Unified Introduction to Linear Algebra Alan Tucker,1988 *Quasidifferential Calculus* Vladimir Fedorovich
Dem'ina,Laurence Charles Ward Dixon,1986 The papers in the present study deal with quasidifferentiable functions i e
functions which are directionally differentiable and such that at each fixed point the directional derivative as a function of
direction can be expressed as the difference of two convex positively homogeneous functions It turns out that
quasidifferentiable functions form a linear space closed with respect to all differentiable operations and very importantly
with respect to the operations of taking the point wise maximum and minimum Many properties of these functions have been
discovered and we are now in a position to speak about Quasidifferential Calculus But the importance of quasidifferentiable
functions is not simply based on the results obtained so far We can foresee a much greater role for these functions since as
far as the first order properties are concerned all directionally differentiable Lipschitzian functions can be approximated by
quasidifferentiable functions This is due to the fact that the directional derivative of any directionally differentiable
Lipschitzian function can be approximated to within any given accuracy by the difference of two convex positively
homogeneous functions This Study reflects the state of the art of Quasidifferential Calculus The original idea of simply
publishing English translations of a number of Russian papers on the subject was immediately rejected by the Editor in Chief
Professor R W Cottle we are now grateful for this decision since the authors obtained new results thus leading to a much
greater understanding of the subject **The Mathematics Teacher** ,2006 Mathematical Programming Study ,1986
