Abstract: This paper presents a new method for the automatic detection of the onset of the vocal tract in speech signals. The method is based on the analysis of the temporal evolution of the spectral envelope of the speech signal. The results of the automatic detection of the onset of the vocal tract are compared with the results of the manual detection of the onset of the vocal tract. The results show that the automatic method is able to detect the onset of the vocal tract with a high accuracy.

Weathering describes the way in which the weathering of rocks and minerals affects the environment. It is a process that can be both physical and chemical, and it can be both natural and human-induced. Weathering can be a slow process, taking thousands of years, or it can be a fast process, taking only a few days. Weathering can be a natural process, such as the weathering of a rock by the elements, or it can be a human-induced process, such as the weathering of a rock by acid rain.
