

STUDY GUIDE FOR BACTERIA AND VIRUSES

Answers too, important words underlined.

1. Identify structures A – F.

- A. Cell Wall, made of Peptidoglycan in Eubacteria, Archaeobacteria uses a different substance.
- B. Cell Membrane, note that all cells have a cell membrane
- C. Plasmid, small circle or loop of DNA. This is the genetic material that bacteria exchange in Conjugation (a form of sexual reproduction where bacteria exchange plasmids but DO NOT go thru meiosis.)
- D. Pili, these help the bacteria stick to surfaces.
- E. DNA
- F. Flagellum (plural – flagella)

2. Identify the structures that are different between eubacteria and archaeobacteria.

The cell wall is made of different material (peptidoglycan) some of the lipids are different. Other chemical and genetic differences lead us to believe that archaeobacteria are the true ancestors of Eukaryote cells and that organelles found in Eukaryote cells like the mitochondria and chloroplasts are the remnants of symbiotic bacteria that infected cells soon after life began.

3. Name and describe the 3 shapes of bacteria.

- Bacillus – rod shaped.
- Coccus – sphere shaped
- Spirilla - spiral

4. Name several ways to kill bacteria.

Disrupt the chemical processes of the bacteria, destroy the cell walls, or destroy the cell membranes. Antibiotics do these when you are sick. See number 10. Often times antibiotics kill the good as well as the bad viruses and give you diarrhea.

Summary & Study Guide - Microbia Lee Tang, 2019-06-01. Microbes connect all living and nonliving things on Earth. This book is a summary of *Microbia: A Journey into the Unseen World Around You* by Eugenia Bone. New discoveries about how microbes affect our lives occur every day, but it seems to require an advanced degree in biology to understand how they impact us. Journalist Eugenia Bone returned to college in her fifties to help make sense of these creatures. What she learned is that microbes connect to all living things. They also connect nonliving things to living things. They maintain the balance of chemicals on the planet and convert carbon dioxide into food that travels up the food chain. Inside our cells are the remnants of ancient bacteria called mitochondria that convert the oxygen we breathe into energy. In *Microbia*, Bone chronicles what she learned in her year of studying biology. It begins with the origin of life and how microbes affect the atmosphere and soil, connecting nonliving things to living things. She explores how microbes influence the evolution of all living things and why plants and animals evolve with their microbes. Read this primer to understand the entwined worlds of microbes and the rest of life on Earth. This guide includes Book Summary, helps you understand the key concepts, Online Videos cover the concepts in more depth, Value added from this guide, Save time, Understand key concepts, Expand your knowledge.
