It is an integrated and therefore a relatively *long-term* virus, even when that integrated. It *dominates* (even when its impact is less than that of the 2nd virus) (Figure 2.13).

Domestic insects are also called **house insects** because they get continuously introduced to houses and homes. In some cases, they become established in houses and help in the food chain, as is the case for ground bugs that feed the earth. Despite the name, house flies do not feed the host and eventually die outside. But all house insects contribute to the food chain. Some are the primary source of animal and birds and are hunted because the insects are eaten. But in the agriculture sector, animals like cows, sheep, goats, turkeys, etc. are the main source of meat.
