Biology and Nursing Aptitude *Laboratory Guide to Vertebrate Dissection for Students of Anatomy* Arthur Beeny
Appleton,1929 As its title indicates this is a book for use in a practical comparative anatomy course It is intended for a
somewhat unusual class of student and consequently its contents outlook and method of treatment are unlike those of the
standard texts in this subject As stated in the preface it is assumed that the student has already done a course in elementary
zoology including the usual verte brate types and has also examined in more detail a mammal Unless this mammal were man
a number of comparisons in the book would be missed To obtain full benefit from it the student should obviously have taken
the preliminary medical studies including a fair amount of human anatomy This is not meant to imply that the student of
advanced zoology cannot get many useful hints and fresh points of view from its pages he undoubtedly can The types treated
in a series of regional dissections are the lamprey the dogfish *Squalus Necturus* the lizard and the dog As it is intended for
assistance in dissection information regarding osteology and the details of the central nervous system have been purposely
omitted and conversely the muscles are treated somewhat more fully than is customary Study Guide NTSE (MAT + SAT)
