Standing on the Sun Christopher Meyer, 2012-01-31 For half a century the US has sat at the center of the global economic system and Western style capitalism has dominated Now it is no secret that the center of gravity is shifting The advanced economies that in 2000 consumed 75% of the world's output will by 2050 consume just 32% Meanwhile the emerging economies of the world Brazil India China and others will surge forward As these fast growing low income economies mature will they adopt the practices of the old guard Or will they make their own way and create the next prevailing version of capitalism What new opportunities will that create for firms around the world Standing on the Sun tackles these questions with fresh ideas and provocative examples Based on firsthand observations of companies defying capitalism's old rules yet prospering the authors outline new principles for commercial success Among them The obsession with return on equity gives way to more broad based measurements of success Adam Smith's invisible hand of the market is redeemed by the invisible handshake of collaborative networks Businesses take ownership of the impacts they now call externalities Those who need to understand the emerging shape of global capitalism will benefit from Standing on the Sun

Smart Leadership - Wise Leadership Christopher Steed, 2017-07-14 There is a strong link between organisational culture and profit after all a happy workforce is a productive workforce Yet a culture of inertia rather than innovation prevails in many organisations Wise leaders however know how to work with the grain of human value and worth harnessing it so as to add shared value both for the organisation and for the good of society So how can astute leaders set the right conditions for creativity and cultivate non economic goods such as time and relationships that make for a happy effective workforce The author proposes the notion of organisational culture as environments of value wherein inner value translated into external value is embedded within the triple bottom line and indeed an awareness of how an organisation is like a force field it exercises power and leaves a footprint This construct informs the emerging concept of Shared Value as requiring five literacies about Shareholder value and return for risk Value for the social environment linked to respect for the natural environment Inner value of those in the enterprise which when unlocked releases energies and adds value Nurture of non quantifiable qualities that promote human flourishing Understandings of how power relations distort the way organisations operate He clearly signposts the link between promoting an environment of value within which these literacies flourish and the added value for the organisation arising from such a culture *Humanizing Healthcare Reforms* Gerald A.

Arbuckle, Maria Theresa Ho, 2012-10-01 This book looks at the current turmoil facing contemporary healthcare systems worldwide which has resulted from relentless reorganization being imposed upon them and argues for a return to a values based approach to healthcare Writing from the unique and fresh perspective of social anthropology the author takes a highly logical approach to practice and emphasizes the importance of values such as compassion solidarity and social justice He stipulates that without being able to clearly identify the values and goals that unite its members healthcare organizations are unlikely to be able to meet the demands of the constant and varied pressures they face and explains how individuals at every level in healthcare can contribute to positive change within their organizations This much needed and highly accessible book will be essential reading for anyone interested in healthcare reform from clinicians and nurses to managers and policy makers as well as the interested reader **CIO.**, 2010-04 **Monetizing Innovation** Madhavan Ramanujam, Georg

Tacke, 2016-05-02 Surprising rules for successful monetization Innovation is the most important driver of growth Today more than ever companies need to innovate to survive But successful innovation measured in dollars and cents is a very hard target to hit Companies obsess over being creative and innovative and spend significant time and expense in designing and building products yet struggle to monetize them 72% of innovations fail to meet their financial targets or fail entirely Many companies have come to accept that a high failure rate and the billions of dollars lost annually is just the cost of doing business Monetizing Innovations argues that this is tragic wasteful and wrong Radically improving the odds that your innovation will succeed is just a matter of removing the guesswork That happens when you put customer demand and willingness to pay in the driver seat when you design the product around the price It s a new paradigm and that opens the
