Tropical Deforestation And Species Extinction:

Tropical Deforestation and Species Extinction T.C. Whitmore, J.A. Sayer, 1992-04-30 Most animal and plant species inhabit tropical forests Hence the interest in the effects of tropical forest clearance on biological diversity The book provides a conservationist's perception of how fast tropical forests are being lost and what the consequences are for biological diversity

Tropical Deforestation and Species Extinction Timothy Charles Whitmore, 1992 *Tropical Deforestation and Species Extinction*, 1992 *Biodiversity in Managed Landscapes* Robert C. Szaro, David W. Johnston, 1996 The conservation of biodiversity has profound implications for managing natural resources with the need for scientific information as a foundation for management decisions increasing dramatically The intent of this book is to look beyond the theory of biodiversity to the principles practices and policies needed for its conservation Its objectives are to provide the scientific basis for understanding biodiversity document case examples of theory and concepts applied at differing scales and examine policies that affect its conservation

Protection of Global Biodiversity Lakshman D. Guruswamy, Jeffrey A. McNeely, 1998 The rate of extinction of biological species is greater today than at any time in the last 65 million years Some predict that if this rate continues two thirds of all living species will disappear during the next century Because reaching consensus on specific courses of action involves complex issues any adequate response to this impending crisis must include coverage of many areas of inquiry and understanding Protection of Global Biodiversity features essays by distinguished international experts who communicate with each other across disciplinary boundaries to address the challenge of formulating policies to protect biodiversity Although the global community has recently adopted a Convention of Biological Diversity the agreement sets forth only abstract goals Contributors to this volume advance the Convention's initial steps by providing workable solutions that can be implemented regionally nationally and locally The contributors including natural social and political scientists economists lawyers and environmentalists and decisionmakers in business agriculture and government have united to create a common discourse and to evaluate and propose strategies for halting this alarming loss of biodiversity In recognizing the diverse aspects of this task scientific economic institutional moral and legal this book presents a new picture of emerging action Contributors S James Anaya Gregory Benford Graciela Chichilnisky S Todd Crider Yvonne Cripps Robert T Fraley Anil K Gupta Lakshman D Guruswamy G M Heal Brent Hendricks Robert B Horsch Laura L Jackson Annie Lovejoy Ariel E Lugo Jeffrey A McNeely Brian G Norton Elinor Ostrom Peter H Raven John W Reid Walter V Reid Mark Sagoff Roger A Sedgo R David Simpson Ana Sittenfeld Christopher D Stone Gary H Toenniessen

Drugs of Natural Origin Anthony Artuso, 1997 *Drugs of Natural Origin* gives you a detailed model of the value of wild biological resources for pharmaceutical research and development Author Anthony Artuso presents several decision models and analytical techniques that you can use to assess the economics of biochemical prospecting efforts whether you're part of a private corporation nonprofit research institute developing country government or international organization

Conservation Biogeography Richard J. Ladle, Robert J. Whittaker, 2011-01-11 CONSERVATION BIOGEOGRAPHY The Earth's ecosystems are in the midst of an unprecedented period of change as a result of human action. Many habitats have been completely destroyed or divided into tiny fragments; others have been transformed through the introduction of new species or the extinction of native plants and animals while anthropogenic climate change now threatens to completely redraw the geographic map of life on this planet. The urgent need to understand and prescribe solutions to this complicated and interlinked set of pressing conservation issues has led to the transformation of the venerable academic discipline of biogeography, the study of the geographic distribution of animals and plants. The newly emerged sub-discipline of conservation biogeography uses the conceptual tools and methods of biogeography to address real-world conservation problems and to provide predictions about the fate of key species and ecosystems over the next century. This book provides the first comprehensive review of the field in a series of closely interlinked chapters addressing the central issues within this exciting and important subject.

Nature and Human Society Peter H. Raven, 2000-03-07 From earliest times human beings have noticed patterns in nature: night and day, tides and lunar cycles, the changing seasons, plant succession and animal migration. While recognizing patterns conferred great survival advantage, we are now in danger from our own success in multiplying our numbers and altering those patterns for our own purposes. It is imperative that we engage again with the patterns of nature, but this time with awareness of our impact as a species. How will burgeoning human populations affect the health of ecosystems? Is loss of species simply a regrettable byproduct of human expansion? Or is the planet passing into a new epoch in just a few human generations? *Nature and Human Society* presents a wide-ranging exploration of these and other fundamental questions about our relationship with the environment. This book features findings, insights, and informed speculations from key figures in the field: E. O. Wilson, Thomas Lovejoy, Peter H. Raven, Gretchen Daily, David Suzuki, Norman Myers, Paul Erlich, Michael Bean, and many others. This volume explores the accelerated extinction of species and what we stand to lose: medicines, energy sources, crop pollination, and pest control; the ability of water and soil to renew itself through biological processes; aesthetic and recreational benefits; and how these losses may be felt locally and acutely. What are the specific threats to biodiversity? The book explores human population growth, the homogenization of biota as a result of tourism and trade, and other factors including the social influences of law, religious belief, and public education. Do we have the tools to protect biodiversity? The book looks at molecular genetics, satellite data, tools borrowed from medicine, and other scientific techniques to firm up our grasp of important processes in biology and earth science, including the new science of conservation biology. *Nature and Human Society* helps us renew our understanding and appreciation for natural patterns with surprising details about microorganisms, nematodes, and other overlooked forms of life, their numbers, pervasiveness, and importance to the health of the soil, water, and air, and to a host of human endeavors. This book will be of value to anyone who believes that the world's gross natural product is as important as the world's gross national product. *True State of the*
