Literature and the Environment George Hart, Scott Slovic, 2004-07-30. The phrase literature and environment only achieved popularity in recent decades yet writers dating back to the explorers of the 1500s and later such 19th century Romanticists as Thoreau have long been addressing environmental issues through literary expression. This volume introduces students and educators to the field by tracing the evolution of environmental writing in the United States. Chapters written by distinguished scholars offer new perspectives on important environmental issues guiding readers through 11 carefully selected literary works. Each chapter provides brief biographical information on the author, discussions of the work's structural, thematic and stylistic components and insights into the historical context that relates the work to relevant environmental issues. Each chapter concludes with information on works cited. The analyzed works cover a wide spectrum of literature and span nearly 100 years. Included are early writings such as Mary Austin's 1903 *The Land of Little Rain* and famous groundbreaking works such as Rachel Carson's *Silent Spring* 1962 and Gary Snyder's *Turtle Island* 1974. Also included are frequently assigned works of special interest to students such as *The Monkey Wrench Gang* 1975, *The Earthsea Trilogy* 1977 and *Ceremony* 1977. A list of selected further suggested readings completes the volume. Students of literature as well as educators looking for new ways to present social issues will find many ideas and much inspiration in this volume.

Bibliography of Natural History Travel Narratives Anne S. Troelstra, 2017-06-01. Anne Troelstra's fine bibliography is an outstanding and ground breaking work. He has provided the academic world with a long needed bibliographical record of human endeavour in the field of the natural sciences. The travel narratives listed here encompass all aspects of the natural world in every part of the globe but are especially concerned with its fauna, flora and fossil remains. Such eyewitness accounts have always fascinated their readers but they were never written solely for entertainment. Fragmentary though they often are, these narratives of travel and exploration are of immense importance for our scientific understanding of life on earth, providing us with a window on an ever changing and often vanishing natural world. Without such records of the past we could not track, document or understand the significance of changes that are so important for the study of zoogeography. With this book Troelstra gives us a superb overview of natural history travel narratives. The well over four thousand detailed entries ranging over four centuries and all major western European languages are drawn from a wide range of sources and include

both printed books and periodical contributions While no subject bibliography by a single author can attain absolute completeness Troelstra s work is comprehensive to a truly remarkable degree The entries are arranged alphabetically by author and chronologically by the year of first publication under the author s name A brief biography with the scope and range of their work is given for each author every title is set in context the contents including illustrations are described and all known editions and translations are cited In addition there is a geographical index that cross refers between authors and the regions visited and a full list of the bibliographical and biographical sources used in compiling the bibliography
