Virtual Astronomy Spectrum Lab:

The Solar System Michael A. Seeds, 2007 Helps students use astronomy to understand science and use science to understand what we are Fascinating and engaging this text illustrates the scientific method and guides students to answer these fundamental questions What are we And how do we know [Practical Projects for Astronomers](#) Neil Wyatt, 2021-04-26 Astronomy and astrophotography are fascinating hobbies It is possible to create and enhance astronomical equipment and accessories using techniques and materials accessible to the hobbyist metalworker or model engineer Written by an amateur astronomer and experienced hobby engineer this wide ranging book presents tried and tested ideas from the simplest of gadgets to advanced projects Includes how to design and make refracting telescopes and how to make a Newtonian reflector around a mirror set Instructions are given on making different types of eyepiece using stock lenses and making gadgets for collimation polar alignment focusing sky quality metering and much more Information is given on improving the performance of mounts and tripods and how to cool cameras and improve their performance for long exposure photography Details are given on making an equatorial platform for Dobsonian telescopes and using Arduinos and other electronic modules as part of your projects **Astronomy** Michael A. Seeds, 2005 **Astrochemistry** Olivia Harper Wilkins, Geoffrey A.

Blake, 2021-07-21 The answers to some of the most fundamental questions in science lie between the stars in molecular clouds that serve as celestial laboratories Disentangling the chemistries in extraterrestrial environments can provide clues about how planets form and shed light on problems in terrestrial chemistry that are difficult to investigate in the lab and even the origins of life Astrochemistry takes you on a tour of the molecular universe through time and space starting with the emergence of matter about 13.8 billion years ago From there the tour visits the interstellar medium with an emphasis on molecular clouds where stars are born It then goes through different evolutionary stages of stars and planets and the chemistry that emerges alongside them before ending in our own solar system where you will learn about chemical delivery by objects such as comets and meteorites **Spectral Line Shapes in Astrophysics and Related Topics** Milan S.

Dimitrijević, Luka Č. Popović, 2020-02-18 Spectral lines widths and shapes are powerful tools for emitting absorbing gas diagnostics in different astrophysical objects from the solar system to the most distant objects in the universe quasars On the other hand experimental and theoretical investigations of laboratory plasma have been applied in spectroscopic astrophysical research especially in research on atomic data needed for line shape calculations Data on spectral lines and their profiles are also important for diagnostics analysis and the modelling of fusion plasma laser produced plasma laser design and development and various plasmas in industry and technology like light sources based on plasmas or the welding and piercing of metals by laser produced plasma The papers from this book can be divided into four groups 1 stark broadening data for astrophysical and laboratory plasma investigations 2 applications of spectral lines for astrophysical and laboratory plasma research 3 spectral line phenomena in extragalactic objects and 4 laboratory astrophysics results for spectra investigation

The reviews and research papers representing new research on the topics presented in this book are of interest for specialists and PhD students We hope that the present book will be useful and interesting for scientists interested in the investigation of spectral line shapes and will contribute to the education of young researchers and PhD students
