Research on Design for Prevention of Ditch Erosion on Virginia Highways, 1999 Roadside ditch erosion has been problematic on Virginia highways VDOT through the Virginia Transportation Research Council requested that roadside ditch erosion be investigated by means of a research project Virginia Tech was selected to conduct this study In support of this research design guidance documents were surveyed to learn the current established policy and procedures for soil data collection and reporting and the design practice for hydrologic and hydraulic analyses of roadside ditches Site visits to each of Virginia's nine construction districts were made to interview district personnel about their personal experience with roadside ditch design performance and erosion failures Current ditch design practices in nine other states were investigated through the collection and survey of state drainage manuals and phone interviews with DOT personnel Finally an extensive review of current literature was performed with the intent of investigating current research on ditch erosion and erosion control Results of the research indicate that three major factors are contributing to the occurrence of erosion in roadside ditches They include 1 insufficient soil information collected on road projects and reported in unusable formats for the hydraulic designers 2 overuse of default values and criteria in hydraulic design and 3 geographical and management issues not currently encompassed by current VDOT ditch design policies and procedures Recommendations directed at these factors are provided along with tables presenting updated correlations between site specific conditions and hydraulic parameters for design

Access Management Donald L. Bowman, 1998 This report analyzes comprehensive highway access management programs and looks at the potential benefits and legal limits to Virginia adopting such a program to replace Virginia's rather limited site specific permitting process In 1942 Virginia passed legislation defining the right of private homeowners and commercial establishments to make connections to state highways Va Code 33-1-197 private entrances and 33-1-198 commercial entrances The statutes established a permit process for commercial and private entrances to state highways administered by VDOT in accordance with the Minimum Standards of Entrances to State Highways However the Minimum Standards do not establish a comprehensive access management plan for Virginia's highway systems and have been criticized for being too permissive In 1980 Colorado became the first state to enact a comprehensive highway access management code with strict safety and traffic criteria for private accesses to public highways Since that time Florida and New Jersey have also adopted comprehensive programs However Virginia's access management process continues to be a case by case permit review process This report considers the relative benefits of access management analyzes the legal obstacles in Virginia for a comprehensive program and discusses options Virginia might consider The report also includes an analysis of Virginia's legal and regulatory framework within which an access management program would operate and two alternative models for access management regulation to assist policy makers
