Virus Of The Mind The New Science Of The Meme:

Virus of the Mind Richard Brodie, We are surrounded by information in the 21st Century we are bombarded by advertising attitudes celebrities news wars fashion the latest fads the sheer amount of information we have access to appears untameable unworkable and too much to gain sense from unless we pick and choose very carefully However our choices are very often made for us as the result of advertising media companies the government and popular culture The results of these choices are called memes and their impact is shaping not just society but us individually and on a core level beyond psychology personal free will and even genetics

Virus of the Mind Richard Brodie, 2011-02-15 *Virus of the Mind* is the first popular book devoted to the science of memetics a controversial new field that transcends psychology biology anthropology and cognitive science Memetics is the science of memes the invisible but very real DNA of human society In *Virus of the Mind* Richard Brodie carefully builds on the work of scientists Richard Dawkins Douglas Hofstadter Daniel Dennett and others who have become fascinated with memes and their potential impact on our lives But Richard goes beyond science and dives into the meat of the issue is the emergence of this new science going to have an impact on our lives like the emergence of atomic physics did in the Cold War He would say the impact will be at least as great While atomic bombs affect everybody's life viruses of the mind touch lives in a more personal and more pernicious way Mind viruses have already infected governments educational systems and inner cities leading to some of the most pervasive and troublesome problems of society today youth gangs the welfare cycle the deterioration of the public schools and ever growing government bureaucracy Viruses of the mind are not a future worry they are here with us now and are evolving to become better and better at their job of infecting us The recent explosion of mass media and the information superhighway has made the earth a prime breeding ground for viruses of the mind Will there be a mental plague Will only some of us survive with our free will intact Richard Brodie weaves together science ethics and current events as he raises these and other very disturbing questions about memes

Science Fiction, 2007 *Mesmerization* Gee Thomson, 2008 In the modern Western world hundreds if not thousands of contagious ideas spread by word of mouth or through the media spells or memes make up contemporary culture and affect just about every aspect of our daily life Some of the most powerful of these spells form the core of Mesmerization In this highly visual publication the many facets of each spell are dissected and analysed within a unique graphic formula that exposes and encapsulates its meaning and purpose The most successful of such constructs are the creation of the media the image makers advertising executives newspaper editors creatives designers photographers and film producers who make up the ranks of the creative elite Their dreams of affluence comfort and wellbeing are being emulated the world over More than we know they determine what we believe how we behave and think and control our decisions as to what gets made what gets seen what gets heard But there are cracks in this wonderland Psychological disorders drug dependency obesity gun crime and social addictions are on the rise Worldwide the gaping disparity between rich and poor nations religious unrest disease and famine resource scarcity and fears over climate change head the agenda The influence and aspirations of our lifestyles are central to these issues How can we make headway in confronting our wider realities when we have an image machine that is totally at loggerheads with the need for restraint By revealing the collective power of these insidious cultural influences Mesmerization is a challenge to the creative industry to those who control the motivational drivers underpinning the global psyche In their hands rests the ability to change and transform future behaviour This publication provides the catalyst

and technology have brought remarkable advances and improvements we are healthier wealthier and more comfortable than ever before But our gratitude for the benefits of progress increasingly mixes with concern about the meaning and consequences of our newfound powers If we can dream about a new age of genetic medicine we can also shudder at a new age of weapons of mass destruction As we welcome longer lives we wonder if we will still value human life as we should In the Shadow of Progress Being Human in the Age of Technology is a deep and lively reflection on the moral challenges of the technological age Eric Cohen a leading voice in America s bioethics debates offers a tour of the complex dilemmas at the intersection of science and morality moving seamlessly from contemporary subjects like stem cells and evolution to classic texts like the Hebrew Bible and Francis Bacon s New Atlantis Why are the wealthiest people in human history the least likely to want children What kind of civilization will we become if we seek cures for the sick by destroying human embryos What is lost when we relieve human sadness by altering the chemical balance of the brain or enhance human performance by altering the biological workings of the body In this age of scientific wonders have we forgotten what sets human beings apart from everything else in the natural world Can the fruits of modern science ever satisfy our deepest longings for love for virtue and for transcendence In the end Cohen argues there are no easy answers Our challenge is to live simultaneously with gratitude and fear pride and shame sobriety and hope in this new age of technology **The Story Factor** Annette

Henry,2002-03-30 The media star has become a powerful almost unparalleled cultural sign even as the star system has undergone radical transformation since the era of the Hollywood studio system Today s film industry continues to market and promote its products through actors in ways that seek to capture the often elusive quality that a star can embody Using contemporary stars such as Robert De Niro Keanu Reeves Arnold Schwarzenegger and Dennis Hopper this anthology of essays applies a variety of theoretical tools in its attempt to understand how we interpret stars and how we can begin to understand their cultural significance Likewise the study explores how the star system has become an increasingly complex phenomenon within society at large extending its impact beyond the cinema into music sports and fashion Many of the essays collected here consider this shift and examine how personae including the director Sam Peckinpah the royalty Princess Diana and even the digital star Lara Croft have captured the cultural imagination and have come to attain qualities as star like as those of the silver screen *Loyola of Los Angeles Law Review* ,2005
