Abbasi, Yifan Chen, 2014-02-18 With the advances in small and low cost radio transceivers and RF front ends development the possibility of applying ubiquitous and non invasive sensors integrated into user s daily clothing and living activities seems more feasible The ability to share data increases the usefulness of personal information devices providing features not possible with independent isolated devices Current wireless sensor solutions are limited in that they do not provide the means to overcome obstacles and shadowing of propagating radio waves Thus for reliable communications an increase in power consumption is required reducing battery life This book addresses the limitations outlined above by designing efficient and compact antenna systems These systems will be cooperative and also aware of the surrounding environment and neighboring units providing efficient and low power wireless connectivity for personal area network PAN and body area network BAN applications Analysis of wearable antenna design and performance Addresses the Influence of body worn antennas on radio channels and radio device performance from a power and error rate perspective Cooperative networking principles applied to body area networks showing the pros and cons of such concepts Real life case scenarios using ECG sample signals for potential application to healthcare monitoring *Healthcare Sensor Networks* Daniel Tze Huei Lai, Marimuthu Palaniswami, Rezaul Begg, 2016-04-19 Healthcare sensor networks HSNs now offer the possibility to continuously monitor human activity and physiological signals in a mobile environment Such sensor networks may be able to reduce the strain on the present healthcare workforce by providing new autonomous monitoring services ranging from simple user reminder systems to more advanced mon **Wireless Sensor Network for Health Monitoring** Jin Soo Choi, 2012 Wireless Sensor Network WSN is becoming a significant enabling technology for a wide variety of applications Recent advances in WSN have facilitated the realization of pervasive health monitoring for both homecare and hospital environments Current technological advances in sensors power efficient integrated circuits and wireless communication have allowed the development of miniature lightweight low cost and smart physiological sensor nodes These nodes are capable of sensing processing and communicating one or more vital signs Furthermore they can be used in wireless personal area networks WPANs or wireless body sensor networks WBSNs for health monitoring Many studies were performed and or are under way in order to develop

flexible reliable secure real time and power efficient WBSNs suitable for healthcare applications To efficiently control and monitor a patient s status as well as to reduce the cost of power and maintenance IEEE 802 15 4 ZigBee a communication standard for low power wireless communication is developed as a new efficient technology in health monitoring systems The main contribution of this dissertation is to provide a modeling analysis and design framework for WSN health monitoring systems This dissertation describes the applications of wireless sensor networks in the healthcare area and discusses the related issues and challenges The main goal of this study is to evaluate the acceptance of the current wireless standard for enabling WSNs for healthcare monitoring in real environment Its focus is on IEEE 802 15 4 ZigBee protocols combined with hardware and software platforms Especially it focuses on Carrier Sense Multiple Access with Collision Avoidance mechanism CSMA CA algorithms for reliable communication in multiple accessing networks The performance analysis metrics are established through measured data and mathematical analysis This dissertation evaluates the network performance of the IEEE 802 15 4 unslotted CSMA CA mechanism for different parameter settings through analytical modeling and simulation For this protocol a Markov chain model is used to derive the analytical expression of normalized packet transmission reliability channel access delay and energy consumption This model is used to describe the stochastic behavior of random access and deterministic behavior of IEEE 802 15 4 CSMA CA By using it the different aspects of health monitoring can be analyzed The sound transmission of heart beat with other smaller data packet transmission is studied The obtained theoretical analysis and simulation results can be used to estimate and design the high performance health monitoring systems

Sensor Technologies Michael J. McGrath, Clíodhna Ni Scanail, Dawn Nafus, 2014-01-23 Sensor Technologies Healthcare Wellness and Environmental Applications explores the key aspects of sensor technologies covering wired wireless and discrete sensors for the specific application domains of healthcare wellness and environmental sensing It discusses the social regulatory and design considerations specific to these domains The book provides an application based approach using real world examples to illustrate the application of sensor technologies in a practical and experiential manner The book guides the reader from the formulation of the research question through the design and validation process to the deployment and management phase of sensor applications The processes and examples used in the book are primarily based on research carried out by Intel or joint academic research programs Sensor Technologies Healthcare Wellness and Environmental Applications provides an extensive overview of sensing technologies and their applications in healthcare wellness and environmental monitoring From sensor hardware to system applications and case studies this book gives readers an in depth understanding of the technologies and how they can be applied I would highly recommend it to students or researchers who are interested in wireless sensing technologies and the associated applications Dr Benny Lo Lecturer The Hamlyn Centre Imperial College of London This timely addition to the literature on sensors covers the broad complexity of sensing sensor types and the vast range of existing and emerging applications in a very clearly written and accessible manner It is

particularly good at capturing the exciting possibilities that will occur as sensor networks merge with cloud based big data analytics to provide a host of new applications that will impact directly on the individual in ways we cannot fully predict at present It really brings this home through the use of carefully chosen case studies that bring the overwhelming concept of big data down to the personal level of individual life and health Dermot Diamond Director National Centre for Sensor Research Principal Investigator CLARITY Centre for Sensor Web Technologies Dublin City University Sensor Technologies Healthcare Wellness and Environmental Applications takes the reader on an end to end journey of sensor technologies covering the fundamentals from an engineering perspective introducing how the data gleaned can be both processed and visualized in addition to offering exemplar case studies in a number of application domains It is a must read for those studying any undergraduate course that involves sensor technologies It also provides a thorough foundation for those involved in the research and development of applied sensor systems I highly recommend it to any engineer who wishes to broaden their knowledge in this area Chris Nugent Professor of Biomedical Engineering University of Ulster
