Kokhanovsky, 2010-08-05 Light scattering by densely packed inhomogeneous media is a particularly challenging optics problem In most cases only approximate methods are used for the calculations However in the case where only a small number of macroscopic scattering particles are in contact clusters or aggregates it is possible to obtain exact results solving Maxwell's equations Simulations are possible however only for a relatively small number of particles especially if their sizes are larger than the wavelength of incident light The first review chapter in Part I of this volume prepared by Yasuhiko Okada presents modern numerical techniques used

for the simulation of optical characteristics of densely packed groups of spherical particles In this case Mie theory cannot provide accurate results because particles are located in the near field of each other and strongly interact As a matter of fact Maxwell's equations must be solved not for each particle separately but for the ensemble as a whole in this case The author describes techniques for the generation of shapes of aggregates The orientation averaging is performed by a numerical integration with respect to Euler angles The numerical aspects of various techniques such as the T matrix method discrete dipole approximation the finite difference time domain method effective medium theory and generalized multi particle Mie solution are presented Recent advances in numerical techniques such as the grouping and adding method and also numerical orientation averaging using a Monte Carlo method are discussed in great depth *Modern Electronics*, 1989 *Popular Mechanics*, 1987-02 Popular Mechanics inspires, instructs and influences readers to help them master the modern world Whether it's practical DIY home improvement tips, gadgets and digital technology information on the newest cars or the latest breakthroughs in science PM is the ultimate guide to our high tech lifestyle **Photosynthesis and Production in a Changing Environment** D.O. Remote Sensing of Night-time Light Christopher Elvidge, Xi Li, Yuyu Zhou, Changyong Cao, Timothy A. Warner, 2021-08-09 Satellite images acquired at night provide a visually arresting perspective of the Earth and the human activities that light up the otherwise mostly dark Earth These night time light satellite images can be compiled into a geospatial time series that represent an invaluable source of information for both the natural and social sciences Night time light remote sensing has been shown to be particularly useful for a range of natural science and social science applications including studies relating

to urban development demography sociology fishing activity light pollution and the consequences of civil war Key sensors for these time series include the Defense Meteorological Satellite Program's Operational Linescan System DMSP OLS and the Suomi National Polar orbiting Partnership Satellite's Visible Infrared Imaging Radiometer Suite Day Night Band Suomi NPP VIIRS DNB An increasing number of alternative sources are also available including high spatial resolution and multispectral sensors This book captures key methodological issues associated with pre processing night time light data documents state of the art analysis methods and explores a wide range of applications Major sections focus on NPP VIIRS DNB processing inter calibration between NPP VIIRS and DMSP OLS applications associated with socio economic activities applications in monitoring urbanization and fishing activity monitoring The chapters in this book were originally published as a special issue of the International Journal of Remote Sensing     Popular Science ,1984-05 Popular Science gives our readers the information and tools to improve their technology and their world The core belief that Popular Science and our readers share The future is going to be better and science and technology are the driving forces that will help make it better     Forestry Applications of Airborne Laser Scanning Matti Maltamo,Erik Næsset,Jari Vauhkonen,2014-04-08 Airborne laser scanning ALS has emerged as one of the most promising remote sensing technologies to provide data for research and operational applications in a wide range of disciplines related to management of forest ecosystems This book provides a comprehensive state of the art review of the research and application of ALS in a broad range of forest related disciplines especially forest inventory and forest ecology However this book is more than just a collection of individual contributions it consists of a well composed blend of chapters dealing with fundamental methodological issues and contributions reviewing and illustrating the use of ALS within various domains of application The reviews provide a comprehensive and unique overview of recent research and applications that researchers students and practitioners in forest remote sensing and forest ecosystem assessment should consider as a useful reference text     SIMBIOS Project 2000 Annual Report Giulietta S. Advanced Deep Learning Strategies for the Analysis of Remote Sensing Images Yakoub Bazi,Edoardo Pasolli,2021-06-15 The rapid growth of the world population has resulted in an exponential expansion of both urban and agricultural areas Identifying and managing such earthly changes in an automatic way poses a worth addressing challenge in which remote sensing technology can have a fundamental role to answer at least partially such demands The recent advent of cutting edge processing facilities has fostered the adoption of deep learning architectures owing to their generalization capabilities In this respect it seems evident that the pace of deep learning in the remote sensing domain remains somewhat lagging behind that of its computer vision counterpart This is due to the scarce availability of ground truth information in comparison with other computer vision domains In this book we aim at advancing the state of the art in linking deep learning methodologies with remote sensing image processing by collecting 20 contributions from different worldwide scientists and laboratories The book presents a wide range of methodological advancements in the deep learning field that come with different applications

in the remote sensing landscape such as wildfire and postdisaster damage detection urban forest mapping vine disease and pavement marking detection desert road mapping road and building outline extraction vehicle and vessel detection water identification and text to image matching      *Military Intelligence* ,1988
