The COVID-19 Intelligence Failure Erik J. Dahl, 2023 Erik J Dahl examines the role of intelligence in providing advance warning to policymakers about the threat of pandemics Dahl also considers the question of whether or not the Covid 19 pandemic was an intelligence failure He begins the book by describing how both US national security intelligence agencies and public health surveillance organizations provide warning He describes the similarities and differences between them and how these communities do and do not work together Dahl goes on to argue that this pandemic was indeed a global intelligence failure one in which the established worldwide system of collection and analysis was unsuccessful in giving sufficient warning to prevent the global spread of the disease He explains why policymakers needed a different type of intelligence than what was available and he makes recommendations for how the national security intelligence and public health communities can work more effectively together in the future This pandemic could not have been completely avoided even with more actionable intelligence due to the nature of the disease and the Trump administration s aversion to accepting advice from the intelligence and scientific communities However unearthing intelligence in both secret and open sources to provide early warning of an outbreak is of paramount importance to giving policymakers the opportunity to avert or mitigate the effects of future pandemics
