes of 1811 1812 that caused church bells to ring in Boston the 2004 Indian Ocean tsunami that killed more than 230 000 people the massive volcanic eruptions of Krakatau Mount Tambora Mount Vesuvius Mount St Helens and Nevado del Ruiz His clear and straightforward

explanations of the forces that caused these disasters accompany gut wrenching accounts of terrifying human experiences and a staggering loss of human life Floods that wash out whole regions earthquakes that level a single country hurricanes that destroy everything in their path all are here to remind us of how little control we have over the natural world Dramatic photographs and eyewitness accounts recall the devastation wrought by these events and the people both heroes and fools that are caught up in the earth's relentless forces Eerie fascinating and often moving these tales of geologic history and human fortitude and folly will stay with you long after you put the book down **American Exodus** Giles Slade, 2013-11-01 Some scientists predict the sea will rise 1.5 meters before 2100 but rapidly melting polar ice caps could make the real amount much higher In the coming century intensifying storms will batter our coasts and droughts and heat events will be annual threats All this will occur as population grows and declining water resources desiccate agriculture What will happen when the United States cannot provide food or fresh water for the overheated overcrowded cities where 80% of Americans currently live The good news is that this overall decline of habitability in the mid latitudes will be matched by increases in the carrying capacity of sparsely populated lands above the 49th parallel This phenomenon suggests that waves of environmental refugees will travel poleward as southern conditions worsen Our northern lands are our Noah's ark a vital refuge against the moment of mankind's greatest need In this compelling cautionary tale Slade argues that we are entering a long period of global desperation which will be characterized by human migration on an unprecedented scale *American Exodus* is a frighteningly believable survey of our immediate future but it ends on a note of hope we may yet survive the coming century of climatic change if we act now to safeguard our shelter of last resort *The Forgotten Storm* Wallace Akin, 2004-06-01 The amazing true story of the deadliest tornado in American history as told by a survivor *Severe Convective Storms and Tornadoes* Howard B. Bluestein, 2013-06-03 This book is a focused comprehensive reference on recent research on severe convective storms and tornadoes It will contain many illustrations of severe storm phenomena from mobile Doppler radars operational Doppler radars photographs and numerical simulations **Encyclopedia of Environmental Change** John A. Matthews, 2013-12-13 Accessibly written by a team of international authors the Encyclopedia of Environmental Change provides a gateway to the complex facts concepts techniques methodology and philosophy of environmental change This three volume set illustrates and examines topics within this dynamic and rapidly changing interdisciplinary field The encyclopedia includes all of the following aspects of environmental change Diverse evidence of environmental change including climate change and changes on land and in the oceans Underlying natural and anthropogenic causes and mechanisms Wide ranging local regional and global impacts from the polar regions to the tropics Responses of geoecosystems and human environmental systems in the face of past present and future environmental change Approaches methodologies and techniques used for reconstructing dating monitoring modelling projecting and predicting change Social economic and political dimensions of environmental issues environmental conservation and management and environmental

policy Over 4 000 entries explore the following key themes and more Conservation Demographic change Environmental management Environmental policy Environmental security Food security Glaciation Green Revolution Human impact on environment Industrialization Landuse change Military impacts on environment Mining and mining impacts Nuclear energy Pollution Renewable resources Solar energy Sustainability Tourism Trade Water resources Water security Wildlife conservation The comprehensive coverage of terminology includes layers of entries ranging from one line definitions to short essays making this an invaluable companion for any student of physical geography environmental geography or environmental sciences *Storms, Violent Winds, and Earth's Atmosphere* John P. Rafferty Associate Editor, Earth Sciences, 2010-08-15 Presents an introduction to storms discussing the role of the Earth s atmosphere in the formation of storms and describing the different types of storms including windstorms thunderstorms tornadoes and tropical cyclones
