

Answer Key- LO 2.3

- Which of the following best explains why energy cannot cycle through an ecosystem?

A. The law of conservation of energy
B. The second law of thermodynamics
C. The competitive exclusion principle
D. The green world hypothesis
E. The principle of bio magnification

- Learning Log/ FRQ-style Question: An energy pyramid for a marine ecosystem is shown to the right. **Label each trophic level of the pyramid and provide an example of a marine organism found at each level of this pyramid. Explain why the energy available at the top layer of the pyramid is a small percentage of the energy present at the bottom of the pyramid.**

- An example of a marine organism in each trophic level is algae (producer), plankton (consumer), small fish (carnivore), shark (consumer). Energy transferred due to heat, work, and metabolic activities leaves only 10% of energy to be passed onto the next trophic level. This is called the 10% rule.
