Time-Varying Network Optimization Dan Sha, C. K. Wong, 2007-05-05 Network flow optimization problems may arise in a wide variety of important fields such as transportation telecommunication computer networking financial planning logistics and supply chain management energy systems etc Significant and elegant results have been achieved on the theory algorithms and applications of network flow optimization in the past few decades See for example the seminal books written by Ahuja Magnanti and Orlin 1993 Bazaraa Jarvis and Sherali 1990 Bertsekas 1998 Ford and Fulkerson 1962 Gupta 1985 Iri 1969 Jensen and Barnes 1980 Lawler 1976 and Minieka 1978 Most network optimization problems that have been studied up to date are however static in nature in the sense that it is assumed that it takes zero time to traverse any arc in a network and that all attributes of the network are constant without change at any time Networks in the real world are nevertheless time varying in essence in which any flow must take a certain amount of time to traverse an arc and the network structure and parameters such as arc and node capacities may change over time In such a problem how to plan and control the transmission of flow becomes very important since waiting at a node or travelling along a particular arc with different speed may allow one to catch the best timing along his path and therefore achieve his overall objective such as a minimum overall cost or a minimum travel time from the origin to the destination Time-Varying Network Optimization Cai, 2009-09-01

Proceedings of 2021 5th Chinese Conference on Swarm Intelligence and Cooperative Control Zhang Ren, Mengyi Wang, Yongzhao Hua, 2022-07-29 This book includes original peer reviewed research papers from the 2021 5th Chinese Conference on Swarm Intelligence and Cooperative Control CCSICC2021 held in Shenzhen China on January 19-22 2022 The topics covered include but are not limited to reviews and discussions of swarm intelligence basic theories on swarm intelligence swarm communication and networking swarm perception awareness and location swarm decision and planning cooperative control cooperative guidance swarm simulation and assessment The papers showcased here share the latest findings on theories algorithms and applications in swarm intelligence and cooperative control making the book a valuable asset for researchers engineers and university students alike **Non-centralized Optimization-Based Control Schemes for Large-Scale Energy Systems** W. Wicak Ananduta, 2021-12-11 This book describes the development of innovative non

centralized optimization based control schemes to solve economic dispatch problems of large scale energy systems. Particularly it focuses on communication and cooperation processes of local controllers which are integral parts of such schemes. The economic dispatch problem which is formulated as a convex optimization problem with edge based coupling constraints is solved by using methodologies in distributed optimization over time varying networks together with distributed model predictive control and system partitioning techniques. At first the book describes two distributed optimization methods which are iterative and require the local controllers to exchange information with each other at each iteration. In turn it shows that the sequence produced by these methods converges to an optimal solution when some conditions which include how the controllers must communicate and cooperate are satisfied. Further it proposes an information exchange protocol to cope with possible communication link failures. Finally the proposed distributed optimization methods are extended to the cases with random communication networks and asynchronous updates. Overall this book presents a set of improved predictive control and distributed optimization methods together with a rigorous mathematical analysis of each proposed algorithm. It describes a comprehensive approach to cope with communication and cooperation issues of non centralized control schemes and show how the improved schemes can be successfully applied to solve the economic dispatch problems of large scale energy systems.

Advances in Artificial Intelligence, Computation, and Data Science Tuan D. Pham,Hong Yan,Muhammad W. Ashraf,Folke Sjöberg,2021-07-12 Artificial intelligence AI has become pervasive in most areas of research and applications. While computation can significantly reduce mental efforts for complex problem solving, effective computer algorithms allow continuous improvement of AI tools to handle complexity in both time and memory requirements for machine learning in large datasets. Meanwhile data science is an evolving scientific discipline that strives to overcome the hindrance of traditional skills that are too limited to enable scientific discovery when leveraging research outcomes. Solutions to many problems in medicine and life science which cannot be answered by these conventional approaches are urgently needed for society. This edited book attempts to report recent advances in the complementary domains of AI computation and data science with applications in medicine and life science. The benefits to the reader are manifold as researchers from similar or different fields can be aware of advanced developments and novel applications that can be useful for either immediate implementations or future scientific pursuit.

Features Considers recent advances in AI computation and data science for solving complex problems in medicine, physiology, biology, chemistry, and biochemistry. Provides recent developments in three evolving key areas and their complementary combinations: AI computation and data science. Reports on applications in medicine and physiology including cancer, neuroscience, and digital pathology. Examines applications in life science including systems biology, biochemistry, and even food technology. This unique book representing research from a team of international

contributors has not only real utility in academia for those in the medical and life sciences communities but also a much wider readership from industry science and other areas of technology and education Time-varying System Theory and Computational Modeling Alle-Jan van der Veen,1993 Proceedings of the First Asian Control Conference, Tokyo Metropolitan Institute of Technology, Tokyo, July 27-30, 1994 ,1994 Scientific and Technical Aerospace Reports ,1972
