## **Understanding Led Illumination 1st Edition By Khan M Nisa 2013 Hardcover:**

Understanding Led Illumination M Nisa Khan, 2020-10-02 Understanding LED Illumination elucidates the science of lighting for light emitting diodes. It presents concepts, theory, simulations, and new design techniques that shine the spotlight on illumination energy efficiency and reducing electrical power consumption. The text provides an introduction to the fundamentals of LED lamp design and highlights the principles of large space and 3D object illumination for developing competitive LED lamps. The first part of the book discusses lamp output metrics and characterization methods, while the second part of the book explores certain retail and prototype lamp comparisons with theory, simulations, and experiments. It details the light propagation and distribution characteristics of LED light sources for general illumination applications and presents design and simulation requirements for LED lamps suited for real world applications. It also addresses light generation efficiency, theoretical limits, efficiency limiting factors, and LED lamp design elements. Emphasizes the lighting aspects for LED lamps, quality, and improvement. Describes the basics of junction diode and the intricacies of compound semiconductor optoelectronic properties, including the thermal, electrical, optical, and mechanical aspects. Explains the challenges of LED lighting in scientific and mathematical terms. Includes case studies from Osram, Optosemiconductors, Sylvania, and Phillips, GE, and others. The book characterizes several LED replacement lamps for household and commercial lighting and discusses a novel design for improving tubular LED replacements. It takes the mysteries out of solid state lighting for lighting designers and helps LED scientists and engineers effectively design their products to provide high quality illumination. **LED Lighting** T. Q. Khan, P. Bodrogi, Q. T. Vinh, H. Winkler, 2015-02-09 Promoting the design

application and evaluation of visually and electrically effective LED light sources and luminaires for general indoor lighting as well as outdoor and vehicle lighting. This book combines the knowledge of LED lighting technology with human perceptual aspects for lighting scientists and engineers. After an introduction to the human visual system and current radiometry, photometry, and color science, the basics of LED chip and phosphor technology are described, followed by specific issues of LED radiometry and the optical, thermal, and electric modeling of LEDs. This is supplemented by the relevant practical issues of pulsed LEDs, remote phosphor LEDs, and the aging of LED light sources. Relevant human visual aspects closely related to LED technology are described in detail for the photopic and the mesopic range of vision, including color rendering, binning, whiteness, Circadian issues, as well as flicker perception, brightness, visual performance, conspicuity, and disability glare. The topic of LED luminaires is discussed in a separate chapter, including retrofit LED lamps, LED based road and street luminaires, and LED luminaires for museum and school lighting. Specific sections are devoted to the modularity of LED luminaires, their aging, and the planning and evaluation methods of new LED installations. The whole is rounded off by a summary and a look towards future developments. LED Lighting Explained Jonathan Weinert, Philips, 2010-04-01
