United States Navy Aircraft Since 1911 Gordon Swanborough, Peter M. Bowers, 1990 *United States Navy Aircraft since 1911* has been completely revised and updated and like the earlier editions will become the standard reference work covering all the aircraft of the US Navy Marine Corps and Coast Guard *United States Marine Corps Aircraft Since 1913* E.R. Johnson, Lloyd S. Jones, 2018-04-17 Among the world's military air arms United States Marine Corps Aviation occupies a unique tactical niche As the air component of a combined arms expeditionary force it exists primarily to support Marine combat forces on the ground in their amphibious assault mission From the Banana Wars of the 1920s to the present day War on Terror Marine aviation has undergone a lengthy fine tuning process not only in terms of warfare doctrines and tactics but also in the types of aircraft needed to accomplish the mission This comprehensive survey provides the history technical specifications drawings and photographs of every type of fixed and rotary wing aircraft used by Marine Air from its origins prior to World War I up to current operations **United States Naval Aviation, 1919-1941** E.R. Johnson, 2014-01-10 Within six months of the devastating attack on Pearl Harbor the U S Navy had checked the Japanese military advance in the Pacific to the extent that the United States could return to its original Defeat Germany First strategy That the Navy was able to accomplish this feat with only six fleet aircraft carriers and little more than 1 000 combat aircraft was not sheer luck but the culmination of more than two decades of determined preparation This thorough study with detailed drawings and photographs explains and illustrates the trial and error process which went into developing the aircraft airships and ships of the interwar period The critical factors that shaped Naval Aviation after World War I naval treaties fleet tactics government programs leadership and organization as well as the emergence of Marine Corps and Coast Guard aviation are discussed in depth **American Military Transport Aircraft Since 1925** E.R. Johnson, Lloyd S. Jones, 2013-04-06 Without the support of airlift the modern American military machine would be brought to a standstill Since World War II beginning with the Cold War and continuing up to the present day the U S armed forces have come increasingly to rely upon airlift for mobility The power to rapidly move and thereafter support a military operation anywhere in the world at any time has become a foundational element of American defense policy This work provides the reader with a comprehensive historical survey including technical specifications drawings and photographs of each type of fixed wing aircraft used by U S military forces over a nearly 90 year period to carry out the airlift mission *American Attack Aircraft Since 1926* E.R. Johnson, 2012-05-28 This book provides a concise historical survey of the various types of aircraft used by the United States Army Air Corps Army Air Forces and Air Force and the Navy and Marine Corps to accomplish air attack missions since 1926 The text covers four types of fixed wing aircraft designated attack aircraft light medium and tactical bombers fighter bombers and adapted attack aircraft Reports on individual aircraft types include the aircraft's original military requirements production history and operational record usually accompanied by photographs illustrations and technical specifications Four appendices detail

aircraft designations and nomenclature used throughout the military the organizational structure of various military air units aircraft designs that never made it into official service and the evolution of attack aircraft weapons and tactics United States Naval History United States. Department of the Navy. Library,1969 American Flying Boats and Amphibious Aircraft E.R. Johnson,2016-03-29 This work is a comprehensive heavily illustrated history of the many flying boats and amphibious aircraft designed and built in the United States It is divided into three chronological sections the early era 1912 1928 the golden era 1928 1945 and the post war era 1945 present with historical overviews of each period Within each section individual aircraft types are listed in alphabetical order by manufacturer or builder with historical background technical specifications drawings and one or more photographs Appendices cover lesser known flying boat and amphibian types as well as various design concepts that never achieved the flying stage Dictionary of American Naval Aviation Squadrons Roy A. Grossnick,Naval Historical Center (U.S.),1995 *The U.S. Combat Aircraft Industry, 1909-2000* Mark A. Lorell,2003-10-29 Drawing on primary and secondary sources on the aircraft industry this report provides a brief survey of industry structure innovation and competition in the U S fixed wing combat aircraft industry from its earliest days to the present It supports a much larger research effort examining the future of the structure innovation and competition of the U S military aircraft industrial base that responds to congressional concerns about that future **American Military Training Aircraft** E.R. Johnson,2015-03-04 The U S did not become the world s foremost military air power by accident The learning curve World War I World War II the Korean War the Vietnam War the Gulf War and more recently the war on terror has been steep While climbing this curve the U S has not only produced superior military aircraft in greater numbers than its foes but has in due course out trained them too This book provides a comprehensive historical survey of U S military training aircraft including technical specifications drawings and photographs of each type of fixed and rotary wing design used over a 98 year period to accomplish the first step of the learning process the training of pilots and aircrews **US Naval Aviation, 1898-1945** Leo Marriott,2021-06-09 This pictorial history tells the story of US naval aviation from its early beginnings in the 1920s to its dominance in the Pacific theater of WWII The Japanese attack on Pearl Harbor sank or crippled almost all of the battleships in the US Navy s Pacific Fleet But the fleet s aircraft carriers survived and soon demonstrated the power of US naval aviation Thanks to pioneering technology and far sighted pre war policy the US Navy had the necessary ships aircraft and crews to turn the tide of the Pacific war With more than 200 rare photographs Leo Marriott traces the growth of US naval aviation from the flimsy seaplanes of the first years of the twentieth century to the mighty armadas that challenged those of the Japanese and after the carrier battles at Coral Sea and Midway led the advance across the Pacific Marriott puts special focus on the navy s first aircraft carriers of the 1920s the tremendous progress made in the decades between the wars in tactics and strategy and the innovative design of ships and aircraft themselves *Dictionary of American Naval Fighting Ships: Historical sketches* ,1970 **Dictionary of American Naval Fighting Ships** United States. Technological Innovation and the Rise of Aviation, 1903-1941 Charles J. Gross,2024-12-30 This book provides an overview of American aviation from 1903 to 1941 covering major developments in aviation technology It focuses on the role of the military and selected firms Under the fiscal constraints imposed by the post war military drawdown and the Great Depression the US military sacrificed quantity aircraft procurement for gains in quality Until foreign powers began huge rearmament programs US military aircraft were some of the most advanced in the world They held numerous international performance records before the US fell behind other powers that had gone on a war footing It offers new insights into the contributions of immigrants and foreign technologies to American aviation while examining the relationship between the government and the aviation industry It also highlights factors that enabled America to field some of the war s most advanced warplanes which ultimately helped win the Second World War **Striking the Hornets' Nest** Geoffrey L. Rossano,Thomas Wildenberg,2015-10-15 Striking the Hornets Nest provides the first extensive analysis of the Northern Bombing Group NBG the Navy s most innovative aviation initiative of World War I and one of the world s first dedicated strategic bombing programs Very little has been written about the Navy s aviation activities in World War I and even less on the NBG Standard studies of strategic bombing tend to focus on developments in the Royal Air Force or the U S Army Air Service This work concentrates on the origins of strategic bombing in World War I and the influence this phenomenon had on the Navy s future use of the airplane The NBG program faced enormous logistical and personnel challenges Demands for aircraft facilities and personnel were daunting and shipping shortages added to the seemingly endless delays in implementing the program Despite the impediments the Navy and Marine Corps triumphed over organizational hurdles and

established a series of bases and depots in northern France and southern England in the late summer and early fall of 1918. Ironically by the time the Navy was ready to commence bombing missions the German retreat had caused abandonment of the submarine bases the NBG had been created to attack. The men involved in this program were pioneers overcoming major obstacles only to find they were no longer needed. Though the Navy rapidly abandoned its use of strategic bombing after World War I their brief experimentation directed the future use of aircraft in other branches of the armed forces. It is no coincidence that Robert Lovett the young Navy reserve officer who developed much of the NBG program in 1918 spent the entire period of World War II as Assistant Secretary of War for Air where he played a crucial role organizing and equipping the strategic bombing campaign unleashed against Germany and Japan. Rossano and Wildenberg have provided a definitive study of the NBG a subject that has been overlooked for too long.

US Naval Aviation, 1945-2003 Leo

Marriott, 2023-07-30 In this the highly illustrated second volume of his history of US naval aviation Leo Marriott takes the reader through the extraordinary developments in design and capability that transformed American aircraft and aircraft carriers after the Second World War and he describes the succession of conflicts in which they were deployed. Increasingly advanced jets replaced propeller driven aircraft and nuclearpowered carriers allowed the US Navy to project American military power across the world. As the many remarkable photographs in this book show wherever naval aviation was involved it played a crucial role especially in the wars in Korea and Vietnam. The vessels built in the 1940s to fight in the war against Japan gave way to a new generation of super carriers. Supersonic fighters and strike aircraft entered service the F 8 Crusaders and F 4 Phantoms of the Vietnam era then the F 14 Tomcat F A 18 Hornet and S 3 Viking of more recent times. Carrier based helicopters became more important first for search and rescue missions then for anti submarine warfare and for landing assault forces. Throughout this period of the Cold War the US Navy's carriers and aviation served to demonstrate American power worldwide and to counter the threat represented by the Soviet Union's challenge to US mastery of the seas.

War Plan Orange Edward S Miller, 2007-03-01 Based on twenty years of research in formerly secret archives this book reveals for the first time the full significance of War Plan Orange the U S Navy's strategy to defeat Japan formulated over the forty years prior to World War II.

Lighter Than Air Guy Warner, 2016-06-30 Neville Florian Usborne entered the Royal Navy as a cadet in 1897. In the years between him joining up and the outbreak of the First World War he engaged in a huge number of enterprises and endeavours. Praise and respect garnered in accordance with his achievements all helped to establish his reputation in later years as an irreplaceable pioneer and a leading light of early British airship design. His fertile imagination and enterprising spirit fused to form a dynamic personality able in wartime to draw up countless schemes in an effort to outwit the enemy. His chief task during the Great War was to dream up new tactics and designs to combat the Zeppelin menace perceived as one of the most damaging threats of the entire conflict. He was also deeply involved in the design of the very successful SS and Coastal Class airships indeed during 1915 he was actually appointed Inspector

Commander of Airships at the Admiralty Unfortunately his illustrious career was destined to be cut short in 1916 when he was killed testing a prototype of one of his own designs This new biography seeks to shine a light on an overlooked pioneer of early aviation and it does so in entertaining and reverential style The importance of Usborne the pioneer is made plain as one of his contemporaries commented upon his death No one can talk of the early days of British airship design without mention of his name and work A personality was lost on that February day which was irreplaceable
