Complementary Medicine And Health Psychology van Wersch, Anna, Forshaw, Mark, Cartwright, Tina, 2009-10-01 The authors explore the relationship between health psychology and CAM and look at how an understanding of one can be used to inform the other **Perspectives on Complementary and Alternative Medicine: A Reader** Geraldine Lee Treweek, Tom Heller, Julie Stone, Hilary MacQueen, Jeanne Katz, 2019-07-23 Complementary and alternative medicine CAM is an emerging and increasingly popular group of treatments therapies and philosophies of health and wellbeing It is a fascinating and fast changing area of social life which also poses an interesting challenge to current healthcare delivery and policy making This reader presents a lively and engaging collection of classic controversial and new readings on CAM and covers issues including changes in the way CAM is developing and being delivered holism and what this concept means to CAM practice changes in consumption and the health consumer that have lead to increased interest in CAM the safety and effectiveness of CAM treatments how integration is being achieved in contemporary society The text provides insight into many of the current and complex issues surrounding CAM and will appeal to everyone who is concerned with or who has an interest in complementary and alternative healthcare The book will be essential reading for students of CAM health studies nursing medicine and allied health subjects as well as medical sociology and modern health policy *Snake Oil Science* R. Barker Bausell PhD, 2009-07-31 Every year millions of people flock to complementary and alternative therapists offering a vast array of treatments ranging from acupuncture to biofeedback to urine injections Millions more purchase over the counter alternative medications such as glucosamine herbs and homeopathic remedies While consumer motivations for turning to complementary and alternative medicine CAM vary there is one common element among them all a belief in their effectiveness This belief appears to be prevalent among all elements of society from scientists and physicians to celebrities

such as Prince Charles and Oprah Winfrey to clerical workers and senior citizens Do these therapies actually work And if they work how do they work This book is about the science of complementary and alternative medicine about how that science is conducted how it is evaluated and how it is synthesized to arrive at a bottom line conclusion about whether CAM therapies work It is also about the phenomenon of the placebo effect and the extent to which it is at play in a given CAM therapy s efficacy Are CAM therapies in fact nothing more than creatively packaged placebos In exploring this question Barker Bausell provides an authoritative and engaging look at the nature of scientific evidence and at the logical psychological and physiological impediments that can confound such evidence in the world of CAM research Ultimately the book is not so much opposed to CAM as to the shoddy science upon which CAM claims are based and in fact it closes with a chapter about how one might maximize the placebo effect that Bausell asserts is the main ingredient of most CAM therapies For general readers students and professionals e g clinicians who are routinely asked by their patients for CAM recommendations the book is a learned witty examination not just of the scientific process as it is applied to CAM but also of the wonders of the human mind body system

Spiritual Healing Fraser Watts, 2011-01-06 There has recently been much interest in the relationship between science and religion and how they combine to give us a binocular perspective on things One important phenomenon which has been neglected in recent work is the concept of spiritual healing This edited collection explores a variety of approaches to spiritual healing from different religious points of view identifying both what it is and how it works The authors also explore the biological and psychological processes open to scientific enquiry through which healing may be mediated As such this book indicates the central proposition that religious and scientific perspectives answer different questions about healing and there is not necessarily any conflict between them
