Tropical Estuarine Fishes Ecology Exploration And Conservation:

Tropical Estuarine Fishes Stephen J. M. Blaber, 2008-04-30 Research on the large array of tropical estuarine fishes has increased markedly in recent years and hence scientific knowledge about most aspects of these important fishes biology and ecology is now catching up with that of their temperate equivalents This landmark book draws together a vast wealth of information on tropical estuarine fishes and provides a vital reference point for all aspects of their study The book s comprehensive contents include thorough coverage of the types and distribution of these fishes their diversity and the environmental conditions and communities in which they live Full details of their biology and ecology are an integral part of this book as are details of these fishes dependence on estuaries man s interaction with the estuarine fish community and the conservation of estuarine species and the often threatened habitats upon which they depend The author Stephen Blaber has a vast wealth of experience in the subject areas covered by this book and has produced a stimulating and extremely valuable volume that will be of huge importance for all those concerned with these fishes He is based at CSIRO Marine Research Cleveland Queensland Australia Readership should include fish biologists fisheries scientists aquatic scientists including those concerned with brackish marine and freshwater environments ecologists environmental scientists and population biologists Students studying for qualifications in fish biology and fisheries particularly where there is a tropical element to their course will find this book of great value as a reference Copies of the book should be available on the shelves of all libraries in research establishments and universities where biological sciences fish biology fisheries science or aquatic sciences are studied and taught

The Small-Scale Fisheries Guidelines Svein Jentoft, Ratana Chuenpagdee, María José Barragán-Paladines, Nicole Franz, 2017-06-10 In June 2014 FAO member states endorsed the Voluntary Guidelines for Securing Sustainable Small Scale Fisheries SSF Guidelines These Guidelines are one of the most significant landmarks for small scale fisheries around the world They are comprehensive in terms of topics covered and progressive with their foundations based on human rights and other key principles It can be anticipated that implementing the SSF Guidelines whether at local national or regional levels will be challenging This book contains in depth case studies where authors discuss the extent to which the Guidelines can help improve the realities of small scale fishing men and women globally and make their livelihoods and communities more secure This will require policy intervention and innovation along with contributions of civil society organizations and academia However most of all it will necessitate the empowerment of fishing people so that they can become active participants in decision making on matters where their well being and human rights are at stake By endorsing the SSF Guidelines states have committed themselves to support and facilitate this development This book asks whether states can successfully walk the talk and provides advice as to how they can do so The collection of case studies sets the platform for an interactive dialogue space for researchers policy makers civil society and small scale fishing communities to start the conversation about the monitoring and evaluation of the implementation of the SSF

Guidelines at local national regional and global levels An added value is that it helps add focus to our work as civil society activists involved in ensuring the application of the SSF Guidelines Naseegh Jaffer General Secretary World Forum of Fisher People WFFP This collection offers many ways in which institutions enabling small scale fisheries can protect and promote sustainability food security customary tenure self management and market access while fostering such benefits as ecosystem based management protected areas incorporation of local knowledge and poverty alleviation You will want to put this book in the hands of policy makers and practitioners immediately and for years to come Evelyn Pinkerton Professor Simon Fraser University Canada

Seascape Ecology Simon J. Charles William Martin, Jill A. Olin, Paola Lopez-Duarte, Brian Joseph Roberts, 2023-05-31 Amphibious Concepts at the Edge of the Sea Joerg Baumeister, Ioana C. Giurgiu, Daniela A. Ottmann, 2025-02-14 This book explores interfaces between land and sea and their geostrategic ecological urban productive indigenous legal historical and artistic dimensions The oceans comprising two thirds of the earth's surface were initially utilised mainly for transportation and fishing Today they serve diverse purposes such as supplying energy freshwater mineral resources supporting leisure activities and providing habitat Additionally the UN set up the first international agreement establishing Marine Protection Areas for a third of the sea to mitigate the growing use and exploitation The more interest in oceans territories increases the more the question arises about the beneficial evolution of their physical and legal boundaries What innovative amphibious concepts can be developed for the edge of the sea The book pushes the boundaries of current knowledge to provide a deeper insight into the

upcoming challenges and opportunities making it easier to apply the best strategies for a healthy future for both the ocean and humanity

Tropical Fish Otoliths: Information for Assessment, Management and Ecology Bridget S. Green, Bruce D. Mapstone, Gary Carlos, Gavin A. Begg, 2009-08-07 Techniques and theory for processing otoliths from tropical marine fish have developed only recently due to an historic misconception that these organisms could not be aged Otoliths are the most commonly used structures from which daily seasonal or annual records of a fish's environmental history are inferred and are also used as indicators of migration patterns home range spatial distribution stock structure and life history events A large proportion of projects undertaken on tropical marine organisms involve removal and processing of calcified structures such as otoliths statoliths or vertebrae to retrieve biological biochemical or genetic information Current techniques and principles have evolved rapidly and are under constant modification and these differ among laboratories and more particularly among species and within life history stages Tropical fish otoliths Information for assessment management and ecology is a comprehensive description of the current status of knowledge about otoliths in the tropics This book has contributions from leading experts in the field encompassing a tropical perspective on daily and annual ageing in fish and invertebrates microchemistry interpreting otolith microstructure and using it to back calculate life history events and includes a treatise on the significance of validating periodicity in otoliths

Functional Assessment of Wetlands E. Maltby, 2009-04-27 Wetlands perform functions that deliver benefits to society often referred to as ecosystem services These ecosystem services include water supply flood regulation water purification climate regulation biodiversity agriculture e.g. grazing land and amenity A functional approach to wetland assessment enables a holistic view to be taken of the wide range of services wetlands can provide The functional assessment procedures FAPs in this volume translate best available scientific knowledge into reasonable predictions of how component parts of wetlands function in different landscape contexts They can be used to indicate the potential and priorities for management options in such areas as flood control pollution reduction and biodiversity conservation Functional assessment enables the user to predict the functioning of a wetland area without the

need for comprehensive and expensive empirical research The FAPs therefore provide a methodology that can be used by both experts and non experts to assess wetland functioning relatively rapidly The volume includes an electronic version of the FAPs on CD which automates aspects of the assessment once the initial recording stage is completed It is anticipated that the FAPs will be used by a range of individuals or organisations concerned with wetland management who wish to gain a better understanding of the processes functions services or benefits and potential of the wetlands for which they have responsibility Provides a systematic methodology to evaluate how wetlands function Allows non experts to assess wetland functioning rapidly and cost effectively Automates aspects of the functional assessment through the accompanying CD ROM
