

NONLOCAL QUASILINEAR PARABOLIC EQUATIONS

HERBERT AMANN

ABSTRACT. We give a survey of the most common approaches to quasilinear parabolic evolution equations, discuss their advantages and drawbacks, and present an entirely new approach based on maximal L_p regularity. Our general results apply, above all, to parabolic initial boundary value problems being nonlocal in time. This is illustrated by indicating their relevance for quasilinear parabolic equations with memory and, in particular, for time regularized versions of the Perona-Malik equation of image processing.

Dedicated to S.M. Nikols'kii on the occasion of his 100th birthday

Introduction

In this paper we discuss a new approach to the abstract quasilinear parabolic equation

$$\hat{u} + A(u)u = F(u) \quad \text{on } (0, T), \quad u(0) = u^0, \quad (0.1)$$

where T is a fixed positive number. Formulation (0.1) encompasses a great variety of concrete problems, most prominently parabolic initial boundary value problems of the form

$$\left. \begin{aligned} \partial_t u - \nabla \cdot (\alpha(u) \nabla u) &= f(u) && \text{on } \Omega \times (0, T), \\ \chi \partial^x \cdot \alpha(u) \nabla u + (1 - \chi)u &= \chi g(u) && \text{on } \Gamma \times (0, T), \\ u(\cdot, 0) &= u^0 && \text{on } \Omega, \end{aligned} \right\} \quad (0.2)$$

where $\chi \in \{0, 1\}$, Ω is a bounded smooth domain with boundary Γ , and ∂^x is the exterior normal on Γ . In contrast to standard classical settings we are particularly interested in situations where α , f , and g are nonlocal functions of u . Of course, the matrix $\alpha(u)$ has to be uniformly positive definite on $\bar{\Omega}$ for every admissible choice of u . It should also be mentioned that (0.2) encompasses systems as well if obvious interpretations are employed.

In the following section we review the standard known approaches to (0.1) and (0.2). Then, in the next section, we briefly discuss concepts of maximal regularity. In Section 3 we present our main new abstract theorem, and in the last section we indicate some of its applications illustrating the strength and novelty of our approach.

Undetermined Coefficient Problems For Quasi Linear Parabolic Equations:

Undetermined Coefficient Problems for Quasi-Linear Parabolic Equations, 1992 Our research efforts during the grant period were concerned with undetermined coefficient problems in partial differential equations focusing on three distinct areas problems where the unknown coefficients depend only on the dependent variables problems giving rise to first order equations where the boundary conditions and the coefficients in the equations have a nonlocal dependence on the variables and inverse spectral problems in which unknown coefficients have to be determined from eigenvalue data These problems originate from situations where one wants to recover unknown material properties or to determine the nature of an unknown physical law A number of theoretical results existence as well as uniqueness as well as computational algorithms were derived for model elliptic parabolic and hyperbolic equations During the period of the grant two major conferences were organized by the principal investigators 1 Ph D thesis was completed 17 publications appeared and an additional 5 manuscripts were submitted *Inverse Problems in Diffusion Processes* Heinz W.
